QUESTIONS PRESENTED

1. Whether the Fifth Circuit correctly held, in direct conflict with the Second Circuit and district courts in seven other circuits and in conflict with the principles of *Basic v. Levinson*, 485 U.S. 224 (1988), that plaintiffs in securities fraud actions must satisfy not only the requirements set forth in *Basic* to trigger a rebuttable presumption of fraud on the market, but must also establish loss causation at class certification by a preponderance of admissible evidence without merits discovery.

2. Whether the Fifth Circuit improperly considered the merits of the underlying litigation, in violation of both *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974), and Federal Rule of Civil Procedure 23, when it held that a plaintiff must establish loss causation to invoke the fraud-on-the-market presumption even though reliance and loss causation are separate and distinct elements of security fraud actions and even though proof of loss causation is common to all class members.

RULES 14.1(b) AND 29.6 STATEMENTS

Pursuant to Rule 14.1(b), Petitioner states that the Erica P. John Fund, Inc. was known as Archdiocese of Milwaukee Supporting Fund, Inc. until February 11, 2009 when it changed its name. Petitioner further states that the only parties to the proceeding whose judgment is sought to be reviewed other than the individuals and entities identified in the caption are the following individual Plaintiffs:

1. Laborers National Pension Fund;
2. Plumbers and Pipefitters National Pension Fund;
3. City of Dearborn Heights Act 345 Police & Fire Retirement System;
4. John Kimble; and
5. Lt. Colonel Ben Alan Murphey.

Pursuant to Rule 29.6, Petitioner states that it has no parent corporation and no stock.

OPINIONS BELOW

The opinion of the court of appeals affirming the district court's denial of class certification is reported at 597 F.3d 330. The district court's opinion denying class certification is unreported.

JURISDICTION

The judgment of the court of appeals was entered on February 12, 2010. This Court's jurisdiction is invoked under 28 U.S.C. § 1254(1).

RULES AND STATUTORY PROVISIONS INVOLVED

Federal Rule of Civil Procedure 23 is set out in the Appendix (Pet. App.) at 141a-49a.

Section 78u-4(b)(4) of the Private Securities Litigation Reform Act of 1995 (PSLRA), 15 U.S.C. § 78u-4 *et seq.*, is entitled "Loss causation" and states: "In any private action arising under this chapter, the plaintiff shall have the burden of proving that the act or omission of the defendant alleged to violate this chapter caused the loss for which the plaintiff seeks to recover damages."

STATEMENT

In *Basic Inc. v. Levinson*, 485 U.S. 224 (1988), this Court adopted the fraud-on-the-market theory for demonstrating reliance in securities class actions, set forth the prerequisites for invoking that presumption, and established how that presumption may be rebutted. Because it is impossible to establish reliance as to misrepresentations on a class-wide basis without such a presumption, the fraud-on-the-market presumption is essential to virtually every successful securities class action concerning misrepresentations. The United States Court of Appeals for the Fifth Circuit, alone of all the circuits, holds that complying with the requirements set forth in *Basic*, which this Court endorsed in *Stoneridge Investment Partners LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008), does not suffice to invoke the fraud-on-the-market presumption. Rather, a plaintiff in the Fifth Circuit must also establish loss causation by a preponderance of the evidence, even though proof of loss causation will be common to all class members and unnecessarily implicates the merits of the underlying claim.

To establish loss causation at class certification, the Fifth Circuit requires plaintiffs not simply to allege but rather to demonstrate by a preponderance of the evidence that the defendants' misrepresentations were "designed to defraud." Pet. App. 122a [hereinafter *AMS Fund*]. The Fifth Circuit stated in an earlier case that undergirds its decision here that plaintiffs may establish loss causation at class certification without merits discovery because the necessary "'proof' is drawn

from public data and public filings." *Oscar Private Equity Invs. v. Allegiance Telecom Inc.*, 487 F.3d 261, 267 (5th Cir. 2007). That was before the Fifth Circuit further tightened the requirements for demonstrating loss causation in *AMS Fund*, effectively requiring proof of scienter and imposing a virtually unattainable standard, in derogation of this Court's repeated recognition of the importance of private securities actions to help enforce federal securities law.

No other court has followed the rule created by the Fifth Circuit, which has established an exceedingly high standard for certifying a securities class action. The Second Circuit in *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474, 483 (2d Cir. 2008), held plaintiffs need not show loss causation to invoke the fraud-on-the-market presumption, and numerous district courts in seven other circuits have also rejected the Fifth Circuit's holding. Because the district court in this case stated that it would have certified the proposed class but for the Fifth Circuit's unique rule, this case squarely raises the question of the requisite showing to invoke or rebut the fraud-on-the-market presumption, important issues that will recur repeatedly in the Fifth Circuit and in other courts as well.

The conflict between the Fifth Circuit and the Second Circuit (and district courts in other circuits) is direct, recurring, and important. Regardless of whether the Fifth Circuit or the Second Circuit rule is right, the conflict should be resolved.

A. Factual & Procedural Background

This case is a securities class action brought against the Halliburton Company ("Halliburton") and David J. Lesar, its former president and chief operating officer (collectively, "Halliburton" or "Defendants"), on behalf of all purchasers of Halliburton's common stock. The Complaint alleges that during the class period, Defendants violated §§ 10(b) and 20(a) of the Securities Exchange Act of 1934 and SEC Rule 10b-5 by deliberately falsifying Halliburton's financial results and deliberately misleading the public about its financial condition, particularly with respect to Halliburton's liability for asbestos claims and the adequacy of its asbestos reserves, the probability of collecting revenue on unapproved claims on fixed-price construction contracts, and the benefits of Halliburton's merger with Dresser Industries.

After the district court denied Halliburton's motion to dismiss the fourth amended complaint, and after the district court subsequently denied Halliburton's motion for reconsideration following this Court's ruling in *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308 (2007), Lead Plaintiff on September 17, 2007 filed a motion to certify a class of all persons and entities who purchased or otherwise acquired common stock of Halliburton during the class period—June 3, 1999 to December 7, 2001. On November 4, 2008, the district court denied the motion, finding that Lead Plaintiff failed to prove loss causation—a substantive element of a

securities fraud action[1]—by a preponderance of the evidence. Pet. App. 4a. The district court based its holding on the Fifth Circuit's decision in *Oscar*, 487 F.3d at 265, which held that plaintiffs must "establish loss causation in order to trigger the fraud-on-the-market presumption" of reliance. The district court said: "Absent this requirement, the Court would certify the class. However, having considered the parties' extensive briefing, oral argument, and the applicable law, the Court is of the opinion that Plaintiffs have not demonstrated loss causation as to any of their claims." Pet. App. 4a. The district court found requiring proof of loss causation imposes an "extremely high" bar but said it had to follow Fifth Circuit law. *Id.* at 7a ("This approach to loss causation imposes an exceedingly high burden on Plaintiffs at an early stage of the litigation . . . . This Court is bound to follow the Fifth Circuit's precedent, but notes that the bar is now extremely high for all plaintiffs seeking class certification in securities litigation.").

On an interlocutory appeal, the Fifth Circuit affirmed the denial of class certification. *Id.* at 122a. While the court did not endorse *Oscar*, it stated it was bound by the decision: "Plaintiff contends that our precedent, specifically the requirement of *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261, 269 (5th Cir. 2007), that class plaintiffs prove loss causation at the class certification stage, is contrary to Supreme Court and sister circuit precedent. Plaintiff may not assail

---

[1] *Dura Pharm., Inc. v. Broudo*, 544 U.S. 336, 341-42 (2005).

Oscar as wrongly decided, as we are bound by the panel decision." *Id.* at 113a n.2.[2] Citing *Oscar*, the court held that plaintiff had to show an actual effect on the stock price. "In order to obtain class certification on its claims, Plaintiff was required to prove loss causation, i.e., that the corrected truth of the former falsehoods actually caused the stock price to fall and resulted in the losses." *Id.* at 113a; *see also id.* at 115a ("Plaintiff must show that an alleged misstatement 'actually moved the market.'"). This burden is justified because "the main concern when addressing the fraud-on-the-market presumption of reliance is whether allegedly false statements actually inflated the company's stock price." *Id.* at 116a.

The Fifth Circuit further held that in a case such as this one in which the plaintiff seeks to establish loss causation through the effect of a corrective disclosure on the stock price, "plaintiffs must prove the corrective disclosure shows the misleading or deceptive nature of the prior positive statements." *Id.* at 121a. Thus, "[w]hen confronted with allegedly false financial predictions and estimates [at class certification], the district court must decide whether the corrective disclosure more probably than not shows that the original estimates or predictions were designed to defraud." *Id.* at 122a. The court explained, "the truth revealed by the corrective disclosure must show that the defendant more likely than not misled or deceived the market with earnings misstatements that

---

[2] Certiorari was not sought in *Oscar*.

inflated the stock price and are actionable." *Id.* The Fifth Circuit affirmed the district court's ruling because it "conclude[d] that Plaintiff ha[d] failed to meet this court's requirements for proving loss causation at the class certification stage." *Id.* at 136a.[3]

B. The History of the Fifth Circuit's Requirement of Proof of Loss Causation at Class Certification

In *Oscar*, the Fifth Circuit announced a new and unprecedented requirement for plaintiffs seeking class certification in securities actions. The Fifth Circuit held that a named plaintiff must establish loss causation by "a preponderance of all admissible evidence" in order to benefit from the fraud-on-the-market presumption of reliance, *id.* at 269: "Essentially, we require plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption." *Id.* at 265 (footnotes omitted).

---

[3] The Fifth Circuit held that Lead Plaintiff failed to establish loss causation as to defendants' statement regarding asbestos liability, Pet. App. 124a-29a, their accounting for revenue on unapproved claims, *id.* at 132a-36a, and their projections regarding the benefits of Halliburton's merger with Dresser, *id.* at 129a-32a. The sole basis for the court's ruling was its holding that Lead Plaintiff failed to establish loss causation, and the various, alleged deficiencies the court discussed all concern loss causation. For instance, the Fifth Circuit stated Lead Plaintiff failed to disaggregate the effect of culpable and non-culpable negative news, *see id.* at 134a ("failed to differentiate" impact of "non-culpable" news from "any allegedly culpable information"), but such disaggregation is only necessary to prove loss causation.

The Fifth Circuit claimed its holding was consistent with *Basic*, stating:

> We have observed that *Basic* "allows each of the circuits room to develop its own fraud-on-the-market rules." This court has used this room-in *Finkel*, *Abell*, *Nathenson*, and *Greenberg* to tighten the requirements for plaintiffs seeking a presumption of reliance. We now require more than proof of a material misstatement; we require proof that the misstatement actually moved the market.

Id. at 264-65. *Basic*, however, does not state that the courts of appeals are free to develop their own approach, and no circuit other than the Fifth Circuit has developed its own fraud-on-the-market rules.

In *Oscar*, the Fifth Circuit noted its concern regarding the "power of the fraud on the market doctrine," which, the court states, facilitates an "extraordinary aggregation of claims." *Id.* at 266-67. The court said it could not "ignore the *in terrorem* power of certification, continuing to abide the practice of withholding until 'trial' a merit inquiry central to the certification decision, and failing to insist upon a greater showing of loss causation to sustain certification." *Id.* at 267.[4]

---

[4] At oral argument in this case, Judge Reavley, author of the court's *AMS Fund* opinion, said to plaintiff's counsel: "You understand how class certifications are unpopular with this Circuit?" In a subsequent exchange, Judge Reavley said: "Well, we did away with Rule 23 virtually." Transcript of Oral Argument, *available at* http://www.ca5.uscourts.gov/

Doctrinally, the court explained its requirement that plaintiffs must establish loss causation at class certification this way:

> The assumption that every material misrepresentation will move a stock in an efficient market is unfounded, at least as market efficiency is presently measured. There are two additional explanations, besides immateriality, for why a misrepresentation might fail to effect the stock price, both relevant to classwide reliance. First, it might be that even though the market for the defendant's shares has been demonstrated efficient by the usual indicia, the market is actually inefficient with respect to the particular type of information conveyed by the material misrepresentation, *i.e.* analysts and market makers do poorly at digesting line-count information. Thus our approach gives effect to information-type inefficiencies, recognizing that "the market price of a security will not be uniformly efficient as to all types of information." A second possible explanation for a misrepresentation's failure to move the market is that the market was strong-form efficient with respect to that type of information, i.e., due to insider trading, the restated line count was reflected by the stock price well before the 4Q01

OralArgRecordings/08/08-11195_12-1-2009.wma, at 1:58 and 2:17.

> corrective disclosure. Both explanations resist application of the semi-strong efficient-market hypothesis, the theory on which the presumption of classwide reliance depends. This court honors both theory and precedent in requiring plaintiffs to demonstrate loss causation before triggering the presumption of reliance.

Id. at 269-70. The court cited no evidence that the relevant market in that case was inefficient or strong-form efficient. Based on a theoretical possibility of a limitation on the efficient market doctrine, the Fifth Circuit radically altered the requirements for invoking the fraud-on-the-market presumption. Instead of stating that a defendant could rebut the presumption by presenting evidence that the market in question was inefficient or strong-form efficient, the court required plaintiffs to establish loss causation, an element of a securities action that is distinct from reliance (or the efficiency of the market) and therefore does not impact the fraud-on-the-market analysis.

The court found that loss causation could be demonstrated at class certification because "[l]ittle discovery from defendants is demanded by the fraud-on-the-market regimen. Its 'proof' is drawn from public data and public filings . . . ." *Id.* at 267. The standard enunciated in *Oscar* turned on whether the corrective disclosure was "related" to the prior misstatement. *Id.* at 266 (To establish loss causation, a plaintiff must prove "(1) that the negative 'truthful' information causing the decrease in price [was] related to an allegedly false, non-

confirmatory positive statement made earlier and (2) that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline." (quoting *Greenberg v. Crossroad Sys., Inc.*, 364 F.3d 657, 666 (5th Cir. 2004))).

In the *AMS Fund* case, the Fifth Circuit imposed a much stiffer standard, holding that "plaintiffs must prove the corrective disclosure shows *the misleading or deceptive nature of the prior positive statements*" and that "the corrective disclosure more probably than not shows that the original estimates or predictions were *designed to defraud*." Pet. App. 121a-22a (emphasis added). The Fifth Circuit failed to explain how it is possible for plaintiffs—without merits discovery—to make by such an evidentiary showing, which effectively requires proof of scienter.[5]

---

[5] In *Alaska Electrical Pension Fund v. Flowserve Corp.*, 572 F.3d 221 (5th Cir. 2009), the court addressed "the definition of relevant corrective information for purposes of assessing loss causation." *Id.* The opinion was authored by Justice O'Connor, sitting by designation pursuant to 28 U.S.C. § 294(a). The correctness of *Oscar*'s holding was not before the court and in any event, the panel was bound by *Oscar*. The court rejected the contention that "a fraud causes a loss only if the loss follows a corrective statement that specifically reveals the fraud." *Id.* at 230. The *AMS Fund* decision, handed down after *Alaska Electrical Pension Fund*, set a considerably more demanding test.

REASONS FOR GRANTING THE PETITION

A. This Court Should Grant Certiorari Because the Fifth Circuit's Holding in *AMS Fund* Directly Conflicts with the Second Circuit and Lower Courts in Seven Other Circuits, Conflicts with the Principles of *Basic v. Levinson*, and Sets an Extremely High and Erroneous Standard

The Fifth Circuit's holding improperly imposes a substantial and unprecedented burden on plaintiffs—demonstrating loss causation at class certification. The Fifth Circuit's holding has been squarely rejected by the Second Circuit and by district courts in seven other circuits as a misreading of *Basic*. The Fifth Circuit's holding, which establishes an exceedingly high bar and in *AMS Fund*, a virtually unattainable bar, further conflicts with the principles of *Basic* by eviscerating *Basic*'s rebuttable presumption of reliance in favor of plaintiffs who demonstrate that the stock in question trades on an efficient market.

i. This Court Should Grant Certiorari to Resolve a Circuit Split Between the Second and Fifth Circuits and to Provide Guidance for the District Courts in Other Circuits that Have Repeatedly Had to Address the Correctness of the Fifth Circuit's Holding

In *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474 (2d Cir. 2008), the Second Circuit held that plaintiffs in securities class actions need not show that an alleged misrepresentation actually moved the market in order to invoke the fraud-on-the-market presumption. *Id.* at 483 ("[P]laintiffs do not bear the burden of showing an impact on price."). This holding directly conflicts with the holding in *AMS Fund* where the court declared: "Plaintiff must show that an alleged misstatement 'actually moved the market.' Thus, 'we require plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption.'" Pet. App. 115a (quoting *Oscar*, 487 F.3d at 265); *see In re Am. Int'l Group, Inc. Sec. Litig.*, 265 F.R.D. 157, 181 (S.D.N.Y. 2010) (*Salomon* expressly rejects *Oscar*); *In re Boston Scientific Corp. Sec. Litig.*, 604 F. Supp.2d 275, 285-86 (D. Mass. 2009) (same).

In *Salomon*, the Second Circuit addressed "whether plaintiffs alleging securities fraud against analysts must make a heightened evidentiary showing in order to benefit from the fraud-on-the-market presumption of *Basic Inc. v. Levinson*." 544 F.3d at 476. Defendants argued that "the district court erred by not placing the burden on plaintiffs to prove that the alleged misrepresentations 'moved the market,' i.e., had a measurable effect on the stock price." *Id.* at 482. Defendants also argued that the concept of 'materiality' in *Basic*, which plaintiffs much demonstrate for the fraud-on-the-market presumption to apply, refers to a 'material affect on the market price.'" *Id.*

The court rejected defendants' argument as "a misreading of *Basic*," *id.* at 482, and held that the requirements outlined in *Basic* are "all that is needed to warrant the presumption," *id.* at 481. According to the court, "[t]he point of *Basic* is that an effect on market price is *presumed* based on the materiality of the information and a well-developed market's ability to readily incorporate that information into the price of securities." *Id.* Thus, "the burden of showing that there was no price impact is properly placed on defendants at the rebuttal stage." *Id.*[6] If plaintiffs need not establish loss causation at class certification against third parties such as analysts, *a fortiori* they do not have to make such a showing against a company or its executives.[7]

---

[6] The *Salomon* court added that "[t]he law guards against a flood of frivolous or vexatious lawsuits against third-party speakers because," among other things, "defendants are allowed to rebut the presumption, prior to class certification, by showing, for example, the absence of a price impact." *Id.* at 484. The court remanded the case so defendants could present their rebuttal arguments. *Id.* at 485-86 (citing *Oscar*, 487 F.3d at 270). Unlike in the Fifth Circuit, the burden of *disproving* price impact at class certification would be on *defendants*.

[7] In *In re Flag Telecom Holdings, Ltd. Sec. Litig.*, 574 F.3d 29, 39 (2d Cir. 2009), decided after *Salomon*, the court was asked "to reject the approach taken by the Fifth Circuit Court of Appeals in *Oscar* . . . ." Without mentioning *Salomon*, the court held that issue was not properly before it, but cited approvingly the district court cases in the Second Circuit rejecting *Oscar*. *Id.* at 39. The court noted those cases analyzed "proof of loss causation in the context of the Rule 23(b)(3) predominance requirement" and said "the cases cited from this Circuit represent the position that a plaintiff is entitled to a presumption of reliance at the certification stage" under the fraud-on-the-market presumption in *Basic* without

The Fifth Circuit's requirement is also in considerable tension with the principles of the other circuits because those courts do not require proof of loss causation to invoke the fraud-on-the-market presumption. *See, e.g., In re PolyMedica Corp. Sec. Litig.*, 432 F.3d 1, 7 (1st Cir. 2005) ("Before an investor can be presumed to have relied upon the integrity of the market price, . . . the market must be 'efficient'."); *Binder v. Gillespie*, 184 F.3d 1059, 1064 (9th Cir. 1999) ("[T]he presumption of reliance is available only when a plaintiff alleges that a defendant made material representations or omissions concerning a security that is actively traded in an 'efficient market,' thereby establishing a 'fraud on the market.'"); *In re Burlington Coat Factory Sec. Litig.*, 114 F.3d 1410, 1419 n.8 (3d Cir. 1997) ("[I]n order to avail themselves of the fraud on the market theory . . . plaintiffs have to allege that the stock in question traded on an open and efficient market.").

Moreover, every district court outside of the Fifth Circuit that has expressly addressed the holding in *Oscar* has declined to adopt it.[8] *Oscar* has

---

demonstrating loss causation, "an issue that is not before us here." *Id.*

[8] The only possible exception is no longer good law. *In re Credit Suisse First Boston Corp. (Lantronix, Inc.) Analyst Sec. Litig.*, 250 F.R.D. 137 (S.D.N.Y. 2008), has been referenced by a few courts as implicitly adopting *Oscar*. *See, e.g., In re Alstom SA Sec. Litig.*, 253 F.R.D. 266, 281 (S.D.N.Y. 2008); *Lapin v. Goldman Sachs & Co.*, 254 F.R.D. 168, 185 (S.D.N.Y. 2008). The *Lantronix* opinion was issued prior to the Second Circuit's

already been rejected, disagreed with, distinguished, or not followed by district courts in the First,[9] Second,[10] Fourth,[11] Sixth,[12] Seventh,[13] Ninth,[14]

---

opinion in *Salomon*, 544 F.3d 474, and, insofar as it conflicts with *Salomon*, is no longer good law.

[9] *See, e.g., In re Boston Scientific*, 604 F. Supp.2d at 287 (proof of loss causation is "more properly addressed on summary judgment or at trial"); *In re Credit Suisse-AOL Sec. Litig.*, 253 F.R.D. 17, 30 (D. Mass. 2008) ("Defendants' arguments regarding market impact . . . do not address the purposes of Rule 23. To engage with them here would drag the Court into an unwieldy trial on the merits.") (citations and quotations omitted).

[10] *See, e.g., Darquea v. Jarden Corp.*, No. 06 Civ. 722(CLB), 2008 WL 622811, at *4 (S.D.N.Y. Mar. 6, 2008) (*Oscar* "is limited to the Fifth Circuit."). *Wagner v. Barrick Gold Corp.*, 251 F.R.D. 112, 118-19 (S.D.N.Y. 2008) (to trigger the fraud-on-the-market presumption, plaintiffs need not prove loss causation at the class certification stage); *In re Omnicom Group, Inc. Sec. Litig.*, No. 02 Civ. 4483(RCC), 2007 WL 1280640, at *8 (S.D.N.Y. Apr. 30, 2007) (rejecting loss causation challenge to predominance as "an attempt to litigate class certification on the merits of the action").

[14] *See, e.g., In re LDK Solar Sec. Litig.*, 255 F.R.D. 519, 530-31 (N.D. Cal. 2009) (*Oscar* "is in no small amount of tension with the Supreme Court's decision in *Basic v. Levinson*."); *In re Micron Techs., Inc. Sec. Litig.*, 247 F.R.D. 627, 634 (D. Idaho 2007) ("It is unlikely that [*Oscar*] would be adopted in this Circuit because it misreads *Basic*.").

[15] *See, e.g., In re Nature's Sunshine Prod's. Inc. Sec. Litig.*, 251 F.R.D. 656, 665 (D. Utah 2008) ("Oscar appears to be in conflict with Supreme Court and Tenth Circuit precedent which warn against determining the merits at the class certification stage.").

[16] *See, e.g., In re Netbank, Inc. Sec. Litig.*, 259 F.R.D. 656, 676 n.14 (N.D. Ga. 2009) (declining to be first court in Eleventh Circuit to follow *Oscar*).

has percolated throughout the lower courts and is ripe for, and in need of, review by this Court.[17]

ii. This Court Should Grant Certiorari to Resolve the Conflict Between the Fifth Circuit's Holding and the Principles of *Basic*

The Fifth Circuit holding in *AMS Fund* (and *Oscar* conflicts with this Court's ruling in *Basic* in several ways. That is why other courts have described *Oscar* as inconsistent with *Basic* and declined to follow it.

a. The Fifth Circuit's Holding Improperly Imposes an Additional Requirement Beyond Those Established by This Court in *Basic* for Plaintiffs Who Seek to Invoke

---

[17] The fact that this case reached the Fifth Circuit on an interlocutory appeal under Fed. R. Civ. P. 23(f) does not weigh against granting the petition. It is not premature to hear an appeal in this case, which has been stayed virtually since the district court denied class certification. *See* Pet. App. 1a, 109a, 137a, 139a. The parties agree that denial of class certification is, as a practical matter, likely dispositive of this action. *Compare id.* at 77a-78a *with id* at 105a-06a. Moreover, the key issue presented by this petition – whether loss causation must be demonstrated at class certification – is a purely legal one. Finally, the district court could not alter its ruling even if it wished insofar as the Fifth Circuit has affirmed its order denying class certification.

the Fraud-on-the-Market Presumption

In *Basic*, this Court adopted the fraud-on-the-market theory, holding that courts may presume class-wide reliance provided plaintiffs establish that the stock in question trades on an efficient market and that they bought or sold the stock during the relevant interval. 485 U.S. at 248. The Court adopted the test used by the Sixth Circuit, which required a plaintiff to allege and prove:

> (1) that the defendant made public misrepresentations; (2) that the misrepresentations were material; (3) that the shares were traded on an efficient market; (4) that the misrepresentations would induce a reasonable, relying investor to misjudge the value of the shares; and (5) that the plaintiff traded the shares between the time the misrepresentations were made and the time the truth was revealed.

Id. at 248 n.27.[18] Plaintiffs who satisfied those requirements were entitled to invoke the fraud-on-the-market presumption.

The Fifth Circuit's holding improperly conflates the fraud-on-the-market presumption—a presumption that establishes reliance on a class-wide basis—with the requirements for establishing

---

[18] The Court held that given its decision "regarding the definition of materiality . . . elements (2) and (4) may collapse into one." *Id.*

loss causation, *i.e.*, proximate cause. In so doing, the Fifth Circuit imposes a substantial burden beyond that required by *Basic*, and in violation of *Basic*. *See Oscar*, 487 F.3d at 278 (Dennis, J., dissenting) ("In essence, the majority's revised standard both incorrectly deprives plaintiffs of the benefit of the fraud-on-the-market presumption of reliance afforded them by *Basic* and inexplicably requires them to prove the separate element of loss causation at the class certification stage."). The Fifth Circuit ruling also conflicts with this Court's decision in *Stoneridge Investment Partners LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148 761 (2008), where the Court cited approvingly the *Basic* test when facing the issue of whether the fraud-on-the-market presumption applied to the conduct of non-issuers without indicating plaintiffs also had to demonstrate loss causation to invoke the presumption. 552 U.S. at 159 ("[U]nder the fraud-on-the-market doctrine, reliance is presumed when the statements at issue become public" because "public information is reflected in the market price of the security."). While the Court ultimately concluded that the presumption did not apply, it did so because defendants' "deceptive acts were not communicated to the public," as required by *Basic*. *Id.*

The Fifth Circuit's requirement that plaintiffs must establish loss causation is flawed because whether plaintiffs can establish proximate cause (loss causation) is analytically distinct from whether they can establish reliance, based on the integrity of

the market price.[19] Although the fraud-on-the-market presumption and loss causation are linked in some ways at a general conceptual level—both concern causation (one transaction causation and the other proximate causation)—they are nonetheless separate and distinct requirements of a securities fraud claim. *See Dura Pharms., Inc.*, 544 U.S. at 341-42.

The Fifth Circuit's approach is further flawed because whether a particular misstatement moved the stock price has no bearing on class certification since that question will necessarily be common to all members of the proposed class, provided the fraud-on-the-market presumption applies. In such instances, loss causation will either exist for the whole class, or for no one. The sole purpose for the fraud on the market presumption is to enable courts "to conclude that common questions of fact or law predominate[ ] over particular questions pertaining to individual plaintiffs." *See Basic*, 485 U.S. at 228. Tellingly, the Fifth Circuit does not contend in *AMS Fund* that either loss causation or reliance requires an individual class-member-by-class-member inquiry and so cannot be established through common evidence.

---

[19] Loss causation is not relevant to establish materiality because materiality depends on whether there is "[a] substantial likelihood that" the false or misleading statement "would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available." *Basic*, 485 U.S. at 231-32.

AMS Fund is not the first Fifth Circuit case to conflate loss causation and the fraud-on-the-market theory of reliance. Rather, *AMS Fund* relies on *Oscar*, which, in turn, relies on two earlier Fifth Circuit cases, *Nathenson v. Zonagen, Inc.*, 267 F.3d 400 (5th Cir. 2001), and *Greenberg v. Crossroads Systems, Inc.*, 364 F.3d 657, 661 (5th Cir. 2004). In *Nathenson*, the court held that "in cases depending on the fraud-on-the-market theory, . . . the complained of misrepresentation or omission [must] have actually affected the market price of the stock." 267 F.3d at 415. *Nathenson* was decided on a motion to dismiss, and since the court found that the complaint itself demonstrated that the alleged misstatements did not affect the market price of the stock, the Fifth Circuit affirmed the trial court's dismissal of the complaint. *Id.* at 426. The court's conflation of the fraud-on-the-market theory and loss causation was harmless because the plaintiff had to plead both to survive a motion to dismiss. Here, of course, Lead Plaintiff has already prevailed on a motion to dismiss.

Similarly, in *Greenberg*, the Fifth Circuit held that:

> plaintiffs cannot trigger the presumption of reliance by simply offering evidence of any decrease in price following the release of negative information. Such evidence does not raise an inference that the stock's price was actually affected by an earlier release of positive information. To raise an inference through a decline in stock price that an earlier false, positive statement actually

> affected a stock's price, the plaintiffs must show that the false statement causing the increase was related to the statement causing the decrease.

364 F.3d at 665. *Greenberg* was decided at summary judgment. Thus, while *Greenberg* requires showing loss causation to establish the presumption of reliance, the error is again harmless because at summary judgment, the plaintiffs had to make a prima facie case of reliance and loss causation sufficient to raise a triable issue of fact.

The Fifth Circuit's error here is not harmless. By requiring proof of loss causation, without merits discovery and with a higher required standard of proof than at summary judgment (preponderance of the evidence compared to a prima facie case), the Fifth Circuit has imposed an exceedingly stiff burden on plaintiffs at a point in the litigation where the burden is particularly not appropriate. The court in *AMS Fund* sought to justify this increased burden, saying: "[T]he main concern when addressing the fraud-on-the-market presumption of reliance is whether allegedly false statements actually inflated the company's stock price." Pet. App. 116a. But that is a question of loss causation, not fraud on the market. For the latter, the question is whether the stock incorporates material information, not how that information affects the stock price. In imposing such a requirement, the Fifth Circuit ensures that in some meritorious class actions, courts will improperly deny class certification because some plaintiffs will be unable to establish loss causation without merits discovery.

This is especially true where the court requires a corrective disclosure that "more probably than not shows that the original estimates or predictions were designed to defraud." *Id.* at 122a. As this Court recently explained in determining whether a securities fraud complaint was timely filed, evidence that a defendant acted with scienter is quite different from evidence that the defendant made a false statement, and so may require additional discovery:

> We recognize that certain statements are such that, to show them false is normally to show scienter as well. It is unlikely, for example, that someone would falsely say "I am not married" without being aware of the fact that his statement is false. Where § 10(b) is at issue, however, the relation of factual falsity and state of mind is more context specific. An incorrect prediction about a firm's future earnings, by itself, does not automatically tell us whether the speaker deliberately lied or just made an innocent (and therefore nonactionable) error. Hence, the statute may require "discovery" of scienter-related facts beyond the facts that show a statement (or omission) to be materially false or misleading.

Merck & Co, Inc. v. Reynolds, No. 08-905, 2010 WL 1655827, at *13 (Apr. 27, 2010). The Fifth Circuit fails to explain how plaintiffs at class certification, without merits discovery, can provide proof of scienter—*e.g.*, that defendants' "estimates or

predictions were designed to defraud"—other than in the exceedingly rare case where defendant makes a confession. *See* Pet. App. 122a. Needless to say, such confessions will likely be rare because company executives always have an incentive to put the best spin on the news and to avoid criticizing their own prior conduct.

The impact of such a requirement is readily apparent in this case. For instance, the Fifth Circuit held that Halliburton's June 28, 2001 announcement that Dresser Industries' former subsidiary, Harbison-Walker Refractories Company, had sought financial assistance to pay its pending asbestos claims was not a corrective disclosure because the June 28, 2001 announcement did not indicate that Halliburton *knew* of Harbison-Walker's financial difficulties prior to the announcement. *Id.* at 125a-27a. It did not matter that the Lead Plaintiff had alleged in the complaint that Defendants knew throughout the class period that Harbison-Walker would need Halliburton's financial assistance to pay its own asbestos claims. *See* USCA5 4575. Thus, absent a confession by Halliburton, the only way to "prove" the June 28, 2001 corrective disclosure "shows the misleading or deceptive nature" of Halliburton's prior announcements would be to establish that Halliburton knew but failed to disclose prior to June 28, 2001 that it would ultimately bear financial responsibility for claims against Harbison-Walker. It is not possible for plaintiff to do that without merits discovery.[20]

---

[20] In *AMS Fund*, the Fifth Circuit said in a footnote, "We recognize that a plaintiff need not prove at the class

b. The Fifth Circuit's Holding Improperly Shifts the Burden of Proof for the Fraud-on-the-Market Presumption Established in *Basic*

In *Basic*, this Court articulated several reasons for its adoption of the fraud-on-the-market presumption. First, the Court held that presumptions are useful when "direct proof" is "difficult", adding that "[r]equiring a plaintiff to show a speculative state of facts, *i.e.*, how he would have acted if omitted material information had been disclosed, or if the misrepresentation had not been made, would place an unnecessarily unrealistic evidentiary burden on the Rule 10b-5 plaintiff who has traded on an impersonal market." *Id.* at 245 (citations omitted). Second, the Court found presumptions are useful "for allocating the burdens of proof between parties" and explained that the presumption furthered Congress's intent in enacting the 1934 Act: "The presumption of reliance employed in this case is consistent with, and, by facilitating rule 10b-5 litigation, supports, the congressional policy embodied in the 1934 Act. In

---

certification stage intentional fraud by the defendant." Pet. App. 123a n.35. But in concluding that the Lead Plaintiff had not established loss causation, the court effectively required Lead Plaintiff to prove scienter. *See, e.g., id.* at 126a (did not show "prior reserve estimates were intentionally misleading"); *id.* at 126a-27a ("no indication [prior estimates] were misleading or deceptive"; *id.* at 129a ("undermines any conclusion . . . the company acted with deception"); *id* at 132a ("Plaintiff fails to show these announcements . . . revealed deceptive practices in Halliburton's accounting assumptions.").

drafting that Act, Congress expressly relied on the premise that securities markets are affected by information, and enacted legislation to facilitate an investor's reliance on the integrity of those markets." *Id.* at 245-46. Third, the Court said that the presumption is "supported by common sense and probability", noting that "[r]ecent empirical studies have tended to confirm Congress' premise that the market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations." *Id.* at 246.

The Fifth Circuit's requirement of proof of loss causation is inconsistent with—and undermines—not only the presumption that the Court adopted, but also its stated reasons for doing so. First, while the Court adopted the presumption to ease an "unrealistic evidentiary burden," *id.* at 245, the Fifth Circuit has imposed an additional and stiff evidentiary burden. Moreover, this newly imposed burden is unrelated to the burden at issue in *Basic*—requiring a plaintiff to show "how he would have acted had the material information been disclosed," *id.*—and so is improper. The Fifth Circuit's rule is also inconsistent with the Court's second stated reason for the presumption—congressional policy as embodied in the 1934 Act—because it imposes an additional and unnecessary hurdle before an investor may successfully bring a 10b-5 class action in reliance on the integrity of the market. Finally, the Fifth Circuit's requirement is inconsistent with the Court's third reason because proof or absence of loss causation neither confirms nor negates the presumption that "the market price of shares traded

on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations." *Id.* at 246.

The Fifth Circuit's reasoning is further at odds with this Court's reasoning. The Fifth Circuit was concerned about a theoretical possibility that the market for a given security might be inefficient or strong-form efficient with respect to a particular type of information, but this Court, as the Second Circuit declared, "stated that the presumption was justified, not by scientific certainty, but by considerations of fairness, probability, judicial economy, congressional policy, and common sense." *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 483 (2d Cir. 2008).

The Fifth Circuit's holding turns the presumption in *Basic* from something meant to *assist* a plaintiff into a nearly unscalable hurdle to class certification. While the Fifth Circuit attempted to anticipate and respond to the argument that it was improperly negating the presumption established by *Basic*, the court's logic is fundamentally unsound. The *Oscar* court held that it was not "improperly shift[ing] the burden, from a defendant's right of rebuttal to a plaintiff's burden of proof" because, "[a]s a matter of practice, the oft-chosen defensive move is to make '*any* showing that severs the link' between the misrepresentation and the plaintiff's loss; to do so rebuts on arrival the plaintiff's fraud-on-the-market theory." 487 F.3d at 265. The court quoted language specifying that the fraud-on-the-market presumption is rebuttable, *see*

Basic, 485 U.S. at 248, but the court's reliance on this language is flawed.

First, even if *Basic*'s presumption were a bubble bursting one—that is, if it dissolves in the face of any contrary evidence[21]— defendants still bear the initial burden of presenting contrary evidence. By requiring plaintiffs to prove loss causation without first requiring evidence from defendants to rebut the presumption, the Fifth Circuit has improperly lifted that burden. Second, the presumption is not a bubble bursting one but can be rebutted only by evidence that "severs" the basis for the presumption.[22] Third, a key footnote in *Basic* indicates the proper timing for any rebuttal is at trial, stating "[p]roof of that sort is a matter for trial, throughout which the District Court retains the authority to amend the certification order as may be appropriate." *Id.* at 248 n.29; *see In re PolyMedica Corp. Securities Litigation*, 432 F.3d 1, 7 n. 10 (1st Cir. 2005) ("defendant may still rebut this presumption at trial"); *Conn. Ret. Plans & Trust Funds v. Amgen, Inc.*, No. CV 07-2536 PSG (PLAx),

---

[21] *See United States v. Zavala*, 443 F.3d 1165, 1169 (9th Cir. 2006); BLACK'S LAW DICTIONARY 211 (8th ed. 2004) ("bursting bubble theory" as "[t]he principle that a presumption disappears once the presumed facts have been contradicted by credible evidence").

[22] *Basic* show the presumption is not a bubble bursting one: "*Any showing that severs the link* between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price, *will be sufficient to rebut the presumption of reliance.*" 485 U.S. at 248 (emphasis added).

2009 WL 2633743, at *12 (C.D. Cal. Aug. 12, 2009) ("While defendants are entitled to rebut that presumption, that issue is appropriate for resolution only after discovery."); *In re Micron Techs., Inc. Sec. Litig.*, 247 F.R.D. 627, 634 (D. Idaho 2007) (same).

Fourth, even if rebuttable at class certification, the presumption can be rebutted only by evidence that the stock does not trade in an efficient market or that the plaintiff did not rely on the price of the stock. The examples provided by the Court in *Basic* all concern a showing that the information at issue was already known to the market[23] or that the plaintiff did not rely upon the market price.[24] None of the Court's examples indicate a plaintiff must demonstrate loss causation to invoke the fraud-on-the-market presumption of

---

[23] The Court gave two examples to illustrate that possibility: (1) "if petitioners could show that the 'market makers' were privy to the truth about the merger discussions here with Combustion, and thus that the market price would not have been affected by their misrepresentations," or (2) "if, despite petitioners' allegedly fraudulent attempt to manipulate market price, news of the merger discussions credibly entered the market and dissipated the effects of the misstatements." 485 U.S. at 248-249.

[24] The Court illustrated that possibility with the following examples: "a plaintiff who believed that Basic's statements were false and that Basic was indeed engaged in merger discussions, and who consequently believed that Basic stock was artificially underpriced, but sold his shares nevertheless because of other unrelated concerns, e.g., potential antitrust problems, or political pressures to divest from shares of certain businesses, could not be said to have relied on the integrity of a price he knew had been manipulated." 485 U.S. at 249.

reliance, and it would be surprising if that were the case, because reliance and loss causation are distinct elements of a 10b-5 cause of action. *See Dura Pharms., Inc. v. Broudo*, 544 U.S. 336, 341-42 (2005).[25] The Fifth Circuit, however, erroneously and enormously expanded the type of information relevant to determining whether the presumption has been established or rebutted. In *AMS Fund*, for instance, the Fifth Circuit held that in the case of simultaneously released culpable and non-culpable news, plaintiffs bear the burden of disaggregating the effect of those respective disclosures and showing that the culpable disclosure had a substantial effect on the stock price. Pet. App. 117a-18a.[26] While that requirement is appropriate for establishing loss causation, it has no bearing on whether the market is efficient and so whether the fraud-on-the-market presumption should apply.

---

[25] The requirement for loss causation is codified in the PSLRA. *See* 15 U.S.C. § 78u-4(b)(4).

[26] By requiring plaintiffs to make this showing at class certification, the Fifth Circuit incents unscrupulous defendants to release culpable negative news on the same day as significant non-culpable negative news, rendering it difficult for plaintiffs to disaggregate the effects of negative news. "Such a loophole thwarts the legislative purpose of full disclosure by allowing corporations a way to escape legal accountability for inaccurate statements and material omissions." Tad E. Thompson, Recent Development, *Messin' with Texas: How the Fifth Circuit's Decision in Oscar Private Equity Misinterprets the Fraud-On-the-Market Theory*, 86 N.C.L. REV. 1086, 1096 (2008).

iii. The Issue Is Important, Ripe, and Recurring and the Fifth Circuit's Standard Is Wrong

This Court's decision in *Basic* establishes the fraud on the market theory of reliance. The Fifth Circuit's erroneous distortion of *Basic* affects all securities fraud class action cases in the Fifth Circuit and will continue to repeatedly arise in cases outside the Fifth Circuit as defendants seek to invoke the Fifth Circuit rule regarding loss causation as a basis for opposing class certification. Not only is this a recurring issue, it is also an important one because the Fifth Circuit's loss causation rule, especially as set forth in *AMS Fund*, is likely to largely negate private security class actions in the Fifth Circuit in contravention of federal policy that relies on private actions to help ensure adequate enforcement of the securities laws. *See Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308, 313 (2007) ("This Court has long recognized that meritorious private actions to enforce federal antifraud securities laws are an essential supplement to criminal prosecutions and civil enforcement actions brought, respectively, by the Department of Justice and the Securities and Exchange Commission (SEC)."); *Dura Pharms.*, 544 U.S. at 345 ("The securities statutes seek to maintain public confidence in the marketplace. They do so by deterring fraud, in part, through the availability of private securities fraud actions." (citation omitted)). This development, rendering private securities litigation in the Fifth Circuit a near nullity, is especially troubling because the recent market crisis underscores the importance of

having private security actions complement sometimes inconsistent governmental actions to enforce the securities laws. [27]

The decision in *AMS* Fund is also troubling because it will lead to erroneous decisions *not* to certify a class in cases where, with full discovery, plaintiffs *would* be able to establish loss causation. *See supra* pp. 23-25.

B. This Court Should Resolve the Conflict Between the Requirements for Class Certification Under Federal Rule of Civil Procedure 23 and *Eisen* on the One Hand and the Fifth Circuit Rule on the Other Hand

Under Federal Rule of Civil Procedure 23(a), plaintiffs must demonstrate that they satisfy the prerequisites for class certification—numerosity, commonality, typicality and adequacy. Plaintiffs must also satisfy one of the requirements of FED. R. CIV. P. 23(b). In damage actions, plaintiffs must

---

[27] As one commentator stated:

> The result of an opinion like *Oscar*, which significantly raised the bar for class certification, will effectively eliminate any potential for recovery for those investors whose stake in the corporation was insubstantial. Such an outcome stands contrary to one of the principal justifications for class action litigation—enabling suits where the individual class members cannot maintain actions individually—and is detrimental to public policy.

Thompson, *supra* note 26, at 1101 (footnotes omitted).

demonstrate that "questions of law or fact common to class members predominate over any questions affecting only individual members, and that a class action is superior to other available methods for fairly and efficiently adjudicating the controversy." Pet. App. 142a. Provided these requirements are met, the class should be certified.

In the Fifth Circuit alone, plaintiffs must satisfy an additional requirement; they must also demonstrate loss causation. That additional requirement violates Rule 23, which is binding on all federal courts. *Cf. Stone Container Corp. v. United States*, 229 F.3d 1345, 1354 (Fed. Cir. 2000) ("Because '[a]ll laws in conflict with [the Federal Rules of Civil Procedure] shall be of no further force or effect after such rules have taken effect,' 28 U.S.C. § 2072(b), the Federal Rules of Civil Procedure, like the Federal Rules of Criminal procedure [sic], are 'as binding as any federal statute.'"). In imposing an added requirement that the Fifth Circuit admits entails a "merit inquiry," *Oscar*, 487 F.3d at 267, the Fifth Circuit ruling also conflicts with the principles of *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156, 177 (1974), where the Court declared: "We find nothing in either the language or history of Rule 23 that gives a court any authority to conduct a preliminary inquiry into the merits of a suit in order to determine whether it may be maintained as a class action."

The Fifth Circuit claims that determining whether plaintiffs have demonstrated loss causation by a preponderance of the admissible evidence is "a merit inquiry central to the certification decision,"

Oscar, 487 F.3d at 267, but the court fails to justify its holding. If demonstrating loss causation is indeed "central to the certification decision," *id.*, it is curious that no court other than the Fifth Circuit, including this Court in *Basic* and *Stoneridge*, has had the acumen to detect that linkage. Numerous courts embraced a form of the fraud-on-the-market presumption before it was adopted by this Court in *Basic*, but none held that it was necessary to establish loss causation in order to invoke it. Nor has any court outside the Fifth Circuit so held since the Court issued its ruling in *Basic* over twenty years ago or after this Court's ruling in *Dura* in 2005. In fact, the Fifth Circuit itself analyzed the requisite showing necessary to trigger the fraud on the market presumption following this Court's decision in *Dura*, and its holding did not require proof of loss causation. *See, e.g., Bell v. Ascendent Solutions, Inc.*, 422 F.3d 307, 311-12 (5th Cir. 2005) (plaintiffs seeking to take advantage of the presumption of class-wide reliance permitted under the fraud-on-the-market theory must make a preliminary showing of market efficiency at class certification).[28] And, of course, no court outside the Fifth Circuit has chosen to follow *Oscar*.

The Fifth Circuit's current requirement that plaintiffs establish loss causation conflicts with

---

[28] The *Oscar* Court attempts to justify its holding in part by citing the 2003 change in Rule 23, which required the determination whether to certify a class to be made "at an early practicable time," instead of "as soon as practicable." *See Oscar*, 487 F.3d at 267. That change does not justify imposing a burden not inherent in a proper analysis under Rule 23.

Eisen and Federal Rule of Civil Procedure 23 because demonstrating loss causation is not necessary for class certification, as demonstrated by the uniform practice of all federal courts outside the Fifth Circuit. While *Eisen* was initially misconstrued to prohibit delving into the merits of the underlying claims at class certification under any circumstances, courts have since properly interpreted *Eisen* to prohibit examination of the merits of the underlying claim except insofar as necessary to determine whether the prerequisites for certification under Rule 23 have been met. *See Dukes v. Wal-Mart Stores, Inc.*, Nos. 04-16688, 04-16720, 2010 WL 1644259, at * 9 n.7 (9th Cir. Apr. 26, 2010) (en banc); *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 316-317 (3d Cir. 2008); *In re Initial Public Sec. Offerings Litig.*, 471 F.3d 24, 41 (2d Cir. 2006); *see also* FED. R. CIV. P. 23(c)(1)(A) advisory committee's note (2003 amendments) ("an evaluation of the probable outcome on the merits is not properly part of the certification decision").[29]

Yet, in *AMS Fund* (and *Oscar*), the Fifth Circuit has done precisely what *Eisen* and Rule 23 prohibit—entering into a "merit inquiry" unrelated to the requirements of Rule 23—which effectively

---

[29] Several appellate courts hold that plaintiff must establish the prerequisites for class certification by as preponderance of the evidence. *See Teamsters Local 445 Freight Division Pension Fund v. Bombardier, Inc.*, 546 F.3d 196, 202 (2d Cir.2008); *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d at 320. Unlike the Fifth Circuit, however, they apply that standard only to Rule 23 prerequisites.

"requir[es] mini-trials on the merits of cases at the class certification stage." *Oscar*, 487 F.3d at 272 (Dennis, J., dissenting); *see also In re The Mills Corp. Sec. Litig.*, 257 F.R.D. 101, 108 (E.D. Va. 2009) ("Requiring a plaintiff to 'prove' loss causation at class certification risks converting class certification into a hearing on the merits."); *In re LDK Solar Sec. Litig.*, 255 F.R.D. 519, 530 (N.D. Cal. 2009) (*Oscar* "essentially injects what is fundamentally a merits inquiry into the class-certification inquiry through the back door: it requires the *plaintiff* to *prove* loss causation in order to avail itself of the benefit of the fraud-on-the-market presumption"); *Schleicher v. Wendt*, No. 1:02-cv-1332-DFH-TAB, 2009 WL 761157, at *12 (S.D. Ind. Mar. 20, 2009) ("The *Oscar Private Equity* court's problem with loss causation was a class-wide problem and it is not the court's job to ascertain the merit of that element of the claim at the class certification stage."); *In re Alstom SA Sec. Litig.*, 253 F.R.D. 266, 280 (S.D.N.Y. 2008) ("Loss Causation . . . relates to the merits of Plaintiffs' case and Defendants have not sufficiently established how Loss Causation is related to any necessary element of Rule 23."). Indeed, by requiring proof of loss causation and, effectively, scienter at class certification, the Fifth Circuit has essentially required plaintiffs to prove almost their entire case in order to achieve class certification.

CONCLUSION

The petition for a writ of certiorari should be granted.

Respectfully submitted,

Neil Rothstein

ORDER

Even though the Court intends to enter an Order to the same effect at a later date, the Court has concluded that its Order entered September 29, 2008 [Docket Entry #440], denying class certification to Plaintiffs, should be vacated. The Court believes this Order may have invoked the ten day time limit for interlocutory appeal under Rule 23(f); however, the Court did not intend such a result, but merely intended to inform the parties of the Court's decision to deny class certification, with the actual Order and Memorandum Opinion to follow at a later date, at which time an interlocutory appeal would be appropriate. To eliminate the necessity of Lead

Plaintiff filing a petition for permission to appeal at this time, the Court hereby VACATES the September 29, 2008 Order. The Court intends to enter a Memorandum Opinion and Order by November 3, 2008, denying class certification to Plaintiffs.

The Court also hereby GRANTS Lead Plaintiff's Motion for Temporary Stay [Docket Entry #341]. The stay will remain in effect until the Court rules on a future Motion to lift it.

THEREFORE IT IS ORDERED that the September 29, 2008 Order denying class certification is hereby VACATED, and the Lead Plaintiff's Motion for Temporary Stay is hereby GRANTED.

SO ORDERED.

DATED this 9th day of October, 2008.

MEMORANDUM OPINION AND ORDER

Before the Court is the Plaintiffs' Motion to Certify Class [Docket Entry #34 1]. The Court held a hearing on this Motion on March 21, 2008, and approved The Archdiocese of Milwaukee Supporting Fund, Inc. ("AMS") as Class Representative.[1] The Court also noted the parties' agreement, and finds independently, that the Proposed Class satisfies Federal Rule of Civil Procedure 23 as to numerosity, commonality, typicality, and adequacy of AMS as a class representative. The parties did not dispute,

[1] The Court did not approve Plaintiff Ben Alan Murphey as a Class Representative.

and the Court also finds, that but for the single issue discussed below, a class action would be the superior method for adjudicating the claims of these class members.

The sole issue in dispute is the application of the requirement that, in a securities fraud class action, loss causation must be proven at the class certification stage.[2] Absent this requirement, the Court would certify the class. However, having considered the parties' extensive briefing, oral argument, and the applicable law, the Court is of the opinion that Plaintiffs have not demonstrated loss causation as to any of their claims. For that reason, Plaintiffs' Motion to Certify is **DENIED**.

BACKGROUND

Plaintiffs' Fourth Consolidated Amended Complaint ("Complaint") against Defendant Halliburton Company, et al ("Halliburton"), alleges misrepresentations with respect to three issues: (1) the expense of asbestos litigation; (2) changes to the accounting methodology used by Halliburton and their effect on earnings; and (3) the benefits of Halliburton's merger with Dresser Industries ("Dresser"). The class period is June 3, 1999 to December 7, 2001. Plaintiffs allege that during this period Halliburton, under the guidance of Dick Cheney (CEO until July 2000) and David Lesar (CEO since July 2000), downplayed the company's estimated asbestos liabilities, falsified earnings

---

[2] *See Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261, 269 (5th Cir. 2007).

statements, and overstated the benefits of a merger with Dresser, in an effort to inflate Halliburton's stock price.

Plaintiffs point to eight specific disclosures, accompanied by a drop in Halliburton's stock price, as evidence of the inflationary effects of alleged misrepresentations on Halliburton's stock price. Plaintiffs rely on an expert witness, Jane Nettesheim ("Nettesheim"), who prepared a statistical model of Halliburton's stock price during the class period. Nettesheim asserts that each of these eight disclosures resulted in a company-specific decline in the stock price that cannot be attributed to general market trends or other external factors. Halliburton argues that Nettesheim's model is inadequate to satisfy the requirements for loss causation in the Fifth Circuit. The parties do not dispute that there was an efficient market in this case.

LEGAL STANDARD REGARDING LOSS CAUSATION

To establish a securities claim under Securities and Exchange Commission ("SEC") Rule 10b-5, a plaintiff must establish six elements: (1) a material misrepresentation or omission; (2) scienter; (3) a connection with the purchase or sale of a security; (4) reliance; (5) economic loss; and (6) loss causation, "i.e., a causal connection between the material misrepresentation and the loss."[3] In class

---

action securities cases such as this one, plaintiffs can satisfy the reliance requirement through the fraud-on-the-market theory.

The fraud-on-the-market theory presumes that in an open and developed securities market, a company's stock price is determined by all available material information. Thus, buyers or sellers can be defrauded even if they cannot prove they personally relied on the alleged misstatements.[4] In *Greenberg v. Crossroads Systems, Inc.*, the Fifth Circuit held that class-wide reliance is rebuttably presumed where: "(1) the defendant made public material misrepresentations, (2) the defendant's shares were traded in an efficient market, and (3) the plaintiffs traded shares between the time the misrepresentations were made and the time the truth was revealed."[5]

The Fifth Circuit recently tightened the first Greenberg requirement by requiring "proof that the [defendant's] misstatement actually moved the market."[6] As a result, Plaintiffs in this case must demonstrate loss causation in order to trigger the fraud-on-the-market presumption of class reliance.[7] The Fifth Circuit requires loss causation to be "established at the class certification stage by a preponderance of all admissible evidence."[8] The Court must make an empirical judgment on loss

causation "drawing largely from publicly available data thereby leaving minimal need for discovery."[9]

This approach to loss causation imposes an exceedingly high burden on Plaintiffs at an early stage of the litigation, but the Fifth Circuit determined that such a high burden was justified because of "the in *terrorem* power of class certification, the extraordinary leverage bestowed upon plaintiffs with certification and the due process rights of the parties."[10] This Court is bound to follow the Fifth Circuit's precedent, but notes that the bar is now extremely high for all plaintiffs seeking class certification in securities litigation.

Plaintiffs can show that an alleged misrepresentation actually affected the market in one of two ways: (1) demonstrating an increase in the stock price after the release of false positive news; or (2) demonstrating a decrease in price following a corrective disclosure.[11] Confirmatory statements, or information already known to the market, are deemed not to actually affect the stock price, because an efficient market does not respond to information already known.[12] An efficient

---

[10] *Id.* (citing *Oscar*, 487 F.3d at 266-67 ("class certification creates insurmountable pressure on defendants to settle")).

[11] *Nathenson v. Zonagen*, 267 F.3d 400, 418-19 (5th Cir. 2001). Here, Plaintiffs rely only on the second method of proving stock price inflation—showing the stock price decreased following alleged corrective disclosures. They do not point to any stock price increases resulting from positive misrepresentations.

[12] *Flowserve*, 245 F.R.D. at 568 (citing *Nathenson*, 267 F.3d at 419); Greenberg, 364 F.3d at 665-66 ("confirmatory information

securities market fully responds to new information the first time it is made public, so misrepresentations cannot be actionable unless they are non-confirmatory, and complete corrective disclosures will only affect the stock price when they are first made.

The burden on claimants like Plaintiffs is further enhanced by the requirement that when relying on a *decline* in the company's stock price to prove that the price had been inflated by false positive information, they "must show that the false statement causing the increase was related to the statement causing the decrease."[13] This burden is derived from the theory of proximate loss—plaintiffs must show that the loss resulting from the corrective disclosure is proximately derived from the earlier misrepresentation. The absence of such a requirement would "bring about harm of the very sort the statutes seek to avoid" and would "tend to transform a private securities action into a partial downside insurance policy."[14]

When a company makes corrective disclosures and combines them with a discussion of unrelated negative information, plaintiffs must also "demonstrate that there is a reasonable likelihood that the cause of the decline in price is due to the revelation of the truth and not the release of the unrelated negative information."[15] Although at the

---

has already been digested by the market and will not cause a change in stock price").

[13] *Greenberg*, 364 F.3d at 665.

[14] *Dura Pharm., Inc.*, 544 U.S. at 347.

[15] *Greenberg*, 364 F.3d at 665.

class certification stage plaintiffs need not quantify the portion of loss that resulted from the false information rather than the unrelated disclosure, or prove that "some percentage of the drop was attributable to the corrective [portion of the] disclosure—the plaintiffs must, in order to establish loss causation at this stage, offer some empirically-based showing that the corrective disclosure was more than just present at the scene."[16]

Expert analysis can provide evidence to support the causation requirement, but it is not sufficient to carry plaintiffs' burden "without reference to any post-mortem data [the experts] have reviewed or conducted."[17] However, in some cases it may be so evident that a stock decline is driven by a particular corrective disclosure that no empirical analysis would be necessary to disaggregate the effect of the corrective disclosure from other unrelated disclosures.[18] For example, in Greenberg, the Fifth Circuit compared information about company earnings to "news of temporary interoperability problems," and concluded that:

> [U]nlike the news of temporary interoperability problems, we are persuaded the news that a company's revenue will be 66% below estimates satisfies the plaintiffs [sic] burden. News that a company's earnings will be two-thirds short of analysts [sic] estimates is the type of negative

---

[16] *Oscar*, 487 F.3d at 271.

[17] *Id.*

[18] *See Greenberg*, 364 F.3d at 669.

> information most likely to cause a sharp decline in stock price.[19]

As a result, even though the "plaintiffs offer[ed] no evidence or analysis tending to show that the drop in price following the [corrective disclosure] was likely caused by the negative financial news" the court found "that [the defendant's] statements ... may form the basis for the plaintiffs [sic] fraud-on-the-market claim."[20]

In *Flowserve*, Judge Boyle clarified the plaintiffs' burden at the class certification phase:

> Plaintiffs who seek class status by showing collective reliance through the fraud-on-market presumption must show that the defendant made public, material misstatements, that the stocks traded in an efficient market, and that the stock price was actually affected by the purported fraud. To show that a stock price was actually affected, plaintiffs must show that false, non-confirmatory positive statements caused a positive effect on the stock price. Alternatively, plaintiffs must show: (1) that an alleged corrective disclosure causing the decrease in price is *related to* the false, non-confirmatory positive statement made earlier, and (2) that it is *more probable than not* that it was this related corrective disclosure, and not any other unrelated

---

[19] *Id.*
[20] *Id.*

> negative statement, that caused the stock price decline.[21]

Because the Plaintiffs in this case have presented no evidence of false, non-confirmatory positive statements causing a *positive* effect on the stock price, it is this second, alternative burden that Plaintiffs must meet.

ANALYSIS

Plaintiffs claim that Halliburton made material misrepresentations, and then later made corrective disclosures with respect to three different issues: first, that Halliburton knowingly minimized its prospective liabilities from asbestos litigation to maintain its attractiveness to investors; second, that Halliburton employed fraudulent accounting practices to overstate its revenue; and third, that Halliburton executives made false statements about the anticipated success of Halliburton' s merger with Dresser, to inflate the price of Halliburton' s stock.

I. Asbestos Liabilities

Plaintiffs allege that Halliburton "intentionally concealed and affirmatively misrepresented the true significance of Halliburton's exposure to asbestos liabilities in Halliburton's financial statements, [SEC] [sic] filings, press releases and communications with analysts and investors." Plaintiffs point to four separate statements they claim are corrective disclosures,

---

[21] *Flowserve*, 245 F.R.D. at 569 (emphasis added).

each addressed in greater detail below. First, on June 28, 2001, Halliburton disclosed that Harbison-Walker,[22] a former subsidiary of Halliburton's new subsidiary (Dresser), had requested financial assistance from Halliburton to cover potential losses from asbestos lawsuits. David Lesar and Gary Morris, Halliburton's Executive Vice President and Chief Financial Officer through August of 2001, stated during a conference call with analysts that as a result, the "worst case scenario" would be a net exposure of $50 to $60 million in asbestos liabilities, a considerable increase over the previous month's estimate of $30 million. On June 28, 2001, Halliburton increased its asbestos reserves by $30 million to include this "worst case scenario," for total reserves of $60 million.

Second, Plaintiffs point to a Form 10-Q filed by Halliburton with the SEC on August 9, 2001, in which it further increased its asbestos liability reserves to $124 million in response to the request for assistance from Harbison-Walker. Third, on October 30, 2001, Halliburton issued a press release announcing a $150 million jury verdict in an asbestos lawsuit, for which Halliburton would be responsible for $21.3 million. Fourth, on December 7, 2001, Halliburton issued a press release detailing the recent asbestos verdicts returned against it. Nettesheim asserts that each of these disclosures was accompanied by a company-specific, statistically significant decline in Halliburton's stock price, and therefore proves loss causation.

---

[22] Harbison-Walker Refractories Company.

The Court concludes that Plaintiffs' arguments with respect to the asbestos issue are legally insufficient to establish loss causation. Defendants correctly argue that Plaintiffs' expert must link the alleged corrective disclosures with prior actionable misrepresentations in order to establish loss causation.[23] Here, Plaintiffs do not actually link any alleged misrepresentations with the four asbestos disclosures. Instead, Plaintiffs claim that the aggregate of Halliburton's SEC filings, financial statements, press releases, and conferences with analysts artificially inflated the value of Halliburton's stock price. Plaintiffs then argue that each of the four disclosures corrected some of the inflation caused by the aggregate of Halliburton's prior statements. However, this "fraud in the aggregate" argument simply fails to satisfy the Fifth Circuit's loss causation requirements.

In *Greenberg*, the court identified five distinct actionable statements regarding the interoperability of the defendant's routers that directly correlated with alleged corrective disclosures.[24] Here, Plaintiffs cite four "partial" corrective disclosures and argue that each disclosure led to a partial market correction of the aggregate inflation in Halliburton's stock price. Plaintiffs do not identify specific statements that were revealed to be fraudulent by these corrective disclosures. Importantly, it is the misrepresentations themselves, not the corrective disclosures, which form the basis of a valid securities fraud claim.

---

[23] *See Greenberg*, 364 F.3d at 666.

[24] *Id.*

Prior to the class period, Halliburton had in fact made significantly lower asbestos liability estimates in a number of its public filings. Plaintiffs point to these prior financial statements as creating an inflated stock price, without either identifying particular statements revealed to be fraudulent or eliminating confirmatory statements from the analysis.[25] Unless actionable statements, which were later corrected, are identified, Plaintiffs cannot establish loss causation.

However, even if the Court were to accept Plaintiffs' generalized approach as satisfying the initial requirements of loss causation, Plaintiffs' specific arguments with respect to each of the four alleged corrective disclosures are also insufficient to meet the loss causation burden.

A. June 28, 2001 Partial Corrective Disclosure

To establish an inflated stock price, Plaintiffs rely on those portions of Halliburton's SEC filings from 1999 to 2001, which reported the company's reserves for asbestos liabilities. Halliburton's latest SEC filing prior to the June 28, 2001 disclosure, filed in May 2001, reported liability reserves totaling $30 million and stated that Halliburton had reserved sufficient funds for its estimated asbestos liabilities. However, in June 2001, Harbison-Walker asked Halliburton for financial assistance with potential

---

[25] *See Flowserve*, 245 F.R.D. at 568 (citing *Nathenson*, 267 F.3d at 419).

asbestos claims.[26] Plaintiffs cite a conference call with analysts on June 28, 2001, where "Lesar and Morris stated that the 'worst case scenario' would be exposure, after insurance, of $50 to $60 million—not the $30 million that they had reported to be 'adequate' the previous month." Nettesheim opines that the drop in Halliburton's stock price following this alleged corrective disclosure establishes loss causation because the disclosure "related to Halliburton's misstatements—specifically misstatements concerning the significance of Halliburton's exposure to asbestos liabilities."

However, the disclosure does not "specifically reveal[]" any misrepresentation or fraud in Halliburton's prior asbestos estimates.[27] In *Greenberg*, the company's corrective disclosure about the interoperability of its routers "specifically revealed" that the prior representations about

---

[26] Harbison-Walker asked Halliburton for financial assistance with its potential asbestos claims, which Harbison- Walker assumed in 1992 as part of its spin-off from Dresser. Dresser agreed to handle asbestos claims filed prior to the spin-off, and Harbison-Walker agreed to handle asbestos claims filed afterward. Dresser and Harbison-Walker agreed that Harbison Walker could access Dresser's historical insurance coverage for the asbestos-related liabilities it assumed. The companies were, in effect, co-insured, so Halliburton had a direct interest in how Harbison-Walker's claims were resolved. If Harbison-Walker exhausted the insurance available to protect Dresser/ Halliburton, or if Dresser was named as a party to a lawsuit along with Harbison-Walker and Harbison-Walker was unable to fund the claims, then Halliburton would be responsible for these claims. Understandably, Halliburton stated to analysts that it had a "substantial interest" in resolving the asbestos claims against Harbison-Walker.

[27] *See Greenberg*, 364 F.3d at 666.

interoperability were incorrect.[28] Here, Plaintiffs do not allege, or prove, that Halliburton's prior asbestos liability estimates were revealed by the June 28 disclosure to be fraudulent or even incorrect. In fact, it is just as likely that Halliburton revised its estimated asbestos liability figures based on newly acquired information about the Harbison-Walker situation. Halliburton is correct in arguing that "[t]here is no allegation in the Fourth Complaint — and certainly no evidence—that Harbison-Walker required Dresser's assistance prior to this disclosure."

In *Flowserve*, Judge Boyle granted summary judgment for the defendants because the alleged corrective disclosures did not "disclose the truth about the alleged misrepresentations at the center of Plaintiffs' claims."[29] Judge Boyle found that lowering the company's earnings estimates did not show that Flowserve had previously misstated its financials or misrepresented its internal controls.[30] Likewise, adjusting Halliburton's estimated asbestos liability (especially in the context of Harbison-Walker's recent request for financial assistance) does not constitute evidence that Halliburton previously fraudulently misrepresented its asbestos liability estimates. Without citing an actionable prior misrepresentation, Plaintiffs cannot meet the requirements of loss causation.[31]

---

[28] *Id.*

[29] *Flowserve*, 245 F.R.D. at 578.

[30] *Id.* at 579.

[31] *See Greenberg*, 364 F.3d at 661.

Quite simply, countless external factors can cause a company to incur a loss, fail to meet earnings forecasts, or adjust liability estimates—each of which will very likely affect the company's stock price. However, Plaintiffs cannot establish loss causation by simply speculating that fraud caused the loss.[32] Plaintiffs must provide actual evidence of an unlawful scheme which inflated the stock price.[33] The corrective disclosure cited by the Plaintiffs does not reveal that Halliburton made an initial false statement about its asbestos liability. This flaw is apparent from Nettesheim's report, which states that "the stock price decline on June 29 was caused by information [provided on June 28] that partially corrected *investors' erroneous assessments* [of] Halliburton's asbestos liability." Plaintiffs' own expert failed to opine that the June 28 disclosure corrected intentionally fraudulent information produced by Halliburton regarding its asbestos liability.

The circumstances would be different if it were alleged, for example, that Halliburton previously stated that it was including Harbison-Walker's asbestos exposure in its liability estimates but in fact was not, or that Halliburton had no exposure to the Harbison-Walker claims and had agreed never to cover them, when in fact it had made such an agreement. In contrast, Plaintiffs seek a finding of loss causation based on speculation, a step Fifth Circuit precedent bars this Court from

---

[32] *See Oscar*, 487 F.3d at 271.

[33] *See Flowserve*, 245 F.R.D. at 579.

taking.[34] In short, Plaintiffs have not established loss causation with respect to the first disclosure.

B. August 9, 2001 Partial Corrective Disclosure

Similarly, Plaintiffs cannot establish loss causation with respect to the August 9, 2001 partial corrective disclosure. On August 9, 2001, Halliburton filed a Form 10-Q with the SEC, revealing that its accrued liability reserves had been increased from $64 million, as disclosed in its June 28, 2001 disclosure, to $124 million. Plaintiffs argue that the increase in Halliburton' s reserves to $124 million, in response to Harbison-Walker's request for assistance, contradicted Halliburton's earlier statement on July 25, 2001 that it would be "'prudent to accrue $60 million" to cover "potential exposure" for asbestos litigation after Harbison-Walker asked Halliburton for financial assistance with potential asbestos claims.[35]

---

[34] *See Oscar*, 487 F.3d at 271.

[35] On July 25, 2001, Halliburton held a conference call for analysts and money managers, where Lesar stated: "As we've previously reported in a press release on June 28, in a response [sic] to a request from Harbison-Walker for assistance to fund settlements of asbestos claims that Harbison had assumed at the time they were spun-off from Dresser Industries, we went in and took a look at the situation... Based on our analysis of Harbison's claims at this point in time and our concern that they may not be able to perform under their obligations, however, we thought it was prudent to accrue $60 million after-tax against the gain on the discontinued operations which, we believe, in our best judgment, is the potential exposure we have for this asbestos litigation..."

Plaintiffs cannot establish loss causation with respect to the August 9, 2001 disclosure because they have not shown that the disclosure had a *corrective* effect, as opposed to simply a negative effect, on the stock price.[36] If the release of negative information to the market "does not disclose the scheme [to drive up stock prices]," then the information "cannot correct the artificial inflation caused by the scheme."[37] The Court is "unwilling to infer loss causation" from mere speculation of fraud.[38]

The sudden and substantial increase in Halliburton's asbestos liability reserves is the *sine qua non* of Plaintiffs' allegation; however, there is nothing in the August 9 disclosure to suggest that Halliburton or Lesar were lying about the company's prior analysis of Harbison-Walker's asbestos liabilities. Rather, Plaintiffs point to the substantial difference between the two numbers and ask the Court to bridge the gap with an inference of fraud. While the Court recognizes that there was a significant increase in the amount of asbestos liability reserves which occurred over a very short period of time, it cannot speculate about Halliburton's motivation behind suddenly increasing the reserves, and is in fact barred from doing so by applicable precedent. Plaintiffs have not demonstrated that the August 9 disclosure *revealed a scheme* to inflate stock prices, as opposed to merely

---

[36] *See Flowserve*, 245 F.R.D. at 579 (citing *In re Initial Pub. Offering Sec. Litig.*, 339 F. Supp. 2d 261, 266 (S.D.N.Y. 2005)).
[37] *Id.*
[38] *See Oscar*, 487 F.3d at 271.

revealing a change in circumstances.[39] The Court will not infer fraud where there is no evidence of a scheme to inflate the stock price.[40]

In *Flowserve*, Judge Boyle did not certify a class, and granted summary judgment in favor of the defendants, because the alleged corrective disclosures did not "disclose the truth about the alleged misrepresentations at the center of Plaintiffs' claims."[41] There, releases that corrected previous earnings estimates did not establish that the company had either misstated its previous financial statements or misrepresented its internal controls.[42] Likewise, the mere existence of SEC filings that alter previous asbestos liability estimates cannot establish that the company misstated its previous asbestos liability estimates or misrepresented its potential asbestos liability.

While it is within the realm of possibility that Halliburton executives deliberately understated the company's asbestos liability a mere two weeks before doubling the reserve, Plaintiffs offer no disclosure that actually "*reveal[s]*" any such improper behavior to the market.[43] Plaintiffs' argument is, at best, "well-informed speculation."[44] Although the loss causation requirements imposed by the Fifth Circuit

---

[39] *See Greenberg*, 364 F.3d at 665 ("plaintiffs cannot trigger the presumption of reliance by simply offering evidence of any decrease in price following the release of negative information").

[44] *See Oscar*, 487 F.3d at 271.

are significant, that is the law which this Court must follow, and it bars certification of the class with respect to the second disclosure.

C. October 30, 2001 Partial Corrective Disclosure

Plaintiffs similarly cannot establish loss causation with respect to the October 30, 2001 disclosure. After the market closed on that day, "Halliburton announced that on October 26, 2001, a jury in Mississippi found Dresser (through Harbison-Walker) liable in two of six asbestos cases for total compensatory damages of $21.3 million."[45] Plaintiffs claim that " [t]he stock price declines on October 31 and November 1, 2001 were caused by information that partially corrected investors' erroneous assessments [of] Halliburton's asbestos liability."

This allegation focuses on the timing of the disclosure of a number of sizeable asbestos verdicts for which Halliburton was responsible. On September 12, 2001, a Texas jury returned a $130 million verdict against Halliburton and its co-defendants in an asbestos lawsuit.[46] On October 26,

---

[45] No judgment on the verdict had been entered against Halliburton as of that date. Plaintiffs provide conflicting information regarding this asbestos verdict, first stating that a Mississippi jury returned the verdict in the Complaint, and later stating that a "*second Texas jury*" returned this verdict in its reply brief. However, this discrepancy is not significant to the Court's loss causation inquiry.

[46] Plaintiffs also provide inconsistent information about this asbestos verdict. First, Plaintiffs claim in the Complaint that asbestos claims *relating to Harbison-Walker* led to the September 12 verdict, but Plaintiffs also allege in the

2001, a Mississippi jury returned an adverse asbestos verdict of $150 million, $21.3 million of which was Halliburton' s responsibility. Plaintiffs cite a press release issued by Halliburton on October 30, 2001, which discussed only the October verdict, as a corrective disclosure. Plaintiffs claim generally that Halliburton executives artificially inflated its stock price by making positive statements to analysts regarding Halliburton's estimated asbestos liabilities, and by failing to disclose the entire truth about the asbestos verdicts. Plaintiffs identify one statement that could qualify as a misrepresentation: on October 23, 2001, after the September verdict was

---

Complaint that "a jury returned a $130 million verdict *against Halliburton* and a co-defendant for five asbestos plaintiffs" (emphasis added), and again in their reply brief state that "*Halliburton* learned that a jury had returned a $130 million verdict *against it*" (emphasis added). Plaintiffs also initially allege only one "co-defendant" but later in the Complaint assert that the verdict was rendered against multiple "co-defendants." Finally, Plaintiffs allege that the Texas jury returned a *$130 million* verdict against Halliburton and a co-defendant for five asbestos plaintiffs, but later point to analysts' knowledge of the Texas jury award of *$65 million* in compensatory and punitive damages to five plaintiffs (and Nettesheim in fact refers to the fact that "a Texas District Court had entered a judgment against Dresser on a $65 million jury verdict rendered in September 2001"). These discrepancies could be important, given that Plaintiffs rely on Lesar's statement that "there have been no adverse developments at all with respect to the *Harbison-Walker* situation" (emphasis added) as a prior misstatement, and do not specifically allege that the September jury verdict was in fact a Harbison-Walker claim. However, assuming that the September verdict arose from a *Harbison-Walker* claim (and Halliburton does in fact state that the Texas court entered judgment "against Dresser"), the Plaintiffs still fail to meet the requirements of loss causation, as explained in greater detail below.

returned, Lesar stated that "there have been no adverse developments at all with respect to the Harbison-Walker situation."

However, the Court cannot certify a class based on the October 30 disclosure because it lacks one necessary element: the corrective disclosure must reveal to the marketplace the truth behind the alleged misrepresentation.[47] The October 30 disclosure does not reveal to the market the truth of the alleged misrepresentation of October 23, because the correction does not reference the September verdict. If any misrepresentation occurred on October 23, it necessarily went to the failure to disclose the September verdict, because the October verdict had not yet been returned. But only the October verdict, not the September verdict, was revealed in the October 30, 2001 disclosure.

The requirement that there be a corrective disclosure of the alleged misrepresentation is not a mere triviality. To establish a presumption of reliance, the Plaintiffs must show that the misrepresentation actually moved the market.[48] Such a showing may be made by Plaintiffs (1) showing an increase in stock price following the alleged misrepresentation, or (2) showing a decrease in the stock price following a corrective disclosure.[49]

---

[47] *See Greenberg*, 364 F.3d at 661.

[48] *See Oscar*, 487 F.3d at 265.

[49] *Flowserve*, 245 F.R.D. at 568 (citing *Nathenson*, 267 F.3d at 418-19). The Plaintiffs have not alleged an increase in stock price following any of the alleged misrepresentations, and therefore only the second mode of proving the

Without a corrective disclosure regarding the September verdict, the only verdict the alleged misrepresentation could relate to, Plaintiffs cannot show that the stock price declined as a result of a *corrective* disclosure.[50]

Plaintiffs argue that the October 30, 2001 disclosure in fact related to the September verdict, because it demonstrated that Halliburton's anticipated asbestos liabilities were higher than generally reported. Plaintiffs argue that Lesar's statement on October 23 falsely suggested to the marketplace that Halliburton's prospective asbestos liabilities were under control, while the subsequent disclosure of the October verdict proved they were not. However, Halliburton's previous warning in its Form 10-K filings that a series of high asbestos verdicts remained a possibility directly contradicts this theory.[51]

---

misrepresentation actually moved the market is available to them.

[50] *See id.* There are two ways for the Plaintiffs to satisfy the Oscar requirement that the misrepresentation actually moved the market, and only one requires the existence of a corrective disclosure. If Nettesheim's model demonstrated an increase in Halliburton's stock price following Lesar's statement, one could argue that a corrective disclosure was not required. However, because Plaintiffs rely only on the decline in the stock price, this avenue is closed.

[51] For example, in Halliburton's 1999 Form 10-K filing with the SEC, it stated in the "Notes to Annual Financial Statements" section that "We *recognize the uncertainties of litigation and the possibility that a series of adverse court rulings could materially impact the expected resolution of asbestos related claims.* However, based on our historical experience with similar claims, the time elapsed since Dresser and its former divisions or subsidiaries discontinued sale of products containing

Plaintiffs do not satisfy *Greenberg*'s requirement of demonstrating that Halliburton made a misrepresentation that moved the market, which was related to the later correction.[52] Lesar stated that "there have been no adverse developments," not "there *will* be no adverse developments." Plaintiffs do not present opinions, much less any that reference "post-mortem data," to suggest that the market perceived the October 30, 2001 disclosure as having a *corrective* effect after any earlier *fraudulent* statement by Lesar.[53] Plaintiffs ignore the distinction between negative and corrective disclosures.[54] A negative disclosure does not necessarily have a corrective effect on the stock price.

Although Nettesheim concludes that the October 30, 2001 announcement had a negative effect on the stock price, she does not show that the resulting decline in the stock price was proximately caused by a prior misstatement. In fact, Nettesheim cites to the opinion of an A.G. Edwards analyst, who stated "[w]e expect a vigorous defense by [Halliburton's] [sic] and remain optimistic that the asbestos liability will remain under control." Thus, the market perception of the disclosure of the recent verdict was not that Halliburton fraudulently concealed its potential asbestos liabilities, but that

---

asbestos, and our understanding of the facts and circumstances that give rise to such claims, we believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations" (emphasis added).

[52] *Greenberg*, 364 F.3d at 661.

[53] *See Oscar*, 487 F.3d at 271.

[54] *See Flowserve*, 245 F.R.D. at 579.

the verdict was a surprising event against which Halliburton would vigorously defend. The market did not perceive the revelation of the verdict as evidence of prior fraud. As a result, the October 30 disclosure does not satisfy the requirements of loss causation.

In *Flowserve*, the plaintiffs argued that the "true financial condition" of the company was not accurately reflected by the company's prior earnings estimates.[55] Likewise, Plaintiffs argue that Lesar's statement suggested that Halliburton's asbestos liabilities were under control, which was not an accurate reflection of the "true asbestos condition" of the company. In *Flowserve*, the plaintiffs argued that subsequent financial statements demonstrated the company's "true financial condition;" here, Plaintiffs argue that subsequent asbestos verdicts revealed that Halliburton's true asbestos condition was not under control. The court rejected the argument in *Flowserve*, and this Court similarly rejects the argument here.[56]

For yet another reason, the October 30, 2001 disclosure is insufficient to establish loss causation: Plaintiffs have not separated the negative effect of the *new* information—the recent October verdict—from any corrective effect flowing from the revelation of increased *existing* asbestos exposure, if the corrective disclosure in fact related to Lesar's failure to reveal the September verdict. In short, Plaintiffs

---

[55] *Id.* at 573.

[56] *See id.* at 574 ("the 'true financial condition' theory, if accepted, threatens to undermine the objective of securities law and disregards precedent").

have not demonstrated loss causation as to the third asbestos disclosure.

D. December 4-7, 2001 Partial Corrective Disclosures

From December 4 through December 7, Halliburton disclosed a number of recent adverse asbestos jury verdicts in its Form 8-K SEC filings. On December 4, Halliburton filed a Form 8- K with the SEC, in which it disclosed that a Texas district court entered a judgment against Halliburton/ Dresser on a jury verdict rendered in September 2001.[57] This filing also disclosed that the same district court entered three additional judgments against Dresser in favor of 100 other asbestos plaintiffs, for an aggregate amount of $35.7 million, due to a an "alleged breach of a purported settlement agreement." Then, on December 7, 2001, Halliburton issued a press release detailing the recent asbestos verdicts rendered against it.[58]

Plaintiffs argue that the decline in Halliburton's stock price on December 4, 5, and 7 demonstrates loss causation because Halliburton

---

[57] *See supra* footnote 46.

[58] Plaintiffs' Complaint and reply brief each identify a "release detailing all the recent asbestos verdicts" issued by Halliburton on December 7, 2001 as the corrective disclosure. However, Nettesheim's report only refers to a Form 8-K filed by Halliburton on December 7, 2001, disclosing a $30 million verdict rendered by a Maryland jury on December 5, 2001, in favor of five plaintiffs and against Halliburton/Dresser, as the corrective disclosure. For the purposes of its loss causation analysis, the Court will refer to both of these disclosures collectively as the December 7 disclosure.

intentionally minimized the market's perception of its asbestos liabilities. However, Nettesheim's report appears to treat only the December 7 filing as a corrective disclosure, stating "[t]he cause of the large decline in Halliburton's stock price on December 7 was directly related to the disclosure regarding its asbestos exposure and subsequent market assessments at [sic] to the possible financial consequences to the Company of that asbestos exposure." Further, Plaintiffs' reply brief, while briefly noting the December 4 filing, only attempts to link the December 7 disclosure to prior representations that Halliburton's asbestos reserves were "adequate," "prudent," and "conservative." As a result, the Court will treat only the December 7 disclosure as an alleged corrective disclosure. However, even assuming that Plaintiffs properly alleged that the December 4 filing also qualified as a corrective disclosure, the Plaintiffs' loss causation argument must still fail.

With respect to the December 4 filing, Nettesheim's report states that "this [September] verdict was known to the public before December 4... an analyst for Salomon Smith Barney referred to this verdict in his November 9, 2001 report." Plaintiffs' Complaint also admits that "a few analysts did find out about the large Texas verdict," and cites to the same Salomon Smith Barney report. Information already known to the market cannot actually affect the stock price because an efficient market will not respond to information that is

already known.[59] As a result, the December 4 filing does not meet the loss causation requirements with respect to revelation of the September verdict. Additionally, the information about the judgment entered due to Dresser's breach of a purported settlement agreement qualifies as nothing more than new negative information, rather than a corrective disclosure, because there are no identifiable prior statements relating to any such settlement agreement.

Further, Plaintiffs cannot establish loss causation with respect to the December 4 disclosure because they have not shown that the filing had a *corrective* effect, as opposed to simply a negative effect, on the stock price.[60] If the release of negative information to the market "does not disclose the scheme [to drive up stock prices]," then the information "cannot correct the artificial inflation caused by the scheme."[61] Halliburton correctly argues that disclosures relating to asbestos verdicts, especially those revealed within days of judgment being entered, "merely confirmed the Company's previous and repeated warnings that a series of such results 'could materially impact' its expectations regarding resolutions of its asbestos claims." As previously stated, the Fifth Circuit is "unwilling to infer loss causation" from mere speculation of fraud.[62]

---

[59] *See id.* at 568. *60 See id.* at 579 (citing In re Initial Pub. Offering Sec. Litig., 339 F. Supp. 2d 261, 266 (S.D.N.Y. 2005)).

[61] *Id.*
[62] *Oscar*, 487 F.3d at 271.

Nettesheim opines that "the Company released several pieces of negative news, all of which were concerning the asbestos claims," but does not allege that this information had a corrective effect on the stock price. The Court cannot simply speculate about previous fraudulent statements that may or may not have inflated the stock price, and that were allegedly later corrected by this December 4 disclosure. The Plaintiffs must prove that the disclosure actually revealed to the market prior fraud.[63]

The only identifiable misstatement that could relate to the December 4 disclosure, even though not even identified by Plaintiffs with respect to the December 4 filing, would be Lesar's statement on October 23, 2001, that there had been no "adverse developments" with respect to the Harbison-Walker situation, which ignored the September verdict that had been rendered. But the December 4 disclosure actually provides a justification for the delay in announcing the September verdict: while the jury returned its verdict in September 2001, the Court did not enter judgment against Halliburton/Dresser until November 29, 2001. The verdict was revealed a few days later in the December 4 filing. As a result, the December 4 filing reveals nothing fraudulent to the market, and the Plaintiffs have failed to demonstrate loss causation with respect to the December 4 filing.

---

[63] *See Greenberg*, 364 F.3d at 666.

With respect to the December 7 disclosure, Plaintiffs again fail to distinguish between the negative and corrective effects of the disclosure.[64] To establish loss causation, Plaintiffs must show that it was "more probable than not" that the decline in stock price was caused by the corrective portion of the disclosure, rather than the new information.[65] For example, in Greenberg, the corrective disclosure regarding the interoperability of routers also stated the company had lost one of its biggest customers.[66] The plaintiffs in *Greenberg* failed to establish loss causation because they did not demonstrate that the decline in stock price was caused by the disclosure regarding interoperability, rather than the loss of a major customer.[67]

There are two distinct components driving the decline in stock price following the December 7, 2001 disclosure: the corrective effect resulting from the alleged prior minimization of asbestos liabilities; and the negative effect following the announcement of a new asbestos verdict, rendered on December 5. Plaintiffs must demonstrate that it was "more probable than not" that the subsequent decline in stock price was caused by a *correction* of a prior inflated value, rather than constituting a normal market response to a sizeable adverse verdict.[68]

The December 7, 2001 disclosure references the recent December verdict, which *was new*

---

[64] *See id.* at 665.

[65] *See id.*; *see also Flowserve*, 245 F.R.D. at 569.

[66] *Greenberg*, 364 F.3d at 666-67.

[67] *Id.* at 667.

[68] *See id.* at 666.

negative information, unrelated to previous disclosures, and also negative information about the September verdict, which was already known to the market.[69] Plaintiffs make no effort to distinguish any corrective effects from the effects of new negative information. With respect to mixed disclosures, the plaintiff's burden is heightened—Plaintiffs must separate actual corrective effects from effects of new negative events.[70] Here, Plaintiffs merely point to a decline in Halliburton's stock price following the mixed disclosure and then presume loss causation. The Fifth Circuit has made clear that this is insufficient to carry the Plaintiffs' burden at the class certification phase.[71]

Plaintiffs argue that the December 7, 2001 disclosure corrects Halliburton's previous representations of its estimated asbestos liabilities as "manageable" and "a nuisance."[72] However, construing an adjustment of potential liability as inherently fraudulent would discourage companies from addressing changed conditions, for fear of

---

[69] As stated above, Halliburton filed a Form 8-K with the SEC on December 4 disclosing the jury verdict rendered against Dresser in September 2001. Plaintiffs also admit that "this verdict was known to the public before December 4...an analyst for Salomon Smith Barney referred to this verdict in his November 9, 2001 report."

[70] *Greenberg*, 364 F.3d at 666.

[71] *Id.*

[72] For example, on September 4, 2001, Lesar stated that Halliburton "takes our exposure seriously," but that it sees asbestos claims against the company as a "manageable problem."

exposing themselves to securities fraud lawsuits.[73] Even though Halliburton had previously warned investors that its asbestos reserves could possibly be affected by a series of high verdicts, Plaintiffs argue that Halliburton's disclosure of these new asbestos verdicts shows that the company's previous estimates were fraudulent. As noted earlier, the Court will not infer fraud where there is no evidence of a scheme to inflate the stock price.[74] Plaintiffs do not cite any analyst reports or other information indicating that the market perceived the December 7, 2001 disclosure as revealing fraud, rather than just delivering bad news. Without any evidence of a fraudulent scheme, Plaintiffs' mere "well-informed speculation" is, again, insufficient to establish loss causation.[75]

Plaintiffs have failed to establish loss causation with respect to any of the four disclosures relating to asbestos liabilities. Therefore, the Court cannot certify a class with respect to the asbestos claims.

II. Accounting Methodology

With respect to the accounting claims, Plaintiffs argue that Halliburton changed its accounting methodology sometime in late 1997 or early 1998, inflating its balance sheet by recognizing

---

[73] *See Flowserve*, 245 F.R.D. at 577 (rejecting plaintiff's argument on the grounds that "in practical terms, if any corporate defendant ever files a restatement, it will virtually guarantee investors the ability to recoup for any loss").

[74] *Id.* at 579.

[75] *Oscar*, 487 F.3d at 271.

as revenue claims for cost overruns that had a low probability of collection. Plaintiffs claim that these actions were accompanied by changes to the language of Halliburton's financial statements, which did not comply with the requirements of generally accepted accounting principles, because the reasons for and impact of the changes were not adequately disclosed.

Plaintiffs allege in the Complaint that over a period of at least five years, dating back to 1993, "Halliburton had consistently represented that all *'anticipated' losses on contracts were provided for currently* and that revenues represented by cost overrun/change order charges, i.e., Unapproved Claims, *were recognized only when the customer had agreed to pay the Unapproved Claim.*"[76] Plaintiffs argue this means that:

> [B]efore an Unapproved Claim was resolved, the Company recorded losses caused by project cost overruns or unpaid Unapproved Claims. According to the company's stated accounting practice, only after the claim *was resolved with an agreement to pay* would the Company recognize revenue on the claim as an offset against the project's cost overruns.[77]

Plaintiffs claim that in late 1997 to early 1998, Halliburton secretly began to include in revenue amounts that customers had *not* agreed to

---

[76] Emphasis in original.

[77] Plaintiff's Fourth Amended Complaint, P. 137 (emphasis in original).

pay, where Plaintiffs claim the likelihood of collection was "dubious," to offset and conceal cost overruns and unpaid Unapproved Claims, and to pad profit margins. Plaintiffs argue that as a result Halliburton's financial statements, which stated that claims were included as revenue only "when collection is deemed probable," in fact contained amounts not likely to be collected, thereby overstating Halliburton's revenue and artificially inflating its stock price.

Plaintiffs cite Halliburton' s statement, from a press release issued December 21, 2000, that it was taking a $120 million charge in the fourth quarter of 2000 as the requisite corrective disclosure. Plaintiffs argue that this fourth quarter charge was the manifestation of Halliburton's previous inclusion in revenue of claims with a low probability of collection. The statement itself attributed $95 million of the expected $120 million loss to uncollectable cost overrun claims. It attributed the uncollectable cost overruns to labor disturbances in Venezuela and West Africa, and also mentioned that cost overruns on seven other projects had not been resolved in Halliburton's favor, as was originally anticipated.

The first major flaw in Plaintiffs' argument is that Plaintiffs fail to identify specific misrepresentations "that are capable of moving the market."[78] Nettesheim simply did not identify any specific misrepresentations that correlate to the December 21, 2000 disclosure.[79] Nettesheim merely

---

[78] *See Flowserve*, 245 F.R.D. at 571.

[79] *See Greenberg*, 364 F.3d at 666.

contends that the disclosure caused a company-specific decline in Halliburton's stock price that was unrelated to industry or market conditions. While *Nathenson* held that a plaintiff may rely on a decline in the stock price following a corrective disclosure to establish loss causation, *Greenberg* clarified that a plaintiff must still show the existence of earlier misrepresentations that actually moved the market.[80] Thus, when relying on a decline in stock price, Plaintiffs must still relate the disclosure causing the fall to an earlier misrepresentation that was corrected by the disclosure. Plaintiffs have identified no such earlier misrepresentation.

Along with failing to identify an earlier misrepresentation, Plaintiffs have commingled evidence of inflation of the stock price during the class period with impermissible evidence of inflation of the stock price prior to the class period. Specifically, any alleged misrepresentations made by Halliburton that may have actually moved the market could have occurred before the class period. If Halliburton changed its accounting practices in late 1997, as Plaintiffs contend, then the financial statements in late 1997 and 1998 would have inflated the stock price if they included in revenue claims not likely collectable. The class period in this case commences on June 3, 1999. Without accounting for possible inflation prior to the class period, any later financial statements reasserting the accounting methodology are at least partially and unquantifiably confirmatory in nature.[81]

---

[80] *Id.*; *Nathenson*, 267 F.3d at 418-19.

[81] *See Greenberg*, 364 F.3d at 665-66.

Confirmatory statements cannot support a showing of loss causation. Plaintiffs do not address the possibility that inflation in the stock price would have occurred, at least in part, before the beginning of the class period.

Plaintiffs attempt to meet the Greenberg requirement of pinpointing earlier misrepresentations that "actually moved the market" by citing language found in one of Halliburton's financial statements, and then repeated in later financial statements. The language of these financial statements is addressed in greater detail below. However, Plaintiffs fail to distinguish between confirmatory and non-confirmatory statements within these documents. The only alleged misrepresentation during the class period cited by Plaintiffs comes from Halliburton's 1999 Annual Report, issued in early April 2000:

> All known or anticipated losses on contracts are provided for currently. Claims and change orders which are in the process of being negotiated with customers for extra work or changes in the scope of work are included in revenue when collection is *deemed probable*.

This passage cannot form the basis for an actionable misrepresentation for a number of reasons.

> In *Flowserve*, Judge Boyle rejected "re-publications of financial statements, earnings projections, and confirmation of debt covenant compliance" as actionable

> statements capable of moving the market, because such material is confirmatory in nature.[82] Here, the republication of Halliburton's accounting methodology in its financial statements is similarly confirmatory.[83] Halliburton's 1998 Annual Report identically stated that "[a]ll known or anticipated losses on contracts are provided for currently." The 1998 Annual Report was filed on March 23, 1999— more than two months before the beginning of the class period. The alleged inflationary effects caused by the "all known or anticipated losses" language therefore occurred before the class period.

Plaintiffs do not allege that specific losses on contracts were incurred between the 1998 and 1999 annual reports, so that the 1999 report was somehow materially different from the first. The market will not "double-count" information it already knows.[84] Plaintiffs make no effort to distinguish between the confirmatory language and other non-confirmatory language in the 1999 Annual Report, which precludes a finding of loss causation attributable to the language regarding current provision for losses.

Comparing the plain language of the 1999 Annual Report with the language of the 1998 Annual Report reveals that one additional sentence was added to the 1999 filing. The 1999 filing states that "[c]laims and change orders which are in the process

---

[82] *See Flowserve*, 245 F.R.D. at 571.

[83] *See Greenberg*, 364 F.3d at 665-66.

[84] *Flowserve*, 245 F.R.D. at 568.

of being negotiated with customers, for extra work or changes in the scope of work are included in revenue when collection is deemed probable," immediately after the "known or anticipated losses" language appears. However, Plaintiffs have not explained why this "deemed probable" language is not substantively encompassed within the previous confirmatory statement about "known or anticipated losses." Instead, Plaintiffs merely argue that as early as July 1999, "significant cost overruns and unapproved claims. . . were undermining Halliburton's earnings," without distinguishing the content and effect of the new language in the 1999 Annual Report from the "known or anticipated losses" language found in the earlier financial statements.

Therefore, Plaintiffs' position runs afoul of *Greenberg*'s requirements in two respects. First, Plaintiffs fail to identify any specific misrepresentation that allegedly inflated the stock price beginning in July 1999. Instead, Plaintiffs offer only a conclusory statement that such inflation occurred. In doing so, Plaintiffs attempt to prove loss causation without ever showing that the company made material misrepresentations that affected the market, like those present in *Greenberg*.[85] It is insufficient to establish loss causation simply by proving that the stock price declined after negative news, like that of a fourth quarter charge, was released.

---

[85] *Greenberg*, 364 F.3d at 661.

Second, confirmatory positive statements do not actually affect the market.[86] The class period began on June 3, 1999. Plaintiffs allege that Halliburton's stock price was inflated in July 1999, without identifying a specific cause for that inflation. Any inflation could likely have been caused by an alleged misrepresentation made before the class period. To establish loss causation, Plaintiffs must cite actual misrepresentations made during the class period that were not confirmatory.[87]

Even if the Court were to look only at the 1999 Annual Report, the *only* alleged falsehood cited by Plaintiffs is in the fine print about accounting practices which had appeared in a prior financial statement, that "[a]ll known or anticipated losses on contracts are provided for currently." That is a "classic example[s] of confirmatory information."[88] Here, nothing in the record explains in what manner the language in the 1999 Annual Report is materially different from statements in any of Halliburton's previous financial statements with regards to misrepresenting Halliburton's accounting practices. The additional language in the 1999 Annual Report does not significantly alter the nature of the assurances found in the 1998 Annual Report, or in other prior financial statements. The comparison is analogous to false public announcements about the interoperability of routers that were present in *Greenberg*.[89]

---

[86] *Id.* at 665-66.

[87] *See id.*

[88] *Flowserve*, 245 F.R.D. at 571.

[89] *See Greenberg*, 364 F.3d at 660.

Plaintiffs have not shown loss causation for a third critical reason: the alleged corrective disclosure on December 21 does not "specifically reveal" to the market any misrepresentation or fraud that may have appeared in Halliburton's prior financial statements.[90] On December 21, 2000, Halliburton issued a press release stating that $95 million of its $120 million fourth quarter loss was attributable to cost overruns. In *Flowserve*, Judge Boyle rejected the plaintiffs' argument that a failure to meet earnings forecasts rendered previous statements about historical financials internal auditing controls fraudulent.[91] While it is possible for the fraud to be revealed to the market indirectly, the plaintiff must make such a showing in the loss causation analysis.[92]

Halliburton's loss in the fourth quarter of 2000 does not establish loss causation without proof of a revelation of fraud by Halliburton or an indirect revelation of fraud to the market.[93] Halliburton's disclosure does not directly reveal a fraud; the disclosure reiterates that Halliburton had believed that collection of the cost overruns was probable and states that external factors, such as labor unrest in Venezuela and Africa, had contributed to the losses.

Where fraud is revealed to the market *indirectly*, plaintiffs must show that the market recognized a relationship between the disclosure and

---

[90] *See id.* at 666.
[91] *Flowserve*, 245 F.R.D. at 578-79.
[92] *Id.* at 579.
[93] *See id.* at 578-79.

the indirectly-revealed fraud.[94] In this case, the Plaintiffs must demonstrate that the market recognized a relationship between the December 21, 2000 disclosure of the $120 million fourth quarter charge, attributed to cost overruns and labor unrest, and the 1999 Annual Report that stated:

> All known or anticipated losses on contracts are provided for currently. Claims and change orders which are in the process of being negotiated with customers for extra work or changes in the scope of work are included in revenue when collection is deemed probable.

Plaintiffs make no such showing here. There is no evidence that the market perceived a relationship between this fourth quarter charge and the new language in the 1999 Annual Report. Plaintiffs offer no evidence that Halliburton did not believe it was complying with proper accounting practices, nor do Plaintiffs contend that the market recognized such evidence and linked it to the December 21, 2000 disclosure, or to the 1999 Annual Report. Plaintiffs merely ask the Court to infer fraud from Halliburton's substantial fourth quarter charge.[95] This the Court cannot do.

The Plaintiffs' argument is simply a nuanced version of the "true financial condition" argument that Judge Boyle rejected in *Flowserve*.[96] Plaintiffs argue that Halliburton's financial statements, in the

---

[94] *Id.*

[95] *See Oscar*, 487 F.3d at 271.

[96] *Flowserve*, 245 F.R.D. at 573.

aggregate, misrepresented the true financial condition of the company and that the announcement of a fourth quarter loss served as a corrective disclosure of the company's true financial health. However, Plaintiffs cannot establish loss causation merely by pointing to lower financial projections and then concluding without proof that Halliburton's previous revenue statements were fraudulent. The burden of proving loss causation cannot be satisfied with such "well-informed speculation."[97]

The Fifth Circuit has made plain that securities fraud suits are not an "insurance policy for investors," whereby Plaintiffs can simply "surmise[] what the market knew . . . with the benefit of hindsight and from the comfort of a litigation armchair."[98] In light of the failure of Plaintiffs to satisfy their burden on loss causation, class certification is denied with respect to the accounting methodology claim.

III. The Dresser Merger

Plaintiffs argue that in early 1998, Halliburton misstated the benefits of its acquisition of Dresser Industries, in order to inflate the price of Halliburton stock. Plaintiffs cite four disclosures as correcting the inflation caused by the alleged misstatements regarding Dresser, each addressed in greater detail below. First, on October 4, 1999, "Halliburton unexpectedly warned that its 1999

---

[97] *Oscar*, 487 F.3d at 271.

[98] *Id.* at 574.

third-quarter earnings would be less than the previous estimates," caused in part by the lower than expected profits from the Dresser business units. Second, on January 5, 2000, two investment analysts lowered their estimates of Halliburton's annual earnings for 2000 and 2001, caused in part by "less powerful synergies from the Dresser merger." Third, on October 24, 2000, Halliburton CEO Lesar told analysts in a conference call that Halliburton planned a massive restructuring in light of operational problems and management inefficiencies caused by the Dresser merger. Fourth, Halliburton officially unveiled the restructuring plan on December 21, 2000, the same day it announced that it expected to incur a $120 million dollar charge in the fourth quarter of 2000, $95 million of which was attributed to accounting claims adjustments. The remaining $25 million in losses was attributed to the costs of reorganization after the Dresser merger.

A. October 4, 1999 Disclosure

Plaintiffs have not established loss causation with respect to the October 4, 1999 disclosure because the underlying alleged misrepresentations are confirmatory and thus not actionable.[99] Plaintiffs point to statements made on July 22, 1999, and September 13, 1999, in which Halliburton executives estimated annualized savings of $500 million from the Dresser merger, as misrepresentations that actually moved the market.

---

[99] *See Greenberg*, 364 F.3d at 665-66.

Defendants correctly argue that these alleged misrepresentations were confirmatory, and thus not actionable, because on March 1, 1999, prior to the class period, Halliburton stated that: "[c]osts from the merger and the downturn in activity should yield over $500 million by the end of 1999..." An efficient market will not "double-count" the effects of a confirmatory positive statement, and inflate the stock price twice.[100] Plaintiffs argue that the March 1999 statement does not render the later statements confirmatory because it encompassed the Dresser integration as well as a "downturn," and thus did not *solely* address the Dresser merger.

The Court is not persuaded that the March 1999 statement and the later alleged misrepresentations about the Dresser merger are materially different such that the market would respond to the later statements about saving $500 million after it already responded to the March 1999 statement. Plaintiffs have provided no evidence that the content of the March 1999 statement would have caused the market to respond twice to the same information about cost savings, just because it also noted a "downturn" when identifying the source of the $500 million savings. Thus, Plaintiffs cannot establish loss causation with respect to this issue because the actionable misrepresentations are confirmatory in nature.

Also, while Plaintiffs argue that attributing the savings to the Dresser merger alone somehow changed the market's perception of the Dresser

---

[100] *Flowserve*, 245 F.R.D. at 568.

merger, the alleged corrective disclosure also reveals nothing *fraudulent* about the statements.[101] Nettesheim states in her report that "[t]his is an instance where the Company released negative news, which concerned the lack of benefits arising from the Dresser merger." However, the mere release of negative information is simply not enough to prove that the previous positive statements were fraudulent. Plaintiffs cannot establish loss causation by speculating about fraud. A failure to meet earnings estimates does not show to the market the existence of a fraudulent scheme.[102] Since there is no evidence supporting an inference of fraud, and because the alleged misrepresentations were confirmatory in nature, the Court will not certify the class based on the October 4, 1999 disclosure.

B. January 5, 2000 Corrective Disclosure

The Court rejects class certification with respect to this disclosure because Plaintiffs again fail to show loss causation. Plaintiffs rely on two analysts' reduction of Halliburton's earnings estimates on January 5, 2000, in alleging loss causation for the stock decline that occurred that particular day. Plaintiffs allege that "[l]ooking behind the analysts' conclusions to the underlying data, Ms. Nettesheim concluded that 'a significant portion of the stock price decline on January 5, 2000 was caused by information that partially corrected

---

[101] *See Greenberg*, 364 F.3d at 666.

[102] *Flowserve*, 245 F.R.D. at 579 (distinguishing such statements as negative rather than corrective disclosures).

investors' erroneous assessments of the profitability of overseas construction projects and the benefits of the Dresser merger." Plaintiffs rely on the "July and September misrepresentations" which this Court in its earlier analysis found to be confirmatory and thus not actionable. Plaintiffs point to no misrepresentations in particular following the October 4, 1999 disclosure. Halliburton correctly argues that "[t]he first step is to isolate the alleged actionable, nonconfirmatory misstatements." However, in this case Plaintiffs argue that the analysts' downgrading of Halliburton stock amounts to a new corrective disclosure without identifying any actionable misrepresentation.

Plaintiffs rely on the reports of two analysts: Carol Lau of Brown Brothers Harriman & Co., and K. Simpson of Merrill Lynch. K. Simpson attributed his downward adjustment to "reduced expectations for offshore construction results, a reduced growth estimate for oilfield spending outside North America, and less powerful synergies from the Dresser merger than... envisioned." Plaintiffs cite no statements by Lau explaining her adjustment, and rely only on the existence of the adjustment as evidence of a corrective disclosure.[103]

---

[103] Nettesheim alludes to a "partial disclosure related to the Company's booking of unapproved claims on fixed-price contracts and the lack of benefits realized from the Dresser merger as revealed in a conversation with analyst Carol Lau," but cites no source for or further information about this alleged conversation. The Court cannot establish a specific alleged misrepresentation or corrective disclosure without more.

Plaintiffs fail to establish loss causation with respect to this "disclosure." First, Plaintiffs fail to cite any actionable misrepresentation that correlates to it.[104] Plaintiffs cannot establish loss causation without such a showing. Instead, Plaintiffs rely on the same confirmatory statements that were supposedly corrected by the October 4, 1999 disclosure. However, Plaintiffs cannot establish loss causation by citing confirmatory information. Just as Plaintiffs' argument fails with respect to the October 4, 1999 disclosure, it also fails here.

Additionally, Plaintiffs do not cite any public release as correcting a misrepresentation, but rather point only to the analysts' adjusting their own earlier estimates of Halliburton's earnings. The Court cannot determine whether this "disclosure" specifically revealed a fraudulent scheme because Plaintiffs provided limited evidence about why these analysts changed their forecasts, and no evidence that the market perceived these adjustments as evidence of prior fraud.[105]

In *Oscar*, the court rejected the plaintiffs' approach of relying solely on analysts' opinions to show that a specific disclosure corrected a prior misrepresentation.[106] The *Oscar* court required that the plaintiffs' expert make some sort of "empirically-based showing that the corrective disclosure was more than just present at the scene."[107] Plaintiffs

---

[104] *See Greenberg*, 364 F.3d at 666.

[105] *See id.*

[106] *Oscar*, 487 F.3d at 261.

[107] *Id.*

argue that in this case the two analysts' adjustments of their financial estimates prove that there must have been a corrective disclosure somewhere.

Plaintiffs offer no evidence of a fraudulent scheme, as required by *Oscar*. Plaintiffs cannot even claim to have the "well-informed speculation" which the court rejected in *Oscar*.[108] In *Oscar*, the plaintiffs also relied solely on analyst opinions, but the analyst commentary in *Oscar* at least provided concrete examples of disclosures that could potentially be perceived as corrective by the market.[109]

Plaintiffs simply speculate that Simpson's earnings adjustment was due to the Dresser merger. Although Simpson mentioned the Dresser merger as one of three reasons for his adjustment, Plaintiffs make no effort to distinguish between the Dresser issue and the two other reasons for the adjustment.[110] Nettesheim concedes that she did not distinguish between the effects of Simpson's concerns regarding oilfield spending and those regarding the Dresser merger. Furthermore, Nettesheim admits, "I do not have Simpson's breakout of his reduction of 2000 and 2001 earnings estimates between the segments..." As a result, Nettesheim failed to differentiate between not only the stated reasons for the rating cut, but also failed to account for long-term versus short-term

---

[108] *Id.*

[109] *Id.* at 270 (the analysts revealed that the company adjusted the line count between billing and order management platforms).

[110] *See Greenberg*, 364 F.3d at 666.

adjustments to the earnings estimates in her analysis. This approach falls well short of Oscar's requirement that the Plaintiffs' expert make an empirically-based showing that the corrective disclosure was more than just present at the scene.[111]

The *Oscar* court's admonition that the class certification decision "bears due-process concerns for... [the] defendants" is especially pertinent here.[112] There, the court explained, "an empirical inquiry into loss causation better addresses these [due process] concerns than an impenetrable finding akin to a reasonable man assessment. And analyst speculation about materiality, while better informed than a layman, more closely resembles the latter."[113] This Court cannot simply infer loss causation without, at the very least "reference to... post-mortem data [the analysts] have reviewed or conducted" to support the determination, in this case, that Simpson's earnings adjustment was due to the Dresser merger. To hold otherwise would result in exactly the type of "impenetrable finding" the Fifth Circuit has warned against.

Simply put, Plaintiffs' burden of identifying corrective disclosures is not satisfied by citing the mere existence of an earnings adjustment by outside analysts. Analysts unaffiliated with Halliburton could have previously overestimated Halliburton's performance, and then a subsequent modification

---

[111] *See Oscar*, 487 F.3d at 261.
[112] *Id.* at 271.
[113] *Id.*

would certainly not qualify as a corrective disclosure. Once more, Plaintiffs attempt to trigger the presumption of reliance by simply offering evidence of a decrease in price following the release of negative information,[114] without citing any actionable misrepresentation or disclosure by Halliburton. Plaintiffs' reliance on the decline in Halliburton's stock price after analysts reduced their forecasts does not establish loss causation.

C. October 24, 2000 Corrective Disclosures

Plaintiffs have not established loss causation with respect to the October 24, 2000 disclosure. Unlike the prior disclosure, Plaintiffs satisfy the Greenberg requirement by identifying what they allege to be a prior misstatement.[115] Plaintiffs cite a letter from Dick Cheney included in the 1999 Annual Report, released in April 2000, which told investors that "[t]he merger with Dresser Industries is now behind us. The potential rewards to our shareholders are vast." Then on October 24, 2000, Lesar stated that Halliburton planned to restructure its construction operations due to operational problems, management inefficiencies, and excessive costs related to the Dresser merger.

However, Plaintiffs fail to establish loss causation because nothing in the alleged corrective disclosure "specifically reveal[s]" to the market any

---

[114] *See Greenberg*, 364 F.3d at 665.

[115] *See id.* at 666.

fraudulent scheme.[116] Cheney's statement that the Dresser merger was "behind us" is not proven fraudulent based only on the fact that Halliburton restructured its construction operations six months later. Just as a failure to meet earnings expectations does not reveal misstatements in previous financial documents, a failure to meet business expectations will not reveal that prior optimistic expectations were *fraudulent*. Indeed, it is entirely possible that six months after the announcement of the completion of the Dresser acquisition, Halliburton executives realized that the business units were not functioning as well as anticipated. The burden falls on Plaintiffs to show that Lesar's statement communicated to the market that Cheney's previous statement about the Dresser merger was fraudulent, in order to prove loss causation. Because Plaintiffs fail to make such a showing, they have not established loss causation with respect to the October 24, 2000 disclosure.

D. December 21, 2000 Disclosure

Plaintiffs allege that Halliburton's official unveiling of its Dresser restructuring plan on December 21, 2000, the same day it announced that it expected to incur a $120 million dollar charge in the fourth quarter of 2000, constitutes an actionable corrective disclosure. The disclosure blamed $95 million of the loss on cost overruns on fixed-price contracts, leaving $25 million attributable to the expected costs of the Dresser reorganization.

---

[116] *Id.*

Plaintiffs have not established loss causation with respect to this disclosure. The announcement of the expected costs of reorganization did not "specifically reveal[]" to the market any fraudulent scheme.[117] The announcement of the loss attributable to restructuring is entirely consistent with Halliburton's October 24, 2000 statement that it planned to restructure. Despite Plaintiffs' claim that Halliburton "again surprised the market," Nettesheim recognized that the announcement "does not appear to have been a surprise or a concern to analysts as some charge was expected after the Company announced the restructuring plan in its third quarter earnings conference call."

The market will not "double-count" the negative effects of a restructuring plan that had already been made public. Plaintiffs do not argue that the formal announcement of the plan further changed the market's perception of Halliburton or that the expected cost of the restructuring had previously been fraudulently misrepresented. Any inflation in the value of Halliburton's stock price caused by Cheney's alleged misrepresentation would have been removed by the initial disclosure of the planned restructuring in October 2000.

Additionally, the expected cost of the restructuring qualifies as a negative, as opposed to a *corrective* disclosure. The release of negative information to the market does not necessarily have a corrective effect. The information about the cost of restructuring did not *correct* any previously released

---

[117] *See Greenberg*, 364 F.3d at 666.

information; it was simply negative information relating to the costs of the Dresser merger. In fact, this information actually comported with and elaborated upon Halliburton's prior disclosure that it planned to restructure the Dresser business units.

Because the announcement of the costs of restructuring confirmed the market's prior knowledge that Halliburton was planning to restructure, this announcement cannot support a finding of loss causation. Any corrective effect upon the price of Halliburton stock would have occurred with the disclosure on October 24, 2000, not with the formal confirmation two months later. Therefore, the Court will not certify a class with respect to the December 21, 2000 disclosure.

CONCLUSION

Plaintiffs have failed to establish loss causation with respect to any of the three issues in this lawsuit. For that reason, the Court will not certify the class. The Court reiterates that the Fifth Circuit has placed an extremely high burden on plaintiffs seeking class certification in a securities fraud case. Even though the Court finds that all other elements required for class certification under Rule 23 have been met in this case, it is unable to certify the class because of Plaintiffs failure to meet this stringent loss causation requirement.

SO ORDERED.

Pursuant to FED. R. CIV. P. 23(f) and FED. R. APP. P. 5, Lead Plaintiff brings this Petition for Permission to Appeal the District Court's November 4, 2008, Order Denying Lead Plaintiff's Motion to Certify of Class (hereinafter "Order").[1]

I. INTRODUCTION

In *Oscar Private Equity Investors v. Allegiance Telecommunications, Inc.*, 487 F.3d 261, 269 (5th Cir. 2007) (hereinafter "*Oscar*"), this Court held that "loss causation must be established at the class certification stage." In this case, the District Court denied Lead Plaintiff's motion for class certification solely because it felt constrained to do by *Oscar*, which the trial court held imposed an "extremely high burden on plaintiffs seeking class certification in a securities fraud case." Order at 37. Applying *Oscar*, the District Court effectively required Lead Plaintiff to prove its case at the class certification stage. This misreading of *Oscar* precludes many—if not all—securities class actions. This Court should grant Lead Plaintiff's petition for interlocutory appeal to clarify the novel and unsettled question of how to conduct a loss causation analysis at the class certification stage, before fact discovery is complete, and reverse the lower court's erroneous denial of class certification.

II. FACTUAL BACKGROUND

This is a securities class action brought on behalf of all people and entities that purchased

---

[1] A copy of the District Court's November 4, 2008 Order is attached as Tab A to Lead Plaintiff's Appendix.

common stock of Halliburton Company ("Halliburton") between and including June 3, 1999, and December 7, 2001 (the "Class Period"). The Fourth Consolidated Amended Complaint[2] alleges that during the Class Period Defendants violated §§ 10(b) and 20(a) of the Securities Exchange Act of 1934, 15 U.S.C. § 78a *et seq.*, by deliberately falsifying Halliburton's financial results and deliberately and/or recklessly misleading the public about the financial condition and success of Halliburton's businesses, including its construction operations, the benefits of its acquisition of Dresser, Inc., the extent of its exposure to asbestos liability, and its future business and financial prospects.

On September 17, 2007, Lead Plaintiff filed its class certification motion. Defendants filed their response on November 16, 2007, and Lead Plaintiff filed its Reply on December 21, 2007 (hereinafter, "Reply").[3] A hearing was held on the Motion on March 21, 2008. On November 4, 2008, the District Court issued an order denying Plaintiffs' Motion to Certify, and explained:

> The sole issue in dispute is the application of the requirement that, in a securities fraud action, loss causation be proven at the class certification stage. Absent this requirement, the Court would certify the class. However, having considered the parties' extensive briefing, oral argument, and the applicable

---

[3] A copy of Lead Plaintiff's Reply is attached as Tab B to Lead Plaintiff's Appendix.

> law, the Court is of the opinion that Plaintiffs have not demonstrated loss causation as to any of their claims.

Order at 1 (footnote omitted). The court declared that it was required to enforce an "exceedingly high burden on Plaintiffs at an early stage in the litigation[.]" *See id.* at 3. The court "reiterate[d] that the Fifth Circuit has placed an extremely high burden on plaintiffs seeking class certification in a securities fraud case," *id.* at 37, but said it was "bound to follow the Fifth Circuit's precedent." *Id.* at 4.

III. QUESTION PRESENTED

The question presented is whether the District Court erred in denying the Lead Plaintiff's Motion for Class Certification because it improperly applied the loss causation analysis required by *Oscar*. In the alternative, the question is whether the holding in *Oscar* as to loss causation should be clarified or modified or whether District Court's decision is clearly erroneous.

IV. RELIEF SOUGHT

Lead Plaintiff requests permission to immediately appeal the District Court's November 4 Order. Ultimately, Lead Plaintiff seeks an order from this Court reversing the District Court's erroneous Order, and either certifying the proposed class or remanding this case for further proceedings.

V. AUTHORIZATION AND JUSTIFICATION FOR INTERLOCUTORY APPEAL

Under FED. R. CIV. P. 23(f), "[a] court of appeals may permit an appeal from an order granting or denying class-action certification ... if a petition for permission to appeal is filed with the circuit court within 10 days after the order is entered." While "[t]he court of appeals is given unfettered discretion whether to permit the appeal," the Advisory Committee notes to Rule 23(a) indicate that "[p]ermission is most likely to be granted when the certification decision turns on a novel or unsettled question of law, or when, as a practical matter, the decision on certification is likely dispositive of the litigation." FED. R. CIV. P. 23(f) Advisory Committee Notes, 1998 Amendments. The Fifth Circuit has previously applied these factors to grant a request to appeal a class certification decision under Rule 23(f). *See Regents of Univ. of Cal. v. Credit Suisse First Boston (USA), Inc.*, 482 F.3d 372, 380 (5th Cir. 2007). Some circuits also allow interlocutory review where the certification decision is "clearly erroneous." *See, e.g., Chamberlan v. Ford Motor Co.*, 402 F.3d 952, 959 (9th Cir. 2005); *In re Lorazepam & Clorazepate Antitrust Litig.*, 289 F.3d 98, 105 (D.C. Cir. 2002); *Newton v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154, 164 (3d Cir. 2001).

In this case, the criteria set forth in the Advisory Committee notes are met, and the decision is also clearly erroneous. *Oscar* requires district courts to conduct a loss causation analysis at the class certification stage, when little to no fact

discovery has been conducted. How this should be done is a novel, unsettled question of law, because the loss causation analysis was traditionally performed *after* fact discovery, and the Fifth Circuit has not clarified the *Oscar* holding or explained to the district courts how to conduct a loss causation analysis when fact discovery has not been completed. The result has been confusion among the trial courts, and an erroneous decision here, where the burden of proof on a plaintiff at class certification was conflated with the plaintiff's burden of proof at summary judgment. Requiring plaintiffs to meet summary judgment burdens of proof at the class certification stage without the benefit of discovery is a nearly impossible feat; indeed, such a requirement could effectively preclude securities class actions in the Fifth Circuit. Without any further guidance from the Court, the application of this new, unsettled standard by the district courts is likely to result in the issuance of other incorrect or inconsistent decisions.

In addition, the District Court's decision is, as a practical matter, dispositive of the litigation, as it is prohibitively expensive for Lead Plaintiff to proceed to final judgment on its individual claims. The decision is also clearly erroneous because it erroneously disregards much of Lead Plaintiff's evidence of loss causation. Since "[t]his is a legally and practically significant class certification decision," *see Regents of Univ. of Cal.*, 482 F.3d at 379, it is proper for the Court to allow the Lead Plaintiff to immediately appeal the District Court's order.

A. The District Court's Certification Decision Turns On a Novel or Unsettled Question of Law.

1. The proper application of *Oscar* presents a novel and unsettled question of law.

The proper standard to be applied in a loss causation analysis at the class certification stage is a novel and unsettled question of law. In denying Lead Plaintiff's motion, the District Court applied an improper loss causation analysis, holding that a plaintiff in a securities class action must prove the fraudulent intent behind a defendant's statements at the class certification stage. For instance, in discussing why Lead Plaintiff has failed to prove loss causation with respect to Halliburton's statement regarding its accounting methodology on its construction contracts, the Court notes that "Plaintiffs offer no evidence that Halliburton did not *believe* it was complying with proper accounting practices" when it made the original, allegedly-fraudulent statements regarding the applications of Halliburton's accounting policies. Order at 28 (emphasis added); *see* also *id.* at 10 ("Plaintiffs must provide actual evidence of an unlawful scheme which inflated the stock price."). Such holdings misinterpret *Oscar* and conflates the Plaintiff's burden at the class certification and summary judgment stages.

Oscar should not be interpreted as requiring a plaintiff to prove its case-in-chief at the class certification stage; instead, *Oscar* requires "plaintiffs

to establish loss causation in order to trigger the fraud-on-the-market presumption." *Oscar*, 487 F.3d at 265. In other words, in order to trigger a presumption of reliance in 10b-5 actions, a plaintiff must prove "that the misstatement *actually moved* the market." *Id.* (emphasis in original). Under *Oscar*, however, a plaintiff need not prove at the class certification stage that the initial positive statement was either false or fraudulent; rather, a plaintiff need only *plead* these allegations at this early stage in the litigation, and connect them to the corrective disclosure:

> In such multi-layered loss-causation inquiries, the legal standard, at least, is well established: *Greenberg* requires that plaintiffs prove "(1) that the negative 'truthful' information causing the decrease in price is related to an *allegedly* false, non-confirmatory positive statement made earlier and (2) that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline."

Id. at 266 (citing *Greenberg v. Crossroads Sys., Inc.*, 364 F.3d 657, 666 (5th Cir. 2004)) (emphasis added).

In its order, the District Court overlooks the fact that when the Court states in *Oscar* that it is "unwilling to infer loss causation without more," *id.* at 271, the Court was discussing the steps a plaintiff must take to adequately connect the corrective disclosure to the drop in stock price; the Court did not hold that a plaintiff must prove the fraudulent

intent behind the initial misrepresentation in order to obtain class certification. Yet the District Court cites this sentence from *Oscar* in support of that holding. For instance, Plaintiffs showed that the August 9, 2001, statement—Halliburton's second quarter 2001 10-Q in which Halliburton increased its reserves for asbestos liability from $60 million to $124 million only two weeks after the Company had publicly assured the public that its current reserves were adequate—was a corrective disclosure of a prior misstatement and was also the only news item that could explain the 5.2% company-specific stock price decline that day. Reply at 21. The Court, however, found Lead Plaintiff had not established loss causation because "Plaintiffs have not demonstrated that the August 9 disclosure *revealed a scheme* to inflate stock prices, as opposed to merely revealing a change in the circumstances." Order at 12. Accordingly, the Court concluded, it "'is unwilling to infer loss causation' from mere speculation of fraud." *Id.* In doing so, the District Court went beyond the requirements of *Oscar* by requiring the plaintiff to prove "*a scheme* to inflate stock prices," before discovery had even been conducted. *See id.*

The District Court also erred in relying on *Ryan v. Flowserve Corp.*, 245 F.R.D. 560 (N.D. Tex. 2007) (hereinafter "*Flowserve*"), which was decided at the summary judgment—and not class certification—stage. *Flowserve*, 245 F.R.D. at 567. The plaintiff in *Flowserve* was appropriately required to meet the burden of proof necessary to survive summary judgment. Since Lead Plaintiff did not have the benefit of this extensive discovery prior

to filing its Motion to Certify Class, Lead Plaintiff should not face, and *Oscar* should not be construed to impose, the same burden of proof as faced the plaintiff in *Flowserve* who was confronting a motion for summary judgment. The District Court's erroneous reliance on *Flowserve* is indicative of the unsettled nature of the new legal framework established in *Oscar*.

While the Court in *Oscar* claimed that the decision did not "improperly shift[] the burden[] from a defendant's right of rebuttal to a plaintiff's burden of proof," *Oscar*, 487 F.3d at 265, the District Court's interpretation of *Oscar* did just that. It required Lead Plaintiff to prove most of its claims prior to completing discovery. While Oscar raised the bar in securities class actions, it did not raise the bar this high.

In a further indication that application of *Oscar* involves a novel and unsettled question of law, the Court also misconstrued Fifth Circuit precedent to set an impossibly high standard for the linkage that is necessary to establish that a disclosure that corrects a prior misrepresentation (or omission) constitutes a corrective disclosure. For instance, the trial court repeatedly found corrective disclosures invoked by Lead Plaintiff did not constitute corrective disclosures because they did not "specifically reveal[]" any misrepresentation or fraud. *See, e.g.*, Order at 9, 27, 32, 35, 36 (*quoting Greenberg*, 364 F.3d at 666); *see also* Order at 19 ("If the release of negative information 'does not disclose the scheme [to drive up stock prices],' then the information 'cannot correct the artificial inflation

caused by the scheme.'"). Under that standard, almost nothing short of a confession would constitute a corrective disclosure.

Other district courts in the Fifth Circuit have issued opinions that conflict with the District Court's holding, underscoring the confusion in the district courts as to how to apply *Oscar*. These district courts have found that a plaintiff need only *allege* a previous fraudulent misrepresentation, not *prove* fraudulent intent, at the class certification stage. *See, e.g., In re OCA, Inc. Sec. & Derivative Litig.*, No. 05-2165, 2008 WL 4681369, at *10 (E.D. La. Oct. 17, 2008) ("disclosures [must] correct[] prior information *allegedly* misrepresented or omitted by defendants.") (emphasis added); *Flowserve*, 245 F.R.D. at 570 (plaintiff failed to "adequately demonstrate[e] the relation between the *alleged* fraud and the *alleged* corrective disclosures") (emphasis added); *In re Seitel, Inc. Sec. Litig.*, 245 F.R.D. 263, 278 (S.D. Tex. 2007) ("fraud-on-the-market plaintiffs must demonstrate actual movement/loss causation in a stock's price stemming from an *alleged* misrepresentation.") (second emphasis added).

District courts have also been inconsistent in their reliance on analyst reports in their loss causation analysis. For example, while the District Court in this case gave no weight to analyst reports in its order, *see* Order at 34 ("Simply put, Plaintiffs' burden of identifying corrective disclosures is not satisfied by citing the mere existence of an earnings adjustment by outside analysts."), another court in the same district has relied on them. *See, e.g., Fener v. Belo Corp.*, 560 F. Supp.2d 502, 506-07 (N.D. Tex.

2008) (analyst reports "undermine[d] plaintiff's contention" that multiple news pieces contained in one announcement were all related to the allegedly false, non-confirmatory positive statement previously made by the defendant). Analyst reports are helpful to elucidate the market reactions and the reasons the market moves, important components of the loss causation analysis, and it should be clarified when and to what extent it is appropriate to rely on them.

Given the gravity of this decision, its potential long-term implications, and the fact that the application of a loss causation analysis at the class certification is still an unsettled area of law, this Court should grant Lead Plaintiff's request for permission to appeal the District Court's order.

2. The Fifth Circuit's holding in *Oscar* marks a departure from the position taken by courts outside of the Fifth Circuit.

As many courts have recognized, *Oscar* marked a stark departure from the position taken by most courts outside the Fifth Circuit. *See, e.g., In re Nature's Sunshine Prod.'s Inc. Sec. Litig.*, 251 F.R.D. 656, 665 (D. Utah 2008) ("[T]he Fifth Circuit's decision in *Oscar* appears to be in conflict with Supreme Court and Tenth Circuit precedent which warn against determining the merits at the class certification stage."); *Lapin v. Goldman Sachs & Co.*, No. 04 Civ. 2236(RJS), 2008 WL 4222850, at *15 (S.D.N.Y. Sept. 15, 2008) ("Several courts in this District have expressly addressed the Fifth Circuit's

decision in *Oscar*, and all have rejected the notion that a showing of loss causation is a requirement at the class certification stage."); *Ross v. Abercrombie & Fitch Co.*, Nos. 2:05-cv-0819 *et al.*, 2008 WL 4059873, at *3 (S.D. Ohio Aug. 26, 2008) ("No other Court of Appeals, and no district court outside the Fifth Circuit, appears to have followed *Oscar*."); *Darquea v. Jarden Corp.*, No. 06 Civ. 722(CLB), 2008 WL 622811, at *4 (S.D.N.Y. Mar. 6, 2008) (noting that *Oscar* "is limited to the Fifth Circuit").

A number of courts have also held that *Oscar* misinterprets the Supreme Court's opinion in *Basic Inc. v. Levinson*, 485 U.S. 224 (1988). *See, e.g.*, *Lapin*, 2008 WL 4222850, at *16 ("The Court agrees with the reasoning employed by the majority of courts in this District that have considered the issue, and finds that *Oscar* should be rejected as a misreading of *Basic*."); *In re Micron Techs., Inc. Sec Litig.*, 247 F.R.D. 627, 634 (D. Idaho 2007) ("It is unlikely that [*Oscar*] would be adopted in this Circuit because it misreads *Basic*."). Insofar as the trial court properly construed *Oscar*, Lead Plaintiff respectfully suggest *Oscar* was wrongly decided, and thus the Court should grant this petition to revisit its prior decision.

B. The District Court's Certification Decision Is, As a Practical Matter, Dispositive of the Litigation.

FED. R. CIV. P. 23(f) was implemented, in part, to assist in cases such as this, where "[a]n order denying certification . . . confront[s] the plaintiff with a situation in which the only sure path to appellate

review is by proceeding to final judgment on the merits of an individual claim that, standing alone, is far smaller than the costs of litigation." FED. R. CIV. P. 23(f) Advisory Committee Notes, 1998 Amendments.

In this case, the litigation costs of proceeding to final judgment would far outweigh the value of Lead Plaintiff's individual claims against the Defendants. Under the District Court's August 8, 2007, Scheduling Order, for instance, the Plaintiff and Defendants are each entitled to take up to 50 fact depositions. Given the complex nature of this case, Lead Plaintiff anticipates using all of its allotted depositions, most of which have not been used to date, to prove its claims. In addition, Lead Plaintiff has received over 620,000 pages of documents produced in discovery by Halliburton and approximately 22 non-parties who were subpoenaed for documents. Lead Plaintiff plans to seek additional documents. Considerable resources—attorney and staff time and a sophisticated computer database—are required to comprehensively review and analyze such a large volume of data. The costs of this project alone would almost certainly far exceed value of the Lead Plaintiff's claim.

C. The District Court's Decision Is Clearly Erroneous Because the District Court Erroneously Disregarded Plaintiff's Evidence of Loss Causation.

Interlocutory Appeal should also be granted here because the District Court's decision was

clearly erroneous. The District Court erroneously disregarded much of Lead Plaintiff's evidence of loss causation. For instance, in one of its claims, Lead Plaintiff argued that the market's reaction to Halliburton's corrective disclosure on October 30, 2001—in which Halliburton announced that on October 26, 2001, a Texas jury had returned a verdict of $150 million, of which Halliburton was liable for $21.3 million—was evidence of loss causation. Reply at 23-24. Just a week before, on October 23, 2001, Halliburton had announced its third quarter 2001 results, in which it boasted that the results were "outstanding" and "record" breaking. *Id.* at 22. That same day, Halliburton's president David Lesar publicly confirmed that "there have been no adverse developments at all with respect to the Harbison-Walker situation." *Id.* at 23 (emphasis removed). This statement was not true; in fact, on September 12, 2001, a jury had returned a $130 million verdict against Halliburton. In other words, Lesar's October 23, 2001, statement "falsely suggested to the marketplace that Halliburton's prospective asbestos liabilities were under control." Order at 15.

The District Court rejected this claim in part because Halliburton had previously disclosed in its Form 10-K filings that it "recognize[d] the uncertainties of litigation and the possibility that a series of adverse court rulings could materially impact the expected resolution of asbestos related claims." *Id.* at 15 n.51. This holding is clearly erroneous. If it were correct, a company representative could continuously and flagrantly mislead investors with impunity so long as some

protective boiler-plate language is buried somewhere in a public filing.

Similarly, the Court found Lead Plaintiff had not established loss causation as to a Dec. 7, 2001, company press release detailing recent adverse asbestos verdict and making clear that the $125 million in reserves, previously represented as "adequate," "prudent," and "conservative" were grossly inadequate. Order at 17-22. That release triggered a one-day decline of 42.7% in the stock price. Reply at 24-25. As the Court has found, such a drop in the stock price can in itself demonstrate loss causation. *See Greenberg*, 364 F.3d at 669 (holding that "news that a company's earnings will be 66% below estimates satisfies the plaintiffs burden").

The District Court also erroneously disregarded Lead Plaintiff's evidence of loss causation in its evaluation of Halliburton's fraudulent accounting practices. The District Court stated that the "*only* alleged falsehood cited by Plaintiffs is in the fine print about accounting practices which had appeared in a prior financial statement, that '[a]ll known or anticipated losses on contracts are provided for currently," and therefore concluded that the alleged misrepresentation was "confirmatory." Order at 26-27. That is incorrect. Plaintiffs showed that the 1999 report released during the class period announced a significant change in accounting practice and also represented to the market, *for the first time*, that $89 million of construction revenue was "probable" of collection in its 1998 revenue, and that another $98 million of

construction revenue was "probable" of collection in its 1999 revenue. Reply at 16-17. Plaintiffs also showed that in 2000, Halliburton continued to release additional, previously undisclosed revenue numbers that were inflated with construction revenue on unapproved claims the company had supposedly deemed "probable" of collection. *Id.* at 17. The District Court simply ignored this evidence. Accordingly, the District Court's conclusion that Lead Plaintiff failed to "distinguish[] the content and effect of the new language in the 1999 Annual Report from the 'known or anticipated losses' language found in the earlier financial statements," is clearly erroneous. Order at 26.

Plaintiffs also showed that these misrepresentations in the 1999 Annual Report and 2000 financial statements were revealed in the December 21, 2000, corrective disclosure, in which Halliburton "surprised the market by disclosing that it planned to take a charge of $12 million in the fourth quarter." Reply at 18. The District Court noted that Halliburton conceded in this disclosure that $95 million of this write-off was attributable to "uncollectible cost overrun claims," including "cost overruns on seven other projects [that] had not been resolved in Halliburton's favor, as was originally anticipated." Order at 23. However, the District Court is clearly erroneous in its conclusion that "[t]here is no evidence that the market perceived a relationship between this fourth quarter charge and the new language in the 1999 Annual Report," when the corrective disclosure cut to the heart of Halliburton's earlier assurance that its cost overruns were probable of collection. *See id.* at 28. As stated

above, to establish loss causation at class certification, Plaintiffs do not have to present "evidence that Halliburton did not believe it was complying with proper accounting practices" as the District Court improperly required. *Id.*

Given these clearly erroneous holdings by the District Court, this Court should permit Lead Plaintiff to immediately appeal the District Court's order. An appeal on the merits would allow the Lead Plaintiff to address other aspects of the District Court's Order and demonstrate why it should be reversed.

CONCLUSION

For the foregoing reasons, Lead Plaintiff respectfully requests that the Court grant Lead Plaintiff's Petition for Permission to Appeal the District Court's November 4, 2008, Order Denying Lead Plaintiff's Motion to Certify Class.

Respectfully submitted,

Federal Rule of Civil Procedure 23 ..... [93a, 106a]

I. Introduction.

The District Court's denial of class certification properly applies established law to the particular facts of this case. Although the class certification decision is likely dispositive of this litigation, which began more than six years ago,[1] the Petition mischaracterizes the current state of the law, the record supporting the District Court's decision, and the decision itself. Halliburton Company and David Lesar (collectively, "Halliburton") respond to the Petition as follows.

II. The District Court Followed Established Fifth Circuit Precedent.

A. Loss Causation Is A Predicate To Class Certification In A Securities Fraud Case.

Petitioner Archdiocese of Milwaukee Supporting Fund, Inc. ("AMSF") does not contest that *Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007), requires that plaintiffs prove loss causation as a prerequisite to class certification in a securities fraud case. AMSF also concedes that the legal standard for showing loss causation has been "well established" since at least the Court's decision in *Greenberg v. Crossroads Sys., Inc.*, 364 F.3d 657, 666 (5th Cir. 2004). In the District Court, AMSF acknowledged

---

[1] *See* Fed. R. Civ. P. 23(f) 1998 advisory committee's note (noting that a request for permission to appeal is proper "when, as a practical matter, the decision on certification is likely dispositive of the litigation").

this precedent without protesting it, but nonetheless failed to satisfy the established requirements.

Oscar recognizes that class certification confers substantial advantages by. facilitating an "extraordinary aggregation of claims" and "bestows upon plaintiffs extraordinary leverage." *Oscar*, 487 F.3d at 267. To obtain the benefit of this advantage, class plaintiffs bear the burden to satisfy the requirements of Rule 23, including that common questions predominate. *Unger v. Amedisys*, 401 F.3d 316, 321 (5th Cir. 2005). In a securities fraud case, class certification depends on a presumption of reliance arising from the fraud on the market theory. Absent that theory, individual reliance issues would predominate and preclude class certification. As a result, *Oscar* requires that, before a court grants the "*in terrorrem* power of certification," class plaintiffs must prove loss causation, and the court must find by a preponderance of the evidence that the alleged misrepresentations "actually moved the market." *Oscar*, 487 F.3d at 265, 267.

B. AMSF Did Not Demonstrate Loss Causation.

The District Court did not "misread[]" or "improperly appl[y]" the law. Pet. at 1, 3. In fact, this case illustrates the rationale underlying the legal requirements in securities fraud class actions generally and this Court's decision in *Oscar* in particular. AMSF sought to certify a class of hundreds of thousands of persons who purchased

Halliburton stock during a class period that spans two-and-a-half years.[2]

Notably, in seeking class certification AMSF did not contend that any of the alleged misrepresentations caused an increase in Halliburton's stock price. In fact, AMSF's expert demonstrated that not a single alleged misrepresentation during the class period had a statistically significant impact on the stock price.[3] AMSF also did not allege that Halliburton restated its financial statements during the class period or made any other corrections that revealed falsity in a specific prior misstatement. Instead, AMSF's Complaint is premised on a patchwork of company announcements of various information that, according to AMSF's expert, the market perceived negatively. AMSF groups these statements—which it characterizes as corrective disclosures—into three broad and unrelated topics: (1) Halliburton's potential liability in asbestos litigation; (2) its accounting for construction-contract claims that were in the process of being negotiated with customers; and (3) the success of its acquisition of Dresser Industries, Inc. See Pet. at 2.

Although Halliburton's stock price dropped following the announcements identified by AMSF, that fact alone cannot justify a presumption of

---

[2] The class period begins June 3, 1999, when Halliburton's stock price was near its 52 week high, and ends December 7, 2001, when the stock hit an over seven-year low, and just before it began a six-month rally.

[3] AMSF's App. to Mot. for Class Cert. 18-22 (Nettesheim Report 40-45) (Dist. Ct. Docket No. 341).

reliance. To rule otherwise would "transform a private securities action into a partial downside insurance policy." *Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336, 347-48 (2005). Accordingly, Oscar requires AMSF to demonstrate that "the misstatement actually moved the market." *Oscar*, 487 F.3d at 265.

Where, as here, the plaintiffs rely on a price drop rather than price inflation, they must first demonstrate that "the negative 'truthful' information causing the decrease in price is related to an allegedly false, non-confirmatory positive statement made earlier." *Id.* at 266 (quoting *Greenberg*, 364 F.3d at 666). Plaintiffs must also show "that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline." *Id.* (emphasis added).

Following *Oscar* and *Greenberg*, the District Court analyzed in detail each of the statements that AMSF contends were corrective disclosures to determine (i) whether they were related to previous, actionable and non-confirmatory statements during the class period, and, if so, (ii) whether the evidence linked the stock price decline to the corrective disclosure rather than other negative information simultaneously released. With respect to each alleged corrective disclosure, the District Court correctly found AMSF's proof wanting for one or more of four different reasons.

First, the District Court found that AMSF had failed to relate alleged corrective disclosures to

alleged misrepresentations.[4] With respect to the asbestos issue, for example, the District Court found that "Plaintiffs do not actually link any alleged misrepresentations with the four [subsequent] asbestos disclosures." Op. at 7-8. The District Court reiterated that:

> Plaintiffs do not identify specific statements that were revealed to be fraudulent by these corrective disclosures. Importantly, it is the misrepresentations themselves, not the corrective disclosures, which form the basis of a valid securities fraud claim. . . . Unless actionable statements, which were later corrected, are identified, Plaintiffs cannot establish loss causation. Op. at 8.

Similarly, with respect to allegations relating to accounting practices for construction contracts, the District Court found that AMSF had failed to "identify any specific misrepresentations that correlate to" the alleged corrective disclosure. Op. at 7-8. For this reason, among others, AMSF failed to prove loss causation:

> While *Nathenson* held that a plaintiff may rely on a decline in the stock price following a corrective disclosure to establish loss causation, *Greenberg* clarified that a plaintiff must still show the existence of earlier misrepresentations that actually moved the market. Thus, when relying on a decline in

---

[4] AMSF concedes that it was required to allege positive, false statements and "connect them to the corrective disclosure." Pet. at 7.

> stock price, Plaintiffs must still relate the disclosure causing the fall to an earlier misrepresentation that was corrected by the disclosure. Op. at 23-24 (footnote omitted).

Second, the District Court also found that, even assuming a sufficient relationship between the alleged misrepresentations and the alleged corrective disclosures, many of the alleged misrepresentations "were confirmatory, and thus not actionable."[5] For example, class period statements that Halliburton's nerger with Dresser would achieve an estimated $500 million in cost savings were repetitive of prior statements and therefore not actionable. Op. at 30. "[C]onfirmatory information has already been digested by the market and will not cause a change in stock price." *Greenberg*, 364 F.3d at 665-66. "Because the presumption of reliance is based upon actual movement of the stock price, confirmatory information cannot be the basis for a fraud-on-the-market claim."[6] *Id.* at 666.

Third, the District Court found the vast majority of the alleged disclosures were not corrective; they did not "reveal that Halliburton made an initial false statement" or "reveal to the

---

[5] See Op. at 20, 23-24, 30, 32-33, 36-37.

[6] The District Court also noted that AMSF "commingled evidence of inflation of the stock price during the class period with impermissible evidence of inflation of the stock price prior to the class period." Op. at 24. In other words, in its attempt to link corrective disclosures with misrepresentations, AMSF failed to distinguish between alleged misstatements during the class period and alleged pre-class period statements, which could not be actionable, because, among other reasons, they were time barred.

marketplace the truth of the alleged misrepresentation." Op. at 10, 14. With respect to these disclosures, the District Court observed that, "Plaintiffs ignore the distinction between negative and corrective disclosures." Op. at 16.[7] *See Greenberg*, 364 F.3d at 666 (positive and negative statements are related when the latter "specifically revealed" the truth).

Fourth, with respect to alleged disclosures that included multiple pieces of negative news, the District Court found that AMSF failed to show that the market reacted to the alleged corrective information as opposed to the new, negative information unrelated to previous alleged misstatements. Op. at 20, 33-34.

---

[7] AMSF points to an August 9, 2001 statement in which Halliburton announced that it was increasing reserves for asbestos liabilities. Pet. at 7-8. AMSF presents the adjustment as an increase "to $124 million– over twice the $60 million that only two weeks prior, the Company had assured investors would be adequate." Pet. at 8. That is a mischaracterization of the record. Halliburton had not stated two weeks earlier that $60 million was an adequate amount for *total* reserves. Rather, Halliburton had estimated that it would increase its then-existing reserves by $60 million (in *after-tax* dollars) due to additional claims against a former subsidiary that had asked Halliburton for financial assistance. AMSF's Fourth Consolidated Compl. ¶ 175 (Dist. Ct. Docket No. 246); *see also* Halliburton's App. to Resp. to Mot. for Class Cert at 117 (June 28, 2001 Press Release) (Dist. Ct. Docket No. 346). Consistent with the earlier estimate, the August 9 disclosure referenced total reserves for both Halliburton and the former subsidiary of $124 million (in *pre-tax* dollars). Halliburton's App. to Resp. to Mot. for Class Cert at 103 (Halliburton June 2001 10-Q) (Dist. Ct. Docket No. 346). The August disclosure does not indicate that the previous estimate was false, (which it was not), and the later disclosure is therefore not corrective.

Expressly applying Oscar and Greenberg to the record in this case, the District Court found that "Plaintiffs have not demonstrated loss causation as to any of their claims." Op. at 1. The District Court's reasoning is neither "novel" nor "clearly erroneous." Pet. at 1, 3, 6. If the Court permits AMSF to appeal, full briefing will confirm that each of the District Court's findings comports with the evidentiary record.

C. The District Court Did Not Impose Improper Burdens On AMSF.

Selectively quoting excerpts of the Opinion out of context, AMSF erroneously contends that the District Court "misinterpret[ed] *Oscar*." Pet. at 6. Contrary to AMSF's contention, the District Court held neither (1) "that a plaintiff in a securities class action must prove the fraudulent intent behind a defendant's statements at the class certification stage" nor (2) that plaintiffs must prove that corrective disclosures make a "confession" of fraud. Pet. at 6, 10. Reading the Opinion, which never requires proof of "intent," "scienter," or a "confession," disproves these contentions. The District Court's comments from the bench during the class-certification hearing also belie AMSF's position. *See, e.g.*, March 21, 2008 Tr. at 48-49, 90-91 ("I think the issue of lights flashing, we committed fraud, is gone. I don't think [Halliburton is] contending that, and I don't think that's the law either.").

Read in context, the excerpts AMSF cites refer to the requirement to relate alleged corrective

disclosures to alleged non-confirmatory misrepresentations in order to distinguish between merely negative information and information that corrects a prior false statement by revealing the truth. In line with Fifth Circuit precedent, the District Court repeatedly explained that loss causation requires a showing that the stock price dropped because of the "'revelation of the truth and not the release of [] unrelated negative information.'" Op. at 5 (quoting *Greenberg*, 364 F.3d at 665), 12, 20.[8]

The District Court also did not err by referencing the thorough analysis in *Ryan v. Flowserve Corp.*, 245 F.R.D. 560 (N.D. Tex. 2007), a case AMSF cited frequently in its class certification motion as stating the applicable standards. Although AMSF now dismisses *Flowserve* as having been decided at "the summary judgment . . . stage," Pet. at 8, in fact the court in that case first denied a

---

[8] AMSF made no attempt to link any potentially actionable statement to any alleged "corrective" disclosure revealing the falsity of the prior statement. *See, e.g.*, Op. at 7-8 ("Plaintiffs do not actually link any alleged misrepresentations with the four asbestos disclosures"); 23 ("Nettesheim simply did not identify any specific misrepresentations that correlate to the December 21, 2000 disclosure"); 32 ("Plaintiffs argue that the analysts' downgrading of Halliburton stock amounts to a new corrective disclosure without identifying any actionable misrepresentation"). AMSF failed to supply the necessary link, and the District Court found no evidence of a nexus between the alleged disclosures and prior fraud. *See, e.g.*, Op. at 16 ("The market did not perceive the revelation of the verdict as evidence of prior fraud."); 21 ("Plaintiffs do not cite any analyst reports or other information indicating that the market perceived the December 7, 2001 disclosure as revealing fraud, rather than just delivering bad news.").

class certification motion, finding the absence of loss causation by a preponderance of the evidence. Flowserve, 245 F.R.D. at 570. The court then separately resolved a summary judgment motion against the individual plaintiffs. *Id.* at 577-82.

Nor did the District Court "require plaintiffs to meet summary judgment burdens of proof." Pet. at 5. The District Court correctly stated and applied the preponderance-of-the-evidence standard established in *Oscar*. *Oscar*, 487 F.3d at 269.

The District Court also correctly noted that its ruling could be made by "drawing largely from publicly available data thereby leaving minimal need for discovery." Op. at 3 (footnote omitted). This accords with *Oscar*:

> Little discovery from defendants is demanded by the fraud-on-the-market regimen. Its "proof' is drawn from public data and public filings, as in this case.

Oscar, 487 F.3d at 267. AMSF's repeated complaint that it did not have the benefits of discovery prior to filing its class certification motion is therefore legally irrelevant. It is also factually incorrect.[9] As

---

[9] This class action lawsuit was commenced in the Northern District of Texas on June 3, 2002. In 2004, the parties moved for approval of a settlement, which the District Court denied after several proposed class members, including AMSF, objected. AMSF became the lead plaintiff in the case on May 3, 2005, and moved for class certification on September 17, 2007. Halliburton produced hundreds of thousands of documents to the plaintiffs in 2006. In the summer 2007, AMSF served requests for document production, in response to

in *Flowserve*, the class certification motion here was decided on "volumes of papers." *Flowserve*, 245 F.R.D. at 567. The appendices submitted in support of the motion and in response total well over 1000 pages. AMSF never asked for additional discovery to make the requisite loss-causation showing.

The District Court did not impose improper burdens on AMSF. Instead, properly applying governing law, the District Court correctly held that AMSF failed to establish loss causation.

III. District Courts Are Not Confused Or Conflicted Regarding Loss Causation Proof.

Far from demonstrating "confusion among the trial courts," or "inconsistent decisions," Pet. at 5, a review of district court opinions applying *Oscar* shows harmony as to the applicable legal principles. As in this case, both *Flowserve* and *In re Seitel, Inc. Sec. Litig.*, 245 F.R.D. 263 (S.D. Tex. 2007), found that Oscar precluded class certification because the evidence failed to demonstrate that the alleged misrepresentations caused any actual movement in the stock price. *Flowserve*, 245 F.R.D. at 569; *Seitel*, 245 F.R.D. at 278.

---

which Halliburton offered for inspection hundreds of thousands of additional documents. AMSF admits receiving more than 600,000 pages of documents from Halliburton and more than 20 non-parties. Pet. at 13. After the class certification motion was filed, both sides conducted discovery connected to the motion, including depositions of expert witnesses.

In the only other district court case AMSF cites for its argument, *In re OCA Inc. Sec. and Derivative Litig.*, Civil Action No. 05-2165, 2008 WL 4681369 (E.D. La. Oct. 17, 2008), the court granted a joint motion to approve a class for settlement purposes. In that case, the company had announced that it had restated its financial statements due to the discovery of material errors. The stock price fell 38%, the company was delisted, and a bankruptcy petition was filed. There was no dispute that the announcement was a corrective disclosure, and the evidence showed that no other negative information could have caused the stock price decline. By contrast, in this case, Halliburton did not restate its financial statements, and the District Court properly held that the disclosures were not corrective.

There is also no confusion among the district courts as to the form of proof that may show loss causation. The *Oscar* decision gives appropriate guidance on this issue, particularly where the plaintiff relies on a stock price drop following the announcement of multiple negative items, only some of which are alleged to be corrective. In those circumstances, "analyst speculation about materiality . . . without more" is insufficient to support a loss causation finding.[10] *Oscar*, 487 F.3d

---

[10] There is no conflict among district courts regarding the weight to be afforded analyst opinions. In this case, AMSF argued that two analysts downgraded their earnings estimates for Halliburton on January 5, 2000, and that these analysts' reports represented a corrective disclosure following which the stock price declined. The District Court found that these reports were not related to any alleged actionable misrepresentation. Op. at 31. In addition, the District Court

at 271. The Court further recognized that an "event study" or other "empirically- based showing" may be sufficient, but only if it links the stock price movement to the "culpable disclosure," as opposed to "an entire bundle of negative information." *Id.*

Like the plaintiff in *Oscar*, AMSF proffered the testimony of an expert who purportedly conducted an event study. Among other things, AMSF's expert failed to relate the alleged corrective disclosures to actionable misrepresentations. In fact, the expert admitted that she did not "match[] particular prior statements to disclosures."[11] Additionally, AMSF's expert did not isolate any negative effect flowing from the revelation of the

---

found that nothing in the analysts' reports or AMSF's expert's reports provided empirical evidence that the market perceived a correction of a prior misstatement. The District Court observed that AMSF's reliance on the analyst reports was even weaker than the *Oscar* plaintiffs' reliance because the analyst reports in *Oscar* "at least provided concrete examples of disclosures that could potentially be perceived as corrective." Op. at 33.

The court in *Fener v. Belo Corp.*, 560 F. Supp.2d 502 (N.D. Tex. 2008), denied class certification after finding that the single announcement on which the plaintiffs' claim rested consisted of three pieces of information, only one of which related to the alleged misrepresentation. Plaintiffs had made no attempt to address any of the three news items individually, the expert's event study failed to target the corrective disclosure, and plaintiffs therefore failed to show that the stock decline was attributable to the corrective information. In discussing the evidence, the court noted *Oscar*'s distinction between analyst commentary and empirical evidence. *Id.* at 507-08.

[11] Halliburton's App. to Resp. to Mot. for Class Cert. at 50 (Nettesheim Dep. 121) (Dist. Ct. Docket No. 346).

alleged corrective disclosures, as opposed to new and unrelated negative information that was announced simultaneously. *See, e.g.*, Op. at 17, 20-21.

IV. Conclusion.

Halliburton responds to the Petition because it disagrees that the District Court misinterpreted or misapplied *Oscar*. The District Court recognized the "high burden" on plaintiffs at the class-certification stage due to "'the extraordinary leverage bestowed upon plaintiffs with certification' and carefully applied the loss causation standard. Op. at 3-4 (citing *Oscar*, 487 F.3d at 266-67). Halliburton does not dispute, however, that the District Court's decision is, "as a practical matter . . . likely dispositive of the litigation." Fed. R. Civ. P. 23 (f) 1998 advisory committee's note. For that sole reason, AMSF's Petition is proper and, if granted, provides a procedural basis for affirming the District Court's sound ruling on immediate appeal.

THE ARCHDIOCESE OF MILWAUKEE SUPPORTING FUND, INC, On Behalf of Itself and All Others Similarly Situated,

Plaintiff-Appellant

v.

HALLIBURTON CO; DAVID J. LESAR,

Defendants-Appellees

Appeal from the United States District Court
For the Northern District of Texas

Before REAVLEY, CLEMENT, and SOUTH WICK, Circuit Judges.

REAVLEY, Circuit Judge:

The Archdiocese of Milwaukee Supporting Fund, Inc. filed this putative securities fraud class action as lead plaintiff against Halliburton Company and David Lesar, the Chief Operating Officer and

then CEO during the class period, alleging violations of sections 10(b) and 2 0(a) of the Securities Exchange Act of 1934 and Securities Exchange Commission Rule 10(b)-5. The district court denied the Plaintiff's motion for class certification under FED R. CIV. P. 23, and Plaintiff appeals that order. Finding no abuse of discretion by the district court, we AFFIRM the denial of class certification.

I.

This is a private securities fraud-on-the-market case. Under the fraud-on-the-market theory, it is assumed that in an efficient, well-developed market all public information about a company is known to the market and is reflected in the stock price. When a company has publicly made material misrepresentations about its business, we may presume that a person who buys the company's stock has relied on the false information. The stockholder then suffers losses if the falsity becomes known and the stock price declines. *See Basic Inc. v. Levinson.*[1] It is the response of the market to the correction that proves the effect of the false information and measures the plaintiff stockholder's loss.

Plaintiff here claims that Halliburton made false statements about three areas of its business: (1) Halliburton's potential liability in asbestos litigation, (2) Halliburton's accounting of revenue in its engineering and construction business, and (3) the benefits to Halliburton of a merger with Dresser

---

[1] 485 U.S. 224, 246–47, 108 S. Ct. 978, 991–92 (1988).

Industries. It contends that investors lost money when Halliburton issued subsequent disclosures correcting the false statements and the market declined following the negative news. In order to obtain class certification on its claims, Plaintiff was required to prove loss causation, i.e., that the corrected truth of the former falsehoods actually caused the stock price to fall and resulted in the losses.[2]

The district court denied class certification because it found that Plaintiff failed to prove this causal relationship. We review the district court's certification decision for an abuse of discretion, but we review de novo the legal standards employed by the district court. *Fener v. Operating Eng'rs Constr. Indus. & Miscellaneous Pension Fund (Local 66)*.[3] Plaintiff contends that the district court applied an erroneous standard for loss causation and required it to prove more than is required under law. Our review of the district court's order and the evidence leads us to conclude, however, that the district court

---

[2] Plaintiff contends that our precedent, specifically the requirement of *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261, 269 (5th Cir. 2007), that class plaintiffs prove loss causation at the class certification stage, is contrary to Supreme Court and sister circuit precedent. Plaintiff may not assail *Oscar* as wrongly decided, as we are bound by the panel decision. *See Soc'y of Separationists, Inc. v. Herman*, 939 F.2d 1207, 1211 (5th Cir. 1991) ("In this circuit, one panel may not overrule the decision, right or wrong, of a prior panel in the absence of an intervening contrary or superseding decision by the court en banc or the Supreme Court.").

[3] 579 F.3d 401, 406 (5th Cir. 2009).

fully understood loss causation under our precedent and correctly applied the legal standard. As we explain, the district court's decision was well supported and was not an abuse of discretion.

II.

Before discussing the Plaintiff's specific allegations against Halliburton, we first set forth the appropriate framework for a private securities fraud case and consider the district court's application of that framework. A securities fraud claim under § 10(b) of the Securities Exchange Act and Rule 10b-5 requires a plaintiff to show (1) a material misrepresentation (or omission); (2) scienter; (3) a connection with the purchase or sale of a security; (4) reliance; (5) economic loss; and (6) loss causation. *Dura Pharms., Inc. v. Broudo*.[4] In the case of a putative class, a plaintiff may create a rebuttable presumption of reliance under the fraud-on-the-market theory by showing "that (1) the defendant made public material misrepresentations, (2) the defendant's shares were traded in an efficient market, and (3) the plaintiffs traded shares between the time the misrepresentations were made and the time the truth was revealed." *Greenberg v. Crossroads Sys., Inc.*[5] A defendant may rebut the presumption "by '[a]ny showing that severs the link between the alleged misrepresentation and either

---

[4] 544 U.S. 336, 341-42, 125 S. Ct. 1627, 1631 (2005).

[5] 364 F.3d 657, 661 (5th Cir. 2004)

the price received (or paid) by the plaintiff, or his decision to trade at fair market price [.]'"[6]

Here, the parties contest only the alleged misrepresentations and do not dispute the efficiency of the market or Plaintiff's trading activity. In order to take advantage of the fraud-on-the-market presumption of reliance, Plaintiff must prove that the complained-of misrepresentation or omission "materially affected the market price of the security." *Alaska Elec. Pension Fund v. Flowserve Corp.*[7] In other words, Plaintiff must show that an alleged misstatement "actually moved the market."[8] Thus, "we require plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption."[9] And we require this showing "at the class certification stage by a preponderance of all admissible evidence."[10]

---

[6] *Id.* at 66 1–62 (quoting *Basic*, 485 U.S. at 248, 108 S. Ct. at 992).

[7] 572 F.3d 221, 228 (5th Cir. 2009) (quotation and citation omitted).

[8] *Oscar*, 487 F.3d at 265.

[9] *Id.*

[10] *Id.* at 269. Although Plaintiff *must* establish loss causation at the certification stage, the court *may* examine the issue at a variety of stages during the course of the litigation. *See Fener*, 579 F.3d at 407 ("A court can examine loss causation at the pleadings stage, the class certification stage, on summary judgment, or at trial.") (footnotes omitted).

The district court explicitly recognized the need for Plaintiff to establish a causal link between the alleged falsehoods and its losses in order to invoke the fraud-on-the market presumption. *See Nathenson v. Zonagen, Inc.*[11] The court also correctly recognized that the causal connection between an allegedly false statement and the price of a stock may be proved either by an increase in stock price immediately following the release of positive information, or by showing negative movement in the stock price after release of the alleged "truth" of the earlier falsehood.[12] Plaintiff here relies only on stock price decreases following allegedly corrective disclosures by Halliburton.

That being the case, the district court correctly noted that Plaintiff has an added burden because it is not enough merely to show that the market declined after a statement reporting negative news.[13] We must bear in mind that the main concern when addressing the fraud-on-the-market presumption of reliance is whether allegedly false statements actually inflated the company's stock price.[14] By relying on a decline in price following a

---

[11] 267 F.3d 400, 413 (5th Cir. 2001) (Loss causation is "a direct causal link between the misstatement and the claimant's economic loss.") (internal quotation marks and citation omitted).

[12] *See Greenberg*, 364 F.3d at 665.

[13] *See id.* (holding that plaintiffs must do more than "simply offer[] evidence of any decrease in price following the release of negative information").

[14] *Id.*

corrective disclosure as proof of causation, a plaintiff need prove that its loss resulted directly *because* of the correction to a prior misleading statement; otherwise there would be no inference raised that the original, allegedly false statement caused an inflation in the price to begin with.[15] In other words, the decline in price following a corrective disclosure must raise an inference that the price was actually affected by earlier alleged misrepresentations.[16] We therefore require plaintiffs to show that a loss occurred from the decline in stock price because the truth "'ma[de] its way into the marketplace,'" rather than for some other reason, such as "a result of 'changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions,' or other factors independent of the fraud."[17] Similarly, if a company releases multiple items of negative information on the same day, the plaintiff must establish a reasonable likelihood that a subsequent decline in stock price is due to the revelation of the truth of the earlier misstatement rather than to the release of the unrelated negative

---

[15] *Id.*

[16] *See Nathenson*, 267 F.3d at 415 (stating that "where the facts properly considered by the district court reflect that the information in question did not affect the price of the stock then the district court may properly deny fraud-on-the-market based recovery").

[17] *Flowserve*, 572 F.3d at 229 (quoting *Dura*, 544 U.S. at 342–43, 125 S. Ct. at 1627).

information.[18] In this way, the plaintiff must satisfy the court that its loss likely resulted from the specific correction of the fraud and not because of some independent reason. A subsequent disclosure that does not correct and reveal the truth of the previously misleading statement is insufficient to establish loss causation.[19]

Causation therefore requires the Plaintiff to demonstrate the joinder between an earlier false or deceptive statement, for which the defendant was responsible, and a subsequent corrective disclosure that reveals the truth of the matter, and that the subsequent loss could not otherwise be explained by some additional factors revealed then to the market.[20] This requirement that the corrective disclosure reveal something about the deceptive nature of the original false statement is consistent with liability in a securities fraud action, where it is those who affirmatively misrepresent a material fact

---

[18] *Greenberg*, 364 F.3d at 665.

[19] *See Flowserve*, 572 F. 3d at 230 (holding that "to establish loss causation this disclosed information must reflect part of the 'relevant truth'–the truth obscured by the fraudulent statements").

[20] *See Greenberg*, 364 F.3d at 662 (noting that loss causation may be proved from a "decrease in price following the revelation of the misleading nature of these [prior] statements") (discussing *Nathenson*, 267 F.3d at 414); id. at 665 ("To raise an inference through a decline in stock price that an earlier false, positive statement actually affected a stock's price, the plaintiffs must show that the false statement causing the increase was related to the statement causing the decrease.").

affecting the stock price that are held responsible for losses.[21]

It is also necessary "that the earlier positive misrepresentation not be confirmatory."[22] Confirmatory information is already known to the market and, having been previously digested by the market, will not affect the stock price.[23]

After surveying our precedent, the district court correctly summed up Plaintiff's burden in this case by stating that because Plaintiff presented no evidence that a false, non-confirmatory positive statement caused a positive effect on the stock price, Plaintiff would have to show "(1) that an alleged corrective disclosure causing the decrease in price is *related* to the false, non-confirmatory positive statement made earlier, and (2) that it is *more probable than not* that it was this related corrective disclosure, and not any other unrelated negative

statement, that caused the stock price decline."[24] This was the correct standard.[25]

III.

Plaintiff argues that the district court misapplied our precedent, however, because it incorrectly required Plaintiff to prove actual fraud at the class certification stage. Plaintiff asserts that this requirement runs afoul of our recent decision in *Flowserve*.[26] We do not agree with the Plaintiff's reading of *Flowserve* or its characterization of the district court's opinion.

In *Flowserve*, certain alleged misstatements by the defendant concerned projected earnings guidance released in October 2001 for the company's

---

[24] *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, No. 3:02-CV-1152, 2008 WL 4791492, at *3 (N.D. Tex. Nov. 4, 2008) (emphasis in original) (internal quotation marks and citation omitted).

[25] The district court's statement of the Plaintiff's burden was nearly identical to the standard we announced in *Greenberg*. *See Greenberg*, 364 F.3d at 666 (stating that plaintiffs must prove "(1) that the negative 'truthful' information causing the decrease in price is related to an allegedly false, non-confirmatory positive statement made earlier and (2) that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline").

[26] *See Flowserve*, 572 F.3d at 230 (rejecting as incorrect defendant's theory that "a fraud causes a loss only if the loss follows a corrective statement that specifically reveals the fraud").

fiscal year 2002. The subsequent alleged corrective disclosures were downward revisions to the earnings guidance released in July and September 2002. The defendant argued that the standard for loss causation required plaintiffs to show a "fact-for-fact" disclosure that fully corrected prior misstatements, which had not occurred in either of the alleged corrective disclosures.[27] We rejected that approach, but we also insisted that plaintiffs need to show more than that a subsequent disclosure reveals the defendant's true financial condition.[28] We held that the disclosure "must reflect part of the 'relevant truth'–the truth obscured by the fraudulent statements."[29] The *Flowserve* court found erroneous the district court's belief that the defendant's revised earnings guidance in July and September 2002 was not relevant to any prior alleged misrepresentations, and we therefore reversed the district court's denial of class certification.[30]

But *Flowserve* did not eliminate the requirement at class certification that plaintiffs must prove the corrective disclosure shows the misleading or deceptive nature of the prior positive statements.[31] We have previously explained that the

---

[27] *Id.* at 229.

[28] *Id.* at 230.

[29] *Id.*

[30] *Id.* at 231.

[31] *See Greenberg*, 364 F.3d at 662.

"relevant truth" necessary in an alleged corrective disclosure is such that "the truth disclosed must simply make the existence of the actionable fraud more probable than it would be without that alleged fact (taken as true)." *Lormand v. US Unwired, Inc.*[32] When confronted with allegedly false financial predictions and estimates, the district court must decide whether the corrective disclosure more probably than not shows that the original estimates or predictions were designed to defraud. As we held in *Flowserve*, "[i]f [Plaintiff] cannot prove by a preponderance of the evidence that the market learned more than that [Defendant's] earnings guidance was lower and so its business seemed less valuable, it cannot establish that its loss was caused by [Defendant's] misstatements . . . ."[33] Thus, the truth revealed by the corrective disclosure must show that the defendant more likely than not misled or deceived the market with earnings misstatements that inflated the stock price and are actionable. Otherwise, the misstatements would do little more than "touch upon" the alleged loss rather than cause the loss.[34]

We are satisfied that the district court here understood the need for the corrective disclosures to

---

[32] 565 F.3d 228, 256 n.20 (5th Cir. 2009).

[33] *Flowserve*, 572 F.3d at 232.

[34] *See Dura*, 544 U.S. at 343, 125 S. Ct. at 1632 (holding that it is insufficient for a misrepresentation to merely "touch upon" a later economic loss because "[t] o 'touch upon' a loss is not to cause a loss").

reveal the actionable truth about prior misstatements.[35] The district court correctly stated that "[i]mportantly, it is the misrepresentations themselves, not the corrective disclosures, which form the basis of a valid securities fraud claim. . . . Unless actionable statements, which were later corrected, are identified, Plaintiffs cannot establish loss causation."[36] The court went on to conclude that Plaintiff largely failed to identify disclosures that had a *corrective* effect linked to a specific misrepresentation, as opposed to simply a *negative* effect, and that many of the alleged corrective disclosures constituted confirmatory information. We therefore conclude that the district court did not apply an incorrect legal standard, and we turn to the specific statements and corrective disclosures alleged in Plaintiff's complaint.

IV.

Plaintiff contends that it has identified specific misrepresentations by Halliburton and linked those misrepresentations to partial corrective disclosures. It asserts that the allegations of its

---

[35] Plaintiff challenges statements in the district court's decision that Plaintiff had not identified a disclosure specifically revealing fraud. We recognize that a plaintiff need not prove at the class certification stage intentional fraud by the defendant. *See Flowserve*, 572 F.3d at 230. But reading the entirety of the Flowserve opinion, we conclude that a plaintiff still must prove that the defendant is responsible for the error of the misrepresentation. We read the district court's decision to say no more.

[36] *Archdiocese of Milwaukee Supporting Fund*, 2008 WL 4791492, at *5.

complaint together with the report of its expert, Jane Nettesheim, demonstrated that those disclosures are related to the misrepresentations and proximately caused its losses. Upon examining the alleged corrective disclosures and the evidence, we remain unpersuaded.

Plaintiff relies on three general categories of alleged misstatements by Halliburton made during a class period of June 3, 1999, to December 7, 2001. The first category of statements concerns Halliburton's exposure to liability in asbestos litigation and the company's stated reserves for such litigation. The allegedly corrective statements were made in press releases and SEC filings on June 28, 2001, August 9, 2001, October 30, 2001, and December 4–7, 2001.

Halliburton's asbestos liability derived from its 1998 merger with Dresser Industries and from a former subsidiary of Dresser known as Harbison-Walker Refractories Company. As of May 2001, Halliburton reported that its reserves were approximately $30 million to cover asbestos-related liability. On June 28, 2001, Halliburton reported in a press release that Harbison-Walker had asked Halliburton to provide financial assistance for asbestos claims that Harbison- Walker had previously agreed to assume when it spun off from Dresser in 1992. The release reported that this was a new development, as Harbison-Walker had previously reaffirmed its responsibility for those claims. Halliburton reported in the press release that in response it would need to increase its asbestos reserves by $50 million to $60 million, after

tax. On August 9, 2001, Halliburton filed a Form 10-Q with the SEC reporting that its asbestos reserves were $124 million. On October 30, 2001, Halliburton announced in a press release that a Mississippi jury had returned a plaintiff's verdict in an asbestos suit on October 26, 2001, for which Halliburton was responsible for $21.3 million. Then on December 4 and 7, 2001, Halliburton reported in a SEC filing and press release additional judgments against Dresser in other asbestos cases. Halliburton's stock price declined following each of these statements. Plaintiff contends that the filings and press releases related directly to and corrected Halliburton's previous misrepresentations that its asbestos reserves were adequate. We find no merit to this contention.

The June 28, 2001, press release does not correct any specific misrepresentation by revealing a previously obscured truth.[37] Nowhere in the release is there any mention of prior asbestos reserve estimates, and Plaintiff makes no argument that Halliburton made prior statements about exposure from claims related to Harbison-Walker.[38] At most,

---

[37] *See Flowserve*, 572 F.3d at 230.

[38] *See Greenberg*, 364 F.3d at 667 (holding that an allegedly corrective disclosure was not related to prior allegedly false reports on the speed of new routers where the disclosure "makes no reference to increased router speed"); id. at 668 (holding that an alleged corrective disclosure reporting problems with third quarter earnings was not related to prior statements about first or second quarter earnings where the disclosure made "no reference at all" to the first and second quarters).

the release relates to prior estimates that asbestos reserve levels were adequate generally, but it does not correct a specific prior alleged misstatement.[39] Just as merely lowering earnings estimates does not reveal that a defendant previously misrepresented those estimates, merely raising the asbestos reserves does not show that those prior reserve estimates were intentionally misleading—the market must learn more than that Halliburton's business was potentially less valuable because of erroneous estimates of asbestos liability.[40] We agree with the district court that the situation could be different if Plaintiff had alleged that Halliburton previously stated it was including Harbison-Walker claims in its asbestos reserve estimates but actually did not do so, or if Halliburton had previously stated it had no exposure from Harbison-Walker claims and that it would not cover them, when in fact that was not true. Instead, Plaintiff asks us to draw an inference that the June 28, 2001 press release corrected prior allegedly false estimates of asbestos reserves merely because those reserves changed. But a company is allowed to be proven wrong in its estimates, and we can discern no indication from the June 28, 2001 press release that Halliburton's prior asbestos

---

[39] *See, e.g., Nathenson*, 267 F.3d at 419 (rejecting as inadequate plaintiff's allegations that "suffer[ed] from a lack of required specificity . . . in pin-pointing the particular misleading statement (other than general statements that the Phase III results were 'positive')").

[40] *See Flowserve*, 572 F.3d at 232.

reserve estimates were misleading or deceptive.[41] It follows that the June 28, 2001 press release was not an actionable corrective disclosure.

The same is true for the August 9, October 30, and December 4–7, 2001 SEC filings and press releases. Although Halliburton reported a much larger reserve for the asbestos litigation on August 9, this information was actually confirmatory because Halliburton had previously reported that it would need to increase its reserves by an additional amount of approximately $60 million, *after tax*. The August 9, 2001 Form 10-Q reported, consistent with Halliburton's prior statements, that the company "recorded as discontinued operations . . . an accrual of $92 million ($60 million, after tax)."

The announcements of various jury verdicts were also not actionable corrections. As noted by the district court, Halliburton actually repeated in a series of public filings the warning about "the uncertainties of litigation and the possibility that a series of adverse court rulings could materially impact the expected resolution of asbestos claims." We are not moved by Plaintiff's suggestion that these warnings, which appeared in at least five of Halliburton's 10-K and 10-Q filings, constituted

---

[41] *See id.* at 232 ("Flowserve was free to be wrong in its October 2001 earnings guidance and even for such error to cause investors loss when it was revealed in July and September 2002–so long as Flowserve did not commit fraud. Only if Flowserve's October 2001 guidance (or another alleged misstatement) was fraudulent would any loss it caused Alaska be actionable.").

mere boilerplate disclaimers of the risks associated with litigation.[42]

Neither the announcement of the Mississippi verdict nor the verdicts in other states demonstrated that Halliburton's previous estimates of asbestos liability obscured the relevant truth about the asbestos estimates.[43] While Plaintiff cites news reports about the asbestos verdicts and has shown that Halliburton's stock price reacted to the negative news, a decline in price following negative news does not prove loss causation.[44] We see in the evidence concerning the asbestos litigation a pattern of Halliburton keeping the market abreast of asbestos developments as they occurred and its necessary

---

[42] *See Rubinstein v. Collins*, 20 F.3d 160, 167–68 (5th Cir. 1994) (while not dispositive per se, cautionary language is relevant to materiality of predictive statements as basis for securities fraud claim).

[43] Plaintiff contends that the disclosure of the Mississippi verdict exposed the falsity of estimates of asbestos liability in part because one analyst wrote that "[t]his jury award sets new precedents; the size of the award is enormous." However, rather than show that Halliburton's previous statements obscured the truth about asbestos exposure, this analyst's statement appears to confirm the unexpected nature of a precedent-setting jury verdict. The district court noted that another analyst, cited in the report of Plaintiff's expert, also supported the perception by the market that the verdict was a surprise rather than a revelation of a falsehood. That analyst stated, "[w]e expect a vigorous defense by [Halliburton] and remain optimistic that the asbestos liability will remain under control."

[44] *See Greenberg*, 364 F.3d at 665.

adjustments to the litigation reserves. We think this undermines any conclusion that the asbestos-related statements corrected prior misrepresentations or that the company acted with deception.

V.

We reach a similar conclusion with respect to the second and third group of alleged public misrepresentations by Halliburton. These alleged misrepresentations concern the benefits to Halliburton of its merger with Dresser Industries, and the company's accounting of revenue from cost-overruns on fixed-price construction and engineering contracts (so-called unapproved claims). The alleged corrective disclosures occurred on October 4, 1999, January 5, 2000, October 24, 2000, and December 21, 2000.

Halliburton announced on October 4, 1999, that it was selling its interest in two Dresser joint ventures and that it expected its third quarter earnings to be less than previously expected, due in part to lower than expected profits from joint ventures and other business units of the Dresser group. On January 5, 2000, two analysts reduced their earnings estimates for Halliburton after discussions with company executives. According to Plaintiff, the October announcement and the analyst reports exposed the inaccuracy of Halliburton's previous positive statements about merging with Dresser, particularly statements in July and September 1999 that Halliburton expected annualized cost savings of $500 million from the merger.

Even if it were possible to say that the prior statements were more than erroneous expectations, both the October 4, 1999 announcement and the analyst reports contained multiple pieces of negative news. This required Plaintiff to "demonstrate that there is a reasonable likelihood that the cause of the decline in price is due to the revelation of the truth and not the release of the unrelated negative information."[45] This showing of loss causation is a "rigorous process" and requires both expert testimony and analytical research or an event study that demonstrates a linkage between the culpable disclosure and the stock-price movement.[46]

Plaintiff's expert failed to do this. The October 4, 1999 announcement reported that the Dresser Equipment Group was experiencing lower than expected profits; that there had been a decline in the downstream engineering and construction business segment; and that the earnings of the energy services group would be flat or only slightly higher because of low spending levels by energy industry customers. As a result of these items, the release then reported lower guidance on Halliburton's third quarter earnings per share. Nettesheim indicated in her expert report that the decline in Halliburton's stock price following the October 4, 1999 release was due to the reduction in the earnings guidance and

---

[45] *Greenberg*, 364 F.3d at 665.

[46] *Fener*, 579 F.3d at 410–11; *see also Oscar*, 487 F.3d at 271 ("[T]he plaintiffs must, in order to establish loss causation at this stage, offer some empirically-based showing that the corrective disclosure was more than just present at the scene.").

recognized that the lower guidance in turn was based on more than one factor. When questioned about the report, however, Nettesheim testified that she did not perform any statistical or econometrical analyses of the three different pieces of information in the release because she was not asked to do so. Nettesheim's report indicated that her conclusions were based on statements from "news commentary and analysts." We have characterized such evidence as merely "well-informed speculation."[47]

Similarly, the January 2000 analyst reports indicated that the earnings estimate was reduced because of "less powerful synergies from the Dresser merger" *and* because of reduced expectations for offshore construction and a reduced growth estimate for oilfield spending. Although she recognized that the reports included non-culpable information, especially the decline in oilfield spending, Nettesheim presented no empirically-based evidence to show that news related to Dresser more probably affected the stock price than the other negative information.[48]

---

[47] *Oscar*, 487 F.3d at 271 (rejecting as insufficient to show loss causation "the raw opinion of analysts, without supporting study of the market at issue–such as now common use of basic principles of econometrics"). Nettesheim testified in her deposition that she could have performed a more refined analysis and had done so in other cases.

[48] *See Fener*, 579 F.3d at 409; Greenberg, 364 F.3d at 666.

Plaintiff also argues generally that several alleged corrective disclosures demonstrated the falsity of former CEO Dick Cheney's statement about Dresser that "[t]he merger with Dresser Industries is now behind us" and "[t]he potential rewards to our shareholders are vast." We think, however, that this statement, appearing in a letter in Halliburton's 1999 Annual Report, is the kind of "generalized positive statement[] about a company's progress [that is] not a basis for liability."[49]

Turning to alleged misstatements about Halliburton's accounting methodology, Plaintiff contends that Halliburton improperly recorded cost-overruns in fixed-price construction contracts as revenue by misleadingly deeming the cost-overruns "probable" of collection, even if a customer had not agreed to pay the additional amount. Plaintiff argues that Halliburton revealed the falsity of its previous accounting methods when (1) it announced on October 24, 2000, that it would undertake a massive restructuring of its construction business and (2) it announced on December 21, 2000, that it would take a fourth quarter charge of $120 million as a result of the restructuring.

Plaintiff fails to show these announcements corrected any prior misleading statements and revealed deceptive practices in Halliburton's accounting assumptions. The October 24 press

---

[49] *Nathenson*, 267 F.3d at 419 (citing *Lasker v. N.Y. State Elec. & Gas Corp.*, 85 F.3d 55, 59 (2d Cir. 1996) (observing that "broad, general statements" are "precisely the type of 'puffery' that this and other circuits have consistently held to be inactionable")).

release does not mention fixed price contracts, unapproved claims, or the method for recognition of revenue from such claims. Rather than revealing the truth about unapproved claims, the release attributes a large drop in the group's revenue to a decline in customer spending. Nettesheim's expert opinion that the October 24 disclosure concerned the company's booking of unapproved claims is also conclusory. She admitted in her deposition testimony that she did not match the October 24 statements to any particular prior misrepresentations by Halliburton.

Nettesheim's report shows that she relied for her conclusions on her examination of news reports and statements from analysts and the subsequent stock price movement. But the news reports Nettesheim cited discuss only problems and weak results generally in Halliburton's engineering and construction business. Nettesheim makes too great a leap in her conclusion that because analysts reduced earnings estimates based on weakness in Halliburton's construction business as a whole, the downgrades to estimates were due to Halliburton improperly recognizing revenue from unapproved claims. We see no such relationship evident in the statements.

Finally, we find no loss causation evident from the December 21, 2000 announcement, which indicated that the $120 million fourth quarter charge would include $25 million for reorganization costs, leaving approximately $95 million for project

specific matters.[50] As with other alleged corrective disclosures, the December 21 announcement included clearly non-culpable negative information. For example, the release informed the market about "the poor near term market outlook for the downstream engineering and construction business," which Halliburton attributed to a "consolidating customer base, difficult relationships with certain customers, and some financially stressed competitors and a fiercely competitive environment." The negative information constituted non-culpable changes in market conditions and the competitive environment that Halliburton faced, which Plaintiff's expert failed to differentiate from any allegedly culpable information.

The market recognized that Halliburton's business faced general economic difficulties and industry-wide pressures. One reporting service, CIBC World Markets, noted the following after the December 21 release:

> The customer base for [engineering and construction] is consolidating and financially pressured competitors have intensified

---

[50] Plaintiff's contention is that the $25 million is attributed to problems with the Dresser integration, and that this disclosure provided corrective information about Halliburton's prior false representations about the merger. Nettesheim conceded in her report, however, that the $25 million disclosure "does not appear to have been a surprise or a concern" to the market because some charge was already expected due to prior announcements. This portion of the December release was therefore confirmatory information and was not an actionable corrective disclosure. *See Greenberg*, 364 F.3d at 666.

> competition and pricing in the marketplace. As a result, HAL is restructuring its company into two operating segments . . . Labor disturbances in Venezuela and West Africa caused significant costs to be incurred on several large fixed-fee E&C contracts. . . . General industry-wide issues are also impacting the E&C business. Despite high oil and natural gas prices, spending for engineering and construction projects remains depressed. The difficult operating environment has forced some of Halliburton's E&C competition to cut prices and increase competitiveness.

We think the consolidating customer base, increased competition, and other "industry-wide issues," like depressed customer spending, are the kind of economic circumstances and industry-specific facts that are not actionable and must be proven by Plaintiff to have played a much lesser role in the stock price movement than alleged culpable disclosures.[51]

Nettesheim's conclusion that the December 21 disclosure related to cost- overruns in construction projects was based on news commentary. But the commentary shows reaction only to "the entire bundle of negative information," including the general downturn in Halliburton's construction business. By failing to provide empirical data to account for other negative news in the disclosure

---

[51] *See Flowserve*, 572 F.3d at 229.

that was also part of the problem with Halliburton's engineering and construction business (e.g., increased labor costs, consolidated customer base, fiercely competitive environment), Nettesheim failed to provide the necessary linkage between the change in stock price and the *allegedly culpable* information (cost-overruns). Plaintiff therefore seeks to prove loss causation from the December 21 release by improperly relying only on evidence of a decrease in stock price following the negative disclosure of a fourth quarter charge.[52] Plaintiff has failed to prove loss causation with respect to the December 21, 2000 disclosure.

VI.

After reviewing the alleged misrepresentations and corrective disclosures, we conclude that Plaintiff has failed to meet this court's requirements for proving loss causation at the class certification stage. Therefore, the district court's judgment denying the Plaintiff's motion for class certification is AFFIRMED.

---

ORDER

In light of the recent decision by the U.S. Court of Appeals for the Fifth Circuit, affirming this Court's judgment denying the Plaintiff's motion for class certification, the stay in this case is hereby **LIFTED**, and the parties are ordered to confer and file with the Clerk of Court, **no later than April 2, 2010**, a proposed schedule, and suggested approach, on how the Court should proceed with this case. If the parties cannot agree, they shall explain their differences and submit separate proposals.

SO ORDERED.

DATED: March 17, 2010.

v.	§	
HALLIBURTON COMPANY, et al.,	§	
Defendants.	§	

ORDER

Before the Court is the parties' Joint Status Report [Docket Entry #456]. The Court is of the opinion that the Motion should be GRANTED. It is therefore ORDERED that this case is stayed until May 13, 2010, which the parties advise is the deadline for Plaintiffs to file a petition for a writ of certiorari in this action. The parties are further ORDERED to submit a joint status report on May 14, 2010, advising the Court as to whether any such petition has been filed. If a petition for a writ of certiorari is timely filed, the stay shall continue until the petition is either denied or, if it is granted, until final resolution of any resulting appeal. If a petition

is not timely filed, the parties shall advise the Court in their May 14, 2010 status report of their views as to how the Court should proceed with this case, explaining their differences if they do not agree.

SO ORDERED.

March 29, 2010.

FEDERAL RULE OF CIVIL PROCEDURE 23: CLASS ACTIONS

(a) Prerequisites. One or more members of a class may sue or be sued as representative parties on behalf of all members only if:

(1) the class is so numerous that joinder of all members is impracticable;

(2) there are questions of law or fact common to the class;

(3) the claims or defenses of the representative parties are typical of the claims or defenses of the class; and

(4) the representative parties will fairly and adequately protect the interests of the class.

(b) Types of Class Actions. A class action may be maintained if Rule 23(a) is satisfied and if:

(1) prosecuting separate actions by or against individual class members would create a risk of:

(A) inconsistent or varying adjudications with respect to individual class members that would establish incompatible standards of conduct for the party opposing the class; or

(B) adjudications with respect to individual class members that, as a practical matter, would be dispositive of the interests of the other members not parties to the individual

adjudications or would substantially impair or impede their ability to protect their interests;

(2) the party opposing the class has acted or refused to act on grounds that apply generally to the class, so that final injunctive relief or corresponding declaratory relief is appropriate respecting the class as a whole; or

(3) the court finds that the questions of law or fact common to class members predominate over any questions affecting only individual members, and that a class action is superior to other available methods for fairly and efficiently adjudicating the controversy. The matters pertinent to these findings include:

(A) the class members' interests in individually controlling the prosecution or defense of separate actions;

(B) the extent and nature of any litigation concerning the controversy already begun by or against class members;

(C) the desirability or undesirability of concentrating the litigation of the claims in the particular forum; and

(D) the likely difficulties in managing a class action.

(c) Certification Order; Notice to Class Members; Judgment; Issues Classes; Subclasses.

(1) Certification Order.

(A) Time to Issue. At an early practicable time after a person sues or is sued as a class representative, the court must determine by order whether to certify the action as a class action.

(B) Defining the Class; Appointing Class Counsel. An order that certifies a class action must define the class and the class claims, issues, or defenses, and must appoint class counsel under Rule 23(g).

(C) Altering or Amending the Order. An order that grants or denies class certification may be altered or amended before final judgment.

(2) Notice.

(A) For (b)(1) or (b)(2) Classes. For any class certified under Rule 23(b)(1) or (b)(2), the court may direct appropriate notice to the class.

(B) For (b)(3) Classes. For any class certified under Rule 23(b)(3), the court must direct to class members the best notice that is practicable under the circumstances, including individual notice to all members who can be identified through reasonable effort. The notice must clearly and concisely state in plain, easily understood language:

(i) the nature of the action;

(ii) the definition of the class certified;

(iii) the class claims, issues, or defenses;

(iv) that a class member may enter an appearance through an attorney if the member so desires;

(v) that the court will exclude from the class any member who requests exclusion;

(vi) the time and manner for requesting exclusion; and

(vii) the binding effect of a class judgment on members under Rule 23(c)(3).

(3) Judgment. Whether or not favorable to the class, the judgment in a class action must:

(A) for any class certified under Rule 23(b)(1) or (b)(2), include and describe those whom the court finds to be class members; and

(B) for any class certified under Rule 23(b)(3), include and specify or describe those to whom the Rule 23(c)(2) notice was directed, who have not requested exclusion, and whom the court finds to be class members.

(4) Particular Issues. When appropriate, an action may be brought or maintained as a class action with respect to particular issues.

(5) Subclasses. When appropriate, a class may be divided into subclasses that are each treated as a class under this rule.

(d) Conducting the Action.

(1) In General. In conducting an action under this rule, the court may issue orders that:

(A) determine the course of proceedings or prescribe measures to prevent undue repetition or complication in presenting evidence or argument;

(B) require – to protect class members and fairly conduct the action--giving appropriate notice to some or all class members of:

(i) any step in the action;

(ii) the proposed extent of the judgment; or

(iii) the members' opportunity to signify whether they consider the representation fair and adequate, to intervene and present claims or defenses, or to otherwise come into the action;

(C) impose conditions on the representative parties or on intervenors;

(D) require that the pleadings be amended to eliminate allegations about representation of absent persons and that the action proceed accordingly; or

(E) deal with similar procedural matters.

(2) Combining and Amending Orders. An order under Rule 23(d)(1) may be altered or amended from time to time and may be combined with an order under Rule 16.

(e) Settlement, Voluntary Dismissal, or Compromise. The claims, issues, or defenses of a certified class may be settled, voluntarily dismissed, or compromised only with the court's approval. The following procedures apply to a proposed settlement, voluntary dismissal, or compromise:

(1) The court must direct notice in a reasonable manner to all class members who would be bound by the proposal.

(2) If the proposal would bind class members, the court may approve it only after a hearing and on finding that it is fair, reasonable, and adequate.

(3) The parties seeking approval must file a statement identifying any agreement made in connection with the proposal.

(4) If the class action was previously certified under Rule 23(b)(3), the court may refuse to approve a settlement unless it affords a new opportunity to request exclusion to individual class members who had an earlier opportunity to request exclusion but did not do so.

(5) Any class member may object to the proposal if it requires court approval under this

subdivision (e); the objection may be withdrawn only with the court's approval.

(f) Appeals. A court of appeals may permit an appeal from an order granting or denying class-action certification under this rule if a petition for permission to appeal is filed with the circuit clerk within 14 days after the order is entered. An appeal does not stay proceedings in the district court unless the district judge or the court of appeals so orders.

(g) Class Counsel.

(1) Appointing Class Counsel. Unless a statute provides otherwise, a court that certifies a class must appoint class counsel. In appointing class counsel, the court:

(A) must consider:

(i) the work counsel has done in identifying or investigating potential claims in the action;

(ii) counsel's experience in handling class actions, other complex litigation, and the types of claims asserted in the action;

(iii) counsel's knowledge of the applicable law; and

(iv) the resources that counsel will commit to representing the class;

(B) may consider any other matter pertinent to counsel's ability to fairly and adequately represent the interests of the class;

(C) may order potential class counsel to provide information on any subject pertinent to the appointment and to propose terms for attorney's fees and nontaxable costs;

(D) may include in the appointing order provisions about the award of attorney's fees or nontaxable costs under Rule 23(h); and

(E) may make further orders in connection with the appointment.

(2) Standard for Appointing Class Counsel. When one applicant seeks appointment as class counsel, the court may appoint that applicant only if the applicant is adequate under Rule 23(g)(1) and (4). If more than one adequate applicant seeks appointment, the court must appoint the applicant best able to represent the interests of the class.

(3) Interim Counsel. The court may designate interim counsel to act on behalf of a putative class before determining whether to certify the action as a class action.

(4) Duty of Class Counsel. Class counsel must fairly and adequately represent the interests of the class.

(h) Attorney's Fees and Nontaxable Costs. In a certified class action, the court may award reasonable attorney's fees and nontaxable costs that are authorized by law or by the parties' agreement. The following procedures apply:

(1) A claim for an award must be made by motion under Rule 54(d)(2), subject to the provisions of this subdivision (h), at a time the court sets. Notice of the motion must be served on all parties and, for motions by class counsel, directed to class members in a reasonable manner.

(2) A class member, or a party from whom payment is sought, may object to the motion.

(3) The court may hold a hearing and must find the facts and state its legal conclusions under Rule 52(a).

(4) The court may refer issues related to the amount of the award to a special master or a magistrate judge, as pro-vided in Rule 54(d)(2)(D).

REPLY BRIEF FOR PETITIONER

While Respondents seek to muddy the waters, one key fact remains crystal clear: No court outside of the Fifth Circuit requires a plaintiff in a securities fraud action to establish loss causation in order to certify a class. The Fifth Circuit's requirement violates Supreme Court precedent and Federal Rule of Civil Procedure 23, interjects a premature and improper merits examination into the certification inquiry, and has been rejected by every court outside of the Fifth Circuit that has addressed the issue, including the Second Circuit and, just days ago, the Seventh Circuit – which, in a unanimous decision authored by Chief Judge Easterbrook, called the Fifth's Circuit's requirement "a go-it-alone strategy" and expressly "disapprove[d]" of the Fifth Circuit's holding. *Schleicher v. Wendt*, No. 09-2154, 2010 WL 3271964, at *7 (7th Cir. Aug. 20, 2010). The conflict with the Second Circuit is not, as Respondents claim, a "shallow" one, and the conflict with the Seventh Circuit could not be more direct. Tellingly, Respondents are unable to provide a coherent justification for the Fifth Circuit's unique rule that a securities plaintiff must demonstrate loss causation—an element of a securities fraud claim separate from reliance—at class certification to invoke the fraud on the market presumption of reliance. Nor are Respondents correct that this case is an inapposite vehicle for resolving this circuit split. The issue here is a purely legal one, and but for the Fifth Circuit's rule, the district court stated it would have certified the class in this case. Pet. App. 4a.

I. THE FIFTH CIRCUIT IS AN OUTLIER IN REQUIRING PROOF OF LOSS CAUSATION AT CLASS CERTIFICATION

No other circuit requires proof of loss causation to certify a class under the fraud-on-the-market presumption of reliance. Defendants quibble with the degree and severity of conflict but cannot deny it. *All* cases outside the Fifth Circuit that have addressed the holding in *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007)—including the Second and Seventh Circuits and district courts in six other circuits—have affirmatively rejected *Oscar* or otherwise declined to follow it. *See, e.g.*, Pet. 13, 15-17. Even the circuit courts that have yet to expressly address *Oscar*—reaffirmed and further tightened by the Fifth Circuit in the case at bar—do not require proof of loss causation to invoke the fraud on the market presumption. *See, e.g.*, Pet. 15. It is irrelevant that some of those cases predate *Oscar* since they are still the controlling authority in their respective circuits. A conflict is a conflict even if other circuits have not expressly disavowed *Oscar*, as the Seven Circuit recently did, declaring: "*Oscar Private Equity* represents a go-it-alone strategy by the fifth circuit. It is not compatible with this circuit's decisional law . . . and we disapprove its holding. It has not been adopted by any other circuit, and it has been rejected implicitly by some." *Schleicher*, 2010 WL 3271964, at *7 (citing *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 479, 483 (2d Cir. 2008), as rejecting *Oscar*).

Given the number of courts that have rejected *Oscar*, *see* Pet. 15-17, no further "percolation" is needed. Opp. 2. With the Seventh Circuit's opinion in *Schleicher*, the circuit split is wider than ever, and absent a ruling from this Court, the temptation to engage in forum shopping given the broad venue provision governing federal securities actions, *see* 15 U.S.C. § 78aa, will be nearly irresistible. The time has come for this Court to resolve this split of authority on an important and recurring issue, and this case is an apt vehicle for doing so. Because Petitioner would *not* have been required to prove loss causation at the class certification stage in any other circuit, and because that requirement is the *sole* reason the district court declined to certify a class here, Pet. App. 4a, the outcome of this case would clearly have been different in every other circuit.

A. The Fifth Circuit Sets A Virtually Unattainable Bar

The Fifth Circuit's unique requirement that a plaintiff must prove loss causation at class certification by a preponderance of the evidence without merits discovery sets a virtually unattainable standard. The Seventh Circuit recently held that if plaintiffs had to demonstrate that "the contested statements actually caused material changes in stock prices," plaintiffs would be required to "prove everything (except falsity) required to win on the merits" before a class could be certified. *Schleicher*, 2010 WL 3271964, at *2. Imposing such a standard, the court noted, "would end the use of class actions in securities cases." *Id.* The court explained:

> The particular step that the fifth circuit took in *Oscar Private Equity* would do more than just "tighten" the requirements for class certification. It would make certification impossible in many securities suits, because when true and false statements are made together it is often impossible to disentangle the effects with any confidence.

Id. at *6.[1]

Respondents' contention that the Court should decline to hear this case because it involves review of an interlocutory order is likewise without merit and effectively insulates the Fifth Circuit rule from any review. Rule 23(f) was added precisely to authorize interlocutory review of class certification decisions where important issues are at stake, as is the case here. *See* FED. R. CIV. P. 23 Advisory Committee Notes, 1998 Amendments. Nor do this Court's rules and practices prohibit review of this case. "[W]here . . . there is some important and clear-cut issue of law that is fundamental to the further conduct of the case and that would otherwise qualify as a basis for

---

[1] Respondents invoke *Alaska Electrical Pension Fund v. Flowserve Corporation*, 572 F.3d 221 (5th Cir. 2009), to argue the Fifth Circuit "does not require a 'confession' of fraud in the negative disclosure." Opp. 27. The opinion in this case, however, "set a considerably more demanding test" than that in *Flowserve*. Pet. 11 n.5. In any event, *Flowserve* requires proof of loss causation (and so conflicts with the Second and Seventh Circuits); it just establishes a slightly less onerous test for what is required to prove it.

certiorari, the case may be reviewed despite its interlocutory status. . . ." EUGENE GRESSMAN ET AL., SUPREME COURT PRACTICE § 4.18, 281 (9th ed. 2007).[2] Respondents offer no practical advantage to delaying review of this decision until after final judgment, and, indeed, no such justification exists. The questions presented here are purely questions of law, and it is undisputed that they are effectively dispositive of this case. Pet. 18 n.17. Moreover, because of the prohibitive cost of prosecuting a securities action for individual named plaintiffs only, the Fifth Circuit's rule, which "would end the use of class actions in securities cases," *Schleicher*, 2010 WL 3271964, at *2, is likely never to reach this Court except on an interlocutory basis.

B. The Second Circuit Does Not Require Proof Of Loss Causation At The Class Certification Stage

Respondents' contention that the conflict between the Fifth Circuit and Second Circuit is "illusory," Opp. 7, and that the Second Circuit's holding in *Salomon* is "substantively indistinguishable" from the Fifth Circuit's holdings in *Oscar* and the present case, Opp. 8, is patently untrue. Indeed, the two circuits reached virtually opposite conclusions. *Compare Salomon*, 544 F.3d at 483 ("[P]laintiffs do not bear the burden of showing an impact on price.") *with Oscar*, 487 F.3d at 265 ("[W]e require proof that the misstatement *actually*

---

[2] This action has been stayed virtually since the district court denied class certification, Pet. 18 n.17, which also weighs in favor of accepting this interlocutory appeal. *See* GRESSMAN, SUPREME COURT PRACTICE § 4.18, 283.

moved the market."). This conflict has been repeatedly recognized by courts and commentators alike. *See, e.g., Schleicher*, 2010 WL 3271964, at *7 (*Oscar* "rejected implicitly by" *Salomon*); *In re Am. Int'l Group, Inc. Sec. Litig.*, 265 F.R.D. 157, 181 (S.D.N.Y. 2010); *In re Initial Pub. Offering Sec. Litig.*, 260 F.R.D. 81, 106 n.214 (S.D.N.Y. 2009) ("At the class certification stage, plaintiffs need not demonstrate loss causation. It is sufficient for plaintiffs to prove only that loss causation can be shown on a class-wide basis."); *In re Boston Scientific Corp. Sec. Litig.*, 604 F. Supp. 2d 275, 285-86 (D. Mass. 2009); Martin Flumenbaum & Brad S. Karp, *Reach of 'Basic's' 'Fraud-on-the-Market Presumption'*, 240 N.Y.L.J. 3 (2008) (*Salomon* "is now squarely at odds with the Fifth Circuit's decision in *Oscar*.").

Respondents' claim that the conflict between the Fifth and Second Circuits is a shallow one rests solely on their assertion that the showing to rebut the fraud-on-the-market presumption is minimal. That assertion—now largely irrelevant following the Seventh Circuit's opinion in *Schleicher*—is incorrect. In *Salomon*, the Second Circuit held that "defendants are allowed to rebut the [fraud-on-the-market] presumption," and remanded the case for presentation of rebuttal evidence. 544 F.3d at 484-86. In *Basic Inc. v. Levinson*, 485 U.S. 224, 248 (1988), this Court stated that "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price, will be sufficient to rebut the presumption of reliance." Respondents seize on the

word "any" to argue that defendants bear a "relatively light burden", Opp. 9, but the key word is "sever." By requiring evidence that *severs* the link, this Court made clear that the presumption is not a bubble bursting one and does not dissolve in the face of *any* contrary evidence. Consistent with *Basic*, to rebut the presumption, defendants in *Salomon* must make a substantial evidentiary showing. In the Fifth Circuit, by contrast, it was Petitioner who bore the burden of establishing loss causation by the preponderance of the evidence. Thus, a real and substantial difference exists between the Fifth and Second Circuit's requirements. In any event, there can be no doubt that controlling precedent in the Fifth and Seventh Circuits are now diametrically opposed.

The Respondents have not "severed" the basis for the application of the fraud-on-the-market presumption in this case. They did not even attempt to make such a rebuttal showing, and the district court did not purport to determine whether they had, because under controlling Fifth Circuit precedent, the burden is improperly shifted squarely to the plaintiff to establish loss causation. *See* Pet. App. 115a, 136a. Respondents did not show that the price of Halliburton stock did not incorporate the relevant information or that the plaintiffs did not rely on the integrity of the market price. In fact, Respondents admitted that Halliburton trades on an efficient market. Pet. App. 115a.[3] Respondents also

---

[3] Accordingly, this class would have been certified in the Seventh Circuit. *See Schleicher*, 2010 WL 3271964, at *1 ("When a company's stock trades in a large and efficient

failed to show that the stock price dropped for reasons other than the corrective disclosure. Rather, the court of appeals concluded that even though Petitioner showed that the price of Halliburton's stock dropped following corrective disclosures (after accounting for market and industry factors through an event study, Pet. App. 5a), Petitioner failed to establish loss causation, either because the corrective disclosure did not reveal the fraud or because Petitioner did not separate the effect of simultaneously released culpable and negative, but non-culpable, disclosures. *See, e.g.*, Pet. App. 15a, 19a, 23a, 26a, 29a, 31a, 36a, 41a, 48a, 52a-53a, 125a-135a.[4]

---

market, the contestable elements of the Rule 10b-5 claim reduce to falsehood, scienter, materiality, and loss. Because each investor's loss usually can be established mechanically, common questions predominate and class certification is routine, if a suitable representative steps forward.").

[4] Respondents' claim that *In re Flag Telecom Holdings, Ltd. Securities Litigation*, 574 F.3d 29 (2d Cir. 2009), "confirms that the absence of loss causation defeats class certification within the Second Circuit," Opp. 11 n.2, lacks merit. The *Flag* case involved an unusual set of facts where the plaintiffs in that case were frequent traders. The Second Circuit held that the issue of loss causation was relevant to the district court's determination of whether the Class Representative was "both an adequate and typical representative of the class." 574 F.3d at 40. The issue of loss causation was "relevant to [Federal] Rule [of Civil Procedure] 23(a) for reasons that [did] not implicate either predominance or *Basic*." *Id.* at 39-40.

C. The Third Circuit Does Not Require Proof Of Loss Causation At The Class Certification Stage

Nor does the discussion of materiality in *In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410 (3d Cir. 1997), support the Fifth Circuit's holding, as Respondents contend. Opp. 13. The Third Circuit did not and could not redefine materiality in contravention of this Court's definition in *Basic*. *See Basic*, 485 U.S. at 231-32; Pet. 21 n.19. Rather, in ruling on an appeal from an order granting a motion to dismiss, the Third Circuit made the limited point that if the complaint itself alleges that a statement did not affect the price of the stock, the complaint demonstrates the statement was not material. *Burlington*, 114 F.3d at 1425. Respondents' citation, Opp. 13, to *Newton v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154 (3d Cir. 2001), is equally misplaced. In *Newton*, investors sued their broker-dealers for allegedly breaching their duty of best execution by failing to investigate other alternatives that offered lower prices to investors. 259 F.3d at 162. The fraud on the market theory had no application to that claim because defendants did not make any public assertions to the market place, a prerequisite for invoking the theory. *See id.* at 173, 180.

II. THE FIFTH CIRCUIT'S HOLDING CONFLICTS WITH SUPREME COURT PRECEDENT AND THE FEDERAL RULES OF CIVIL PROCEDURE

A. The Fifth Circuit's Holding Conflicts With *Basic* and Related Cases

Contrary to Respondents' claims, the decision below does *not* "faithfully interpret[] *Basic*." Opp. 22. While *Basic might* arguably give lower courts *some* room to develop the fraud on the market doctrine, it does not allow them to negate the presumption established in that case. *See Schleicher*, 2010 WL 3271964, at *6 ("Unlike the fifth circuit, we do not understand *Basic* to license each court of appeals to set up its own criteria for certification of securities class actions or to 'tighten' Rule 23's requirements."). Respondents invoke the language from *Basic* that the fraud-on-the-market presumption may be rebutted by "any showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price." *See Basic*, 485 U.S. at 248; *supra* Section I.B. Respondents read that phrase to require plaintiffs to prove loss causation at class certification, but that language cannot support such an expansive reading, and *no* court outside the Fifth Circuit has found that phrase permits or requires such a seismic doctrinal shift.[5]

---

[5] Respondents also claim that *Basic* "made clear" that defendants can "rebut proof of the elements giving rise to the presumption, *or show that the misrepresentation in fact did not*

Likewise, Respondents' contention that the Fifth Circuit's holding is consistent with *Stoneridge Investment Partners LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008), and *Merck & Co. v. Reynolds*, 130 S. Ct. 1784 (2010), Opp. 26, is without merit. Respondents cannot negate the fact that the *Stoneridge* Court endorsed the holding in *Basic* without indicating plaintiffs were also required to prove loss causation in order to invoke the *Basic* presumption. *See* 552 U.S. at 159; Pet. 20. As to *Merck*, Respondents claim the Fifth Circuit does not require proof of scienter without discovery, Opp. 26, but ignore the repeated assertions to the contrary in the Fifth Circuit's opinion. *See, e.g.*, Pet. 6-7, 11, 24-25; Pet. App. 121a, 122a, 125a-127a.

B. The Fifth Circuit's Holding Is Inconsistent With *Eisen* And The Federal Rules Of Civil Procedure

The Fifth Circuit rule requires an improper merits analysis—beyond that which is necessary for certification under Federal Rule of Civil Procedure 23 because loss causation turns on common evidence—and so is incompatible with *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974), and Rule 23. *See* Pet. 34-37. As the Seventh Circuit observed,

---

lead to a distortion of price." Opp. 23-24. That language is from the *Basic* Court's description of the holding of the lower court in that case and is not part of the Court's holding. *See Basic*, 485 U.S. at 248. Respondents' broad reading of that phrase is also inconsistent with the lower court opinion, which this Court was merely describing in that sentence. *See Levinson v. Basic Inc.*, 786 F.2d 741, 750 n.6 (6th Cir. 1986).

the Fifth Circuit's rule is driven by an apparent concern that class certification will create undue settlement pressure on defendants. *Schleicher*, 2010 WL 3271964, at *5 (citing *Oscar*, 487 F.3d at 266-70). The Seventh Circuit correctly rejected the view, implicitly endorsed by the Fifth Circuit, that "class certification is proper only when the class is sure to prevail on the merits." *Id.* Indeed, the Seventh Circuit noted:

> To the extent [*Oscar*] holds that class certification is proper only after the representative plaintiffs establish by a preponderance of the evidence everything necessary to prevail, *Oscar Private Equity* contradicts the decision, made in 1966, to separate class certification from the decision on the merits.

Schleicher, 2010 WL 3271964, at *6 (citing *Eisen*, 417 U.S. 156). The Seventh Circuit further explained that Congress had addressed concerns about securities class actions by imposing enhanced pleading requirements and ensuring securities litigation "occurs in federal court under these special standards." *Id.* The court said that any further measures required legislation and should be addressed by Congress, not the judiciary, declaring: "We do not think it appropriate for the judiciary to make its own further adjustments by reinterpreting Rule 23 to make likely success on the merits essential to class certification in securities-fraud suits." *Id.* As the Seventh Circuit recognized, the

Fifth Circuit overstepped its bounds and infringed on the prerogative of Congress and of this Court.

CONCLUSION

The petition for a writ of certiorari should be granted.

Respectfully submitted,

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE FIFTH CIRCUIT

BRIEF FOR THE UNITED STATES AS AMICUS CURIAE

INTEREST OF THE UNITED STATES

This brief is submitted in response to the Court's order inviting the Acting Solicitor General to express the views of the United States. In the view of the United States, the petition for a writ of certiorari should be granted.

STATEMENT

1. Section 10(b) of the Securities and Exchange Act of 1934 makes it unlawful for any person "[t]o use or employ, in connection with the purchase or sale of any security * * *, any manipulative or deceptive device or contrivance in contravention of" rules promulgated by the Securities and Exchange Commission (SEC). 15 U.S.C. 78j(b). The SEC's Rule 10b-5 implements

Section 10(b). As relevant here, the Rule makes it unlawful for any person, in connection with the purchase or sale of a security, "[t]o make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading." 17 C.F.R. 240.10b-5(b).

This Court has construed Section 10(b) to provide a private right of action. See *Dura Pharms., Inc.* v. *Broudo*, 544 U.S. 336, 341 (2005) (citing cases). In order to recover in a private action under Section 10(b) and Rule 10b-5(b), a private plaintiff must prove the following elements: (1) the defendant made a material misrepresentation or omission; (2) the defendant acted with scienter; (3) a connection between the misrepresentation or omission and the purchase or sale of a security; (4) the plaintiff's reliance upon the misrepresentation or omission; (5) economic loss; and (6) loss causation, meaning that the defendant's misrepresentation or omission proximately caused the plaintiff's loss. *Id.* at 341-342; see, *e.g.*, *Stoneridge Inv. Partners, LLC* v. *Scientific-Atlanta*, 552 U.S. 148, 157 (2008).

In *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), this Court discussed the manner in which plaintiffs in a securities-fraud class action may establish reliance. *Id.* at 241-248. The Court recognized that "[r]equiring proof of individualized reliance from each member of the proposed plaintiff class" often would "prevent[] [plaintiffs] from proceeding with a class action, since individual issues then would * * * overwhelm[] the common ones." *Id.* at 242. The Court held that plaintiffs may overcome that obstacle by invoking a rebuttable presumption of reliance based on the fraud-on-the-market theory. *Id.* at 242-247. Under that theory, the Court

explained, the price of a stock in an efficient market reflects "publicly available information," including "any public material misrepresentations," and "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price." *Id.* at 247. The Court noted that a defendant may rebut the presumption of reliance arising from that theory through "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price." *Id.* at 248.

2. Petitioner is the lead plaintiff in a putative securities-fraud class action against Halliburton Co. and one of its officers (respondents in this Court). Pet. App. 113a-114a. Petitioner alleges that respondents attempted to inflate Halliburton's stock price by downplaying the company's estimated asbestos liabilities, overstating its revenue in its engineering and construction business, and overstating the benefits of its merger with Dresser Industries. *Id.* at 4a-5a, 11a. Petitioner alleges that respondents subsequently made corrective disclosures about these matters that caused Halliburton's stock price to decline. *Id.* at 5a, 11a.

Petitioner sought to certify a class of all persons who purchased Halliburton common stock between June 3, 1999, and December 7, 2001. See Pet. App. 4a, 66a-67a. The district court denied the class-certification motion. *Id.* at 3a-55a. The court determined that "the Proposed Class satisfied Federal Rule of Civil Procedure 23 as to numerosity, commonality, typicality, and adequacy of [petitioner] as a class representative," and that a class action generally "would be the superior method for adjudicating the claims of these class members." *Id.* at 3a-4a. The court held, however, that it could not certify the

class because petitioner had failed to prove loss causation. *Id.* at 4a.

The district court enumerated the elements of a private securities-fraud claim and noted that, "[i]n class action securities cases such as this one, plaintiffs can satisfy the reliance requirement through the fraud-on-the market theory." Pet. App. 6a. The court explained, however, that the Fifth Circuit had recently "tightened" the requirements for class certification by requiring "[p]laintiffs * * * to demonstrate loss causation in order to trigger the fraud-on-the-market presumption of class reliance." *Ibid.* (citing *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (5th Cir. 2007) (*Oscar*)). Under the Fifth Circuit's decision in *Oscar*, the district court observed, loss causation must be "established at the class certification stage by a preponderance of all admissible evidence." *Ibid.* (quoting *Oscar*, 487 F.3d at 269). The court reviewed the evidence in this case and concluded that petitioner had failed to satisfy that requirement. *Id.* at 11a-54a. The court stated that, but for petitioner's failure to prove loss causation, it would have certified the class. *Id.* at 4a, 54a.

3. The court of appeals affirmed. Pet. App. 111a-136a. Relying on its prior decision in *Oscar*, the court stated that "[i]n order to obtain class certification on its claims, [petitioner] was required to prove loss causation, i.e., that the corrected truth of the former falsehoods actually caused the stock price to fall and resulted in losses." *Id.* at 113a. The court explained that, even when a putative securities-fraud class representative "create[s] a rebuttable presumption of reliance under the fraud-on-the-market theory" by validating the assumptions set out in *Basic*, it may not actually "take

advantage of the fraud-on-the-market presumption of reliance" unless it also shows loss causation. *Id.* at 114a-115a. The court characterized this additional requirement as a "rigorous" one that typically "requires both expert testimony and analytical research or an event study that demonstrates a linkage between the culpable disclosure and the stock-price movement." *Id.* at 130a. After reviewing all of the evidence in this case, the court of appeals concluded that petitioner had failed to meet this burden, and the court affirmed the denial of class certification. *Id.* at 123a-136a.

DISCUSSION

The court of appeals held that, when the named plaintiff in a putative securities-fraud class action relies on the fraud-on-the-market theory to establish a presumption of reliance, the plaintiff must demonstrate loss causation to obtain class certification. The court erred at the outset by considering loss causation at the class-certification stage without determining that it was relevant to any of the prerequisites for class certification under Federal Rule of Civil Procedure 23. The court then compounded that error by requiring plaintiffs to prove loss causation by a preponderance of the evidence. As a result, the court requires plaintiffs to prove a significant element of their case at the class-certification stage, without the benefit of full discovery and without consideration of their claims by a jury.

Nothing in *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), supports the Fifth Circuit's approach. The Court in *Basic* approved the fraud-on-the-market theory as a way for a plaintiff class to show that common issues of fact and law predominate on the question of reliance. The Court in *Basic* did not address the separate element

of loss causation, and this Court's later decision in *Dura Pharmaceuticals, Inc.* v. *Broudo*, 544 U.S. 336 (2005), makes clear that the two elements are conceptually distinct. In particular, the Court in *Basic* did not suggest that, where the evidence regarding loss causation will be common to all members of the putative class, a court may nevertheless deny class certification based on the plaintiffs' inability to prove that element of their case.

The Fifth Circuit's approach to class certification in securities-fraud cases conflicts with the decisions of two other courts of appeals. The Seventh Circuit has expressly rejected the Fifth Circuit's approach. The Second Circuit, while allowing some consideration of the merits at the class-certification stage, does not require the putative class representative to prove loss causation. The question presented is a recurring and important one, and this case provides a suitable vehicle for addressing it. Accordingly, the petition for a writ of certiorari should be granted.

A. The Court Of Appeals Erred By Considering Loss Causation At The Class-Certification Stage Without Relating That Inquiry To The Rule 23 Requirements

1. In order to certify a case as a class action, a federal district court must determine that the proposed class satisfies all of the requirements contained in Federal Rule of Civil Procedure 23. See, *e.g.*, *Shady Grove Orthopedic Assocs., P.A.* v. *Allstate Ins. Co.*, 130 S. Ct. 1431, 1437 (2010) (*Shady Grove*); *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156, 162-163 (1974). Under Section (a) of that rule, the named plaintiff must show that "the class is so numerous that joinder of all members is impracticable"; that "there are questions of law or fact common to the class"; that "the claims or defenses of the

representative parties are typical of the claims or defenses of the class"; and that "the representative parties will fairly and adequately protect the interests of the class." Fed. R. Civ. P. 23(a). The named plaintiffs must also establish that the suit falls within one of the three categories of class actions described in Section (b) of the rule. Here, petitioner sought class treatment on the ground that "questions of law or fact common to class members predominate over any questions affecting only individual members" and "a class action is superior to other available methods for fairly and efficiently adjudicating the controversy." Fed. R. Civ. P. 23(b)(3); see Pet. Mot. for Class Certification 14-19 (Sept. 17, 2007) (Docket entry No. 341).

2. In *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261 (2007), the Fifth Circuit offered essentially three justifications for its rule that the named plaintiff in a securities-fraud suit must establish loss causation for a class to be certified. First, the court viewed *Basic* as "allow[ing] each of the circuits to develop its own fraud-on-the-market rules," and stated that it had "used this room" in several cases to "tighten the requirements" for class certification to counteract the "extraordinary leverage" class certification bestows upon plaintiffs. 487 F.3d at 264-265, 267 (internal quotation marks omitted). Second, the court stated that placing the burden on plaintiffs to prove loss causation at the class-certification stage was consistent with the *Basic* Court's recognition that a defendant may rebut the presumption of reliance. *Id.* at 265. Third, the court suggested that a plaintiff's inability to prove loss causation may indicate that the alleged misrepresentations did not actually affect the company's stock price, even if

the plaintiff has established the prerequisites to invocation of the fraud-on-the-market theory. *Id.* at 269-270.

None of those rationales links proof of loss causation to the prerequisites for class certification under Rule 23. First, the Fifth Circuit's view that class actions bestow "extraordinary leverage" upon plaintiffs (*Oscar*, 487 F.3d at 267) does not authorize it to impose requirements above and beyond those specified in Rule 23. As this Court recently explained, "by its terms" Rule 23 "creates a categorical rule entitling a plaintiff whose suit meets the specified criteria to pursue his claim as a class action." *Shady Grove*, 130 S. Ct. at 1437. To the extent that policy concerns counsel in favor of "tighten[ing]" the availability of securities-fraud class actions, the responsibility for addressing those concerns rests with Congress rather than the courts. See, *e.g.*, *Tellabs, Inc.* v. *Makor Issues & Rights, Ltd.*, 551 U.S. 308, 313 (2007) (noting heightened pleading requirements imposed in the Private Securities Litigation Reform Act of 2005 (PSLRA), 15 U.S.C. 78u-4); *Schleicher* v. *Wendt*, 618 F.3d 679, 686 (7th Cir. 2010) (noting steps Congress has taken in the PSLRA and Securities Litigation Uniform Standards Act of 1998, 112 Stat. 3227, and stating that the court "do[es] not think it appropriate for the judiciary to make its own further adjustments by reinterpreting Rule 23 to make likely success on the merits essential to class certification in securities-fraud suits").

The *Oscar* court's second and third rationales likewise provide no sound basis for requiring a plaintiff to prove loss causation to make class treatment appropriate. To be sure, the fraud-on-the-market theory is relevant to the district court's class-certification decision. In securities-fraud cases where the fraud-on-the-market presumption is inapplicable, each plaintiff must offer

particularized proof that it relied on the defendant's misstatements; individual issues will predominate over the common ones; and class certification will not be appropriate under Rule 23(b)(3). See *Basic*, 485 U.S. at 242; *Schleicher*, 618 F.3d at 685 ("If something about 'the merits' also shows that individual questions predominate over common ones, then certification may be inappropriate."). But so long as the plaintiff has established that the fraud-on-the-market theory is applicable—generally by showing that the defendant's alleged misrepresentations were made publicly, that the company's shares were traded in an efficient market, and that the plaintiff traded shares between the time the misrepresentations were made and the time the truth was revealed, see *Basic*, 485 U.S. at 241-242, 247-248—then the plaintiff has shown that common questions predominate on the question of reliance. If the plaintiffs are subsequently unable to prove that they suffered any loss as a result of the alleged misrepresentations, the defendant will prevail on the merits, but the presence or absence of such proof is irrelevant to the question of class certification.

With respect to loss causation, the only relevant question at the class-certification stage is whether resolution of the loss-causation issue can be expected to turn on proof that is common to class members generally. So long as the loss-causation issue "affects investors in common" and therefore "can be made on a class-wide basis," a court may not deny class certification based on its view that the plaintiffs cannot prove that element of their claims. *Schleicher*, 618 F.3d at 687. In neither *Oscar* nor in this case, however, did the Fifth Circuit suggest that the loss-causation inquiry would vary from plaintiff to plaintiff in a way that would prevent common issues

from predominating. Rather, the clear thrust of the court's analyses in both cases was that proof of loss causation was lacking with respect to *all* members of the class. The Fifth Circuit erred by denying class certification on a ground unrelated to the requirements of Rule 23.

B. The Court Of Appeals Compounded Its Error By Requiring Plaintiffs To Prove Loss Causation By A Preponderance Of The Evidence At The Class-Certification Stage

1. In *Eisen*, this Court considered whether Rule 23 allows a district court to consider the merits of a plaintiff's claims "as part of the determination whether a suit may be maintained as a class action." 417 U.S. at 177-179. In that case, the district court had conducted a "preliminary hearing on the merits" to determine whether the plaintiff or the defendants should bear the cost of notice to the class. *Id.* at 168. This Court disapproved that approach, "find[ing] nothing in either the language or the history of Rule 23" to support conducting such an inquiry before certifying a case as a class action. *Id.* at 177.

The Court explained that, at the class-certification stage, "the question is not whether the plaintiff or plaintiffs have stated a cause of action or will prevail on the merits, but rather whether the requirements of Rule 23 are met." *Eisen*, 417 U.S. at 178 (quoting *Miller* v. *Mackey Int'l*, 452 F.2d 424, 427 (5th Cir. 1971)). Accordingly, *Eisen* concluded that courts may consider the merits of the plaintiff's claims at the class-certification stage only when necessary to determine whether the proposed plaintiff class meets the requirements of Rule 23. See *id.* at 177-178; see also, *e.g.*, Fed. R. Civ. P. 23(c)(1) advisory committee's note (2003) ("an evaluation

of the probable outcome on the merits is not properly part of the certification decision").

2. The court below, relying on *Oscar*, stated that a plaintiff in a putative securities-fraud class action is required to prove loss causation "at the class certification stage by a preponderance of all admissible evidence." Pet. App. 115a (quoting *Oscar*, 487 F.3d at 269). Because petitioner alleged that respondents had made false statements followed by corrective disclosures that resulted in losses to the class members, the court stated that petitioner must show that respondent's alleged corrective disclosures were "*related* to the false, non-confirmatory positive statement made earlier" and "that it is *more probable than not* that it was this related corrective disclosure, and not any other unrelated negative statement, that caused the stock price decline." *Id.* at 119a-120a (internal quotation marks omitted). The court called this showing "rigorous" and stated that it generally "requires both expert testimony and analytical research or an event study that demonstrates a linkage between the culpable disclosure and the stock-price movement." *Id.* at 130a; see *Oscar*, 487 F.3d at 270-271. The court then conducted a thorough (and thoroughly premature) merits analysis, addressing each alleged misstatement and corrective disclosure in turn before concluding that petitioner had failed to prove that the class losses were likely caused by respondents' corrective disclosures. Pet. App. 123a-136a.

As explained above, the court of appeals erred at the outset by going beyond the Rule 23 criteria and assessing the putative class members' ability to prove their case on the merits. The court compounded that error through the standard of proof that it imposed. The court of appeals did not simply ask whether petitioner

had adequately *alleged* loss causation or whether petitioner had established a *prima facie* case on that element (either of which would have exceeded the court's authority at the class-certification stage), but instead required petitioner to prove loss causation by a preponderance of the evidence. That approach improperly preempts the merits inquiries that occur at the summary-judgment stage and at trial.

The Fifth Circuit's rule requires plaintiffs to adduce significant admissible evidence at an unduly early stage of the litigation. Under *Oscar*, a plaintiff may not simply allege a theory of loss causation, or even produce analysts' reports opining that a drop in the stock price was attributable to the defendant's correction of a prior misrepresentation. 487 F.3d at 270-271. Instead, simply to obtain class certification, the plaintiff must do what would otherwise be done at the merits stage after full discovery—the plaintiff must produce empirical evidence such as an event study to analyze all possible causes of the drop in stock price, and must prove that it is "more probable than not" that the corrective disclosure, and not some other piece of bad news, caused the drop in stock price. *Id.* at 270.

The lengthy analyses of loss causation performed by the courts below attest to the fact that full consideration of loss causation is a detailed and complex inquiry. Under Rule 23, however, class certification is to be decided "[a]t an early practicable time after a person sues or is sued as a class representative." Fed. R. Civ. P. 23(c)(1). At that point, discovery may not be complete, or even substantially underway. The Fifth Circuit erred by re-

quiring plaintiffs to prove loss causation at that early stage of the lawsuit.[1]

Even in cases where discovery would not meaningfully supplement the range of available evidence bearing on loss causation, the Fifth Circuit's approach improperly requires district courts to usurp the role of juries in resolving disputed loss-causation issues. In order to obtain summary judgment, a defendant must show that, viewing the evidence in the light most favorable to the plaintiff, there are no genuine issues of material fact for trial. See, *e.g.*, *Celotex Corp.* v. *Catrett*, 477 U.S. 317, 323-324 (1986); *Adickes* v. *S.H. Kress & Co.*, 398 U.S. 144, 157 (1970); Fed. R. Civ. P. 56(c). Summary judgment is not appropriate if "there are any genuine factual issues that properly can be resolved only by a finder of fact because they may reasonably be resolved in favor of either party." *Anderson* v. *Liberty Lobby, Inc.*, 477 U.S. 242, 250 (1986). Under the Fifth Circuit's approach, however, the district court must decide at the class-certification stage whether the named plaintiff has proved loss causation by a preponderance of the evidence, not simply whether a reasonable fact-finder could so conclude. That standard denies class plaintiffs in securities-fraud suits the opportunity to have loss-

[1] A named plaintiff's lack of access to discovery at the class-certification stage of a securities-fraud suit is particularly significant if the Fifth Circuit's opinion in this case is read to require proof of scienter as well as (or as a supposed component of) loss causation. Compare Pet. App. 123a n.35 (plaintiff need not prove "intentional fraud" at class certification) with *id.* at 121a-122a (loss-causation showing requires proof that "the corrective disclosure shows the misleading or deceptive nature of the prior positive statements" and that "the corrective disclosure more probably than not shows that the original estimates were designed to defraud"). Proof that the defendant acted with scienter may be particularly difficult to adduce before discovery has taken place.

causation issues resolved by a jury. See *Tellabs*, 551 U.S. at 326-328 (recognizing that plaintiffs are entitled to have their securities-fraud claims decided by a jury once a sufficient initial showing has been made).

C. Nothing In *Basic* Or The Fraud-On-The-Market Theory For Presuming Reliance Supports The Fifth Circuit's Requirement That Plaintiffs Prove Loss Causation At The Class-Certification Stage Of A Securities-Fraud Suit

In defending the court of appeals' approach, respondents contend (Br. in Opp. 23) that this Court's decision in *Basic* requires a named plaintiff to show that the defendant's misrepresentations actually affected stock prices in order to obtain class certification. Respondents further contend that "[l]oss causation * * * is central to the presumption of reliance" (*ibid.*), and they suggest (*id.* at 9-11) that the Fifth Circuit appropriately placed on petitioner the burden of proving loss causation. Each of those propositions is incorrect.

1. As explained above, a court in ruling on a class-certification request may consider the merits of the named plaintiff's claims only to the extent that merits-related issues bear on the criteria set forth in Rule 23. *Basic* did not generally suggest that securities-fraud suits are an exception to that general principle, nor did it specifically hold that the class-certification decision in a securities-fraud suit turns on whether the defendant's alleged misrepresentations actually affected the price of the relevant security. To be sure, if the defendant seeks to rebut the fraud-on-the-market presumption, the finder of fact may ultimately be required to determine whether actual market distortion occurred. But so long as the market-distortion inquiry turns on factual or legal

issues that are common to the members of the putative class, class certification is appropriate regardless of the perceived likelihood at that early stage that the plaintiffs will be able to establish that element of their claims on the merits. See *Schleicher*, 618 F.3d at 685.

Respondents rely in part (Br. in Opp. 23) on this Court's suggestion in *Basic* that a plaintiff who invokes the fraud-on-the-market presumption "must allege and prove" five enumerated elements, including "that the [defendant's] misrepresentations would induce a reasonable, relying investor to misjudge the value of the shares." 485 U.S. at 248 n.27. The Court in that passage was describing the analysis of the Sixth Circuit in the decision it was reviewing, and the Sixth Circuit's discussion of that element is illuminating. The Sixth Circuit explained that the plaintiff in that case had clearly satisfied four of the five requirements for invoking the fraud-on-the-market presumption and that "[t]he only real question then is element (4)—whether the plaintiffs can prove that a reasonable investor who was aware of the defendant's statements would have undervalued the stock." *Levinson* v. *Basic Inc.*, 786 F.2d 741, 750 (1986), vacated by 485 U.S. 224 (1988). The court then stated:

> The plaintiffs claim that the misrepresentations were intended to and did deflate the price of Basic's stock. This allegation satisfies element (4) for pleading purposes and should not be dismissed as a matter of law. If the plaintiffs are able to prove this and the other elements, it will be quite logical to presume that some investors relied on the misrepresentations resulting in a deflation of stock price and that members of the class relied upon the supposed integrity of the market price when selling their shares. The mere

> fact that the proof could be difficult does not preclude the opportunity to make the presentation *at trial*.

Id. at 750-751 (citation omitted; emphasis added).

The court of appeals in *Basic* thus clearly contemplated that any disputes concerning the actual effect on stock prices of the defendant's alleged misrepresentations would be resolved *at trial*. Respondent's contention that the district court must decide that factual issue as part of its threshold class-certification determination is inconsistent with the Sixth Circuit's analysis. And nothing in this Court's opinion in *Basic* suggests that the Court intended to impose more demanding class-certification requirements than those described by the court of appeals in *Basic*. See note 3, *infra*.

2. This Court's subsequent decision in *Dura Pharmaceuticals, Inc.* v. *Broudo*, *supra*, highlights the fact that reliance and loss causation are distinct elements of a securities-fraud claim. In *Dura*, the Court held that a plaintiff does not adequately allege loss causation simply by alleging that he purchased stock at an inflated price due to a defendant's misrepresentation or omission. *Id.* at 342-346. The Court explained that an investor who buys stock at a price that is inflated due to the defendant's misstatement suffers no immediate loss because "the inflated purchase payment is offset by ownership of a share that *at that instant* possesses equivalent value." *Id.* at 342. While acknowledging the existence of a "logical link between the inflated share purchase price and any later economic loss," the Court characterized that connection as "not invariably strong" because the purchaser's subsequent sale of the shares at a lower price "may reflect, not the earlier misrepresentation, but changed economic circumstances, changed investor ex-

pectations, [or] new industry-specific or firm-specific facts, conditions, or other events." *Id.* at 343. Thus, even if *Basic* were properly read to require an inquiry into market distortion as part of the class-certification decision, there would be no warrant for extending that inquiry to the distinct issue of loss causation.

3. The *Basic* Court held that courts may rely on a rebuttable presumption of reliance supported by the fraud-on-the-market theory. 485 U.S. at 250. The Court explained that the prerequisites for invoking the presumption are satisfied if the alleged misrepresentations were made publicly, the stock was traded in an efficient market, and the plaintiffs traded between the time of the alleged misrepresentations and the time the defendant made corrective statements. *Id.* at 241-242, 247. Even when those prerequisites have been satisfied, a defendant may rebut the presumption through "[a]ny showing that severs the link between the alleged misrepresentation and * * * the price received (or paid) by the plaintiff." *Id.* at 248. Under *Basic*, however, the *defendant* bears the burden of rebutting the presumption of reliance. See *id.* at 248-249; *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 483 (2d Cir. 2008) (*Salomon*) (explaining that, "[u]nder *Basic*, * * * the burden of showing that there was no price impact is properly placed on defendants at the rebuttal stage"). Thus, even if an inquiry into actual market distortion were part of the class-certification inquiry, and even if market distortion and loss causation could properly be equated, there would be no warrant for the Fifth Circuit's requirement that the named plaintiff must prove loss causation at the class-certification stage.

D. The Circuits Are In Conflict Over The Question Presented, And This Case Is A Suitable Vehicle To Resolve That Disagreement

1. In its recent decision in *Schleicher*, the Seventh Circuit expressly rejected the Fifth Circuit's requirement that loss causation be proven at the class-certification stage. 618 F.3d at 685-687 (Easterbrook, J.). The court stated that, "unlike the fifth circuit, [the Seventh Cicuit] do[es] not understand *Basic* to license each court of appeals to set up its own criteria for certification of securities class actions or to 'tighten' Rule 23's requirements." *Id.* at 686. Instead, the court explained, whether a securities-fraud class should be certified depends solely on the requirements of Rule 23, and a court may review the merits only as necessary to make "decisions essential" under that Rule. *Id.* at 681, 685. In the court's view, any "potential for class certification to create pressure for settlement" is to be addressed by Congress, not the federal courts. *Id.* at 686.

The Seventh Circuit also rejected the view that a plaintiff in a private securities class action must show loss causation to rely on the fraud-on-the-market presumption of reliance. The court explained that, under *Basic*, courts may presume that "the price of a well-followed and frequently traded stock reflects the public information about a company." *Schleicher*, 618 F.3d at 682. To invoke the presumption of reliance, the Seventh Circuit explained, the plaintiff must simply show that the "company's stock trades in a large and efficient market." *Ibid.* The court stated that the separate question of loss causation need not be addressed at the class-certification stage because the determination whether and when the stock price was affected by fraud "can be made on a class-wide basis, because it affects investors in com-

mon." *Id.* at 687. To require proof of loss causation before a class is certified, the court stated, would "put the cart before the horse." *Ibid.* Characterizing the Fifth Circuit's approach as "a go-it-alone strategy," and noting that it "has not been adopted by any other circuit," the Seventh Circuit expressly "disappove[d]" that approach. *Ibid.*

2. The Second Circuit has taken an intermediate approach, allowing some consideration of the merits of a securities-fraud action at the class-certification stage (like the Fifth Circuit) but declining to consider loss causation at that stage (like the Seventh Circuit). In *Salomon*, the Second Circuit held that "plaintiffs do not bear the burden of showing an impact on price" from misrepresentations because the "point of *Basic* is that an effect on market price is presumed based on the materiality of the information and a well-developed market's ability to readily incorporate that information into the price of securities." 544 F.3d at 483. Although the court in *Salomon* did not expressly address the Fifth Circuit's approach, or expressly disavow consideration of loss causation at the class-certification stage, it stated that the prerequisites set out in *Basic* are "all that is needed to warrant the presumption" of reliance and that plaintiffs need not show at class certification that the alleged misrepresentations "moved the market." *Id.* at 481-482. The Second Circuit thus does not require plaintiffs to prove price distortion, let alone loss causation, at the class-certification stage.

The Second Circuit does, however, permit greater consideration of the merits at the class-certification stage than does the Seventh Circuit. Rather than limit a court's certification analysis to whether the stock traded in an efficient market and the alleged misrepre-

sentations were made publicly, the court in *Salomon* stated that a court considering a class-certification request may "take and weigh evidence on whether the presumption can be rebutted." 544 F.3d at 484. In particular, the court stated that class certification is inappropriate if the defendant can demonstrate "that the market price was not affected by the alleged misstatements." *Id.* at 485.[2]

The Second Circuit reached that conclusion because it read *Basic* to hold "that a successful rebuttal *defeats* certification by defeating the Rule 23(b)(3) predominance requirement." *Salomon*, 544 F.3d at 485.[3] In

---

[2] Respondents contend (Br. in Opp. 8-9) that by allowing defendants to rebut the fraud-on-the-market presumption of reliance, the Second Circuit allows consideration of loss causation at the class-certification stage. That contention confuses reliance with loss causation. When the Second Circuit stated that defendants could rebut the presumption of reliance by showing that "the misrepresentation in fact did not lead to a distortion of price," 544 F.3d at 483-484, the court was addressing price distortion caused by a misstatement, not the cause of a plaintiff's later loss.

[3] As support for that proposition, the court in *Salomon* cited footnote 29 of this Court's opinion in *Basic*. See 544 F.3d at 485. In that footnote, this Court acknowledged a potential "incongruity between the assumption that Basic shares are traded on a well-developed, efficient, and information-hungry market, and the allegation that such a market could remain misinformed, and its valuation of Basic shares depressed, for 14 months, on the basis of the three public statements." 485 U.S. at 249 n.29. The Court stated that "[p]roof of that sort is a matter for trial, throughout which the District Court retains the authority to amend the certification order as appropriate." *Ibid.* That analysis suggests that, if the evidence ultimately demonstrates that the distortive effect of a defendant's misstatements was cured as of a particular date, a class-certification order may be amended to exclude class members who purchased or sold shares after that date. Footnote 29 of the Court's opinion in *Basic* does not suggest, however, that a district court should make factual determinations regarding price distortion as part of its

Schleicher, by contrast, the Seventh Circuit rejected the defendants' contention that, "before certifying a class, a court must determine whether false statements materially affected the price." 618 F.3d at 685. The court explained that "[f]alsehood and materiality affect investors alike," and that "[i]t is possible to certify a class under Rule 23(b)(3) even though all statements turn out to have only trivial effects on stock prices. Certification is appropriate, but the class will lose on the merits." *Ibid.*

3. The question presented warrants this Court's consideration. This Court has characterized private securities-fraud actions as "an essential supplement to criminal prosecutions and civil enforcement actions," *Tellabs, Inc.*, 551 U.S. at 313, and has recognized that they "deter[] fraud" and "maintain public confidence in the marketplace," *Dura*, 544 U.S. at 345. These cases commonly proceed as class actions, and the lower courts regularly consider the prerequisites for class certification. See Pet. 15-17 (citing cases). And the impact of the Fifth Circuit's loss-causation rule is significant. As the Seventh Circuit observed in *Schleicher*, the Fifth Circuit's approach "make[s] certification impossible in many securities suits." 618 F.3d at 687.

This case provides an appropriate vehicle to resolve the existing circuit conflict. All agree that the question whether petitioner must prove loss causation to obtain class certification is dispositive in this case. The district court determined that the Rule 23 requirements for class certification had been met, and the court stated

---

initial class-certification inquiry. To the contrary, the Court's statement that "[p]roof of that sort is a matter for trial," *ibid.*, strongly indicates that such an inquiry is inappropriate at a threshold stage of the litigation. See pp. 14-16, *supra*.

that it would have certified the class but for Fifth Circuit precedents requiring proof of loss causation at this stage of the suit. Pet. App. 4a. And the lower courts' extensive analyses of loss causation on the merits (*id.* at 11a-54a, 123a-136a) provide a vivid example of the effect of requiring plaintiffs to prove loss causation at the class-certification stage. Accordingly, this Court's review is warranted.

CONCLUSION

The petition for a writ of certiorari should be granted.

Respectfully submitted.

08/26/2004 130 Minute Entry for proceedings held before Judge Barbara M. G. Lynn: Settlement Fairness Hearing held on 8/26/04. The Court heard from Counsel & Objections to the proposed settlement. The Court has taken the matter under advisement and an Order will follow. (Court Reporter Sue Engledow.) (nap,) (Entered: 09/02/2004)

08/30/2004 128 ORDER. The Court is in receipt of 2 separate documents from Neil D.

Espinet...directed to this Court and styled "Espinet v. Halliburton." The Court is returning these documents to Mr. Espinet and puts him on notice that these documents do not appear to be related to this case, but appear to reflect a desire to commence litigation. See order for specifics. (Signed by Judge Barbara M. G. Lynn on 8/30/04) (nap,) (Entered: 08/31/2004)

08/30/2004 129 REPLY in Support of 105 MOTION for leave to file complaint, for order continuing class member opt-out deadline and for permission to litigate class action filed by The Archdiocese of Milwaukee Supporting Fund, Inc. (nap,) (Entered: 08/31/2004)

08/31/2004 131 ORDER. The Court today received another document from Neil D. Espinet,...directed to this Court and styled Espinet v. Halliburton. The Court is again returning this document to Mr. Espinet and puts him on notice that this document does not appear to be related to this case, but appears to reflect a desire to commence litigation. See order for specifics. (Signed by Judge Barbara M. G. Lynn on 8/31/04) (nap,) (Entered: 09/02/2004)

09/07/2004 132 NOTICE of change of address by Thomas E Bilek. New address is: Hoeffner & Bilek, LLP, 1000 Louisiana St., Suite 1302, Houston, TX 77002. (aat,) (Entered: 09/08/2004)

See order for specifics. (Signed by Judge Barbara M. G. Lynn on 9/9/04) (nap,) (Entered: 09/10/2004)

09/09/2004 135 TRANSCRIPT of Proceeding held on August 26, 2004 Fairness Hearing before Judge Lynn. Court Reporter: Sue Engledow. (jmr) (Entered: 09/14/2004)

09/13/2004 134 NOTICE of Appearance of Additional Counsel by Rod Phelan, Robb L Voyles on behalf of Halliburton Company. (nap,) (Entered: 09/13/2004)

09/15/2004 136 EXPEDITED MOTION to Stay the Court's 133 Memorandum Opinion and Order, with Brief in Support by Douglas L Foshee, Halliburton Company, David J Lesar, Gary V Morris, R Charles Muchmore Jr. (nap,) (Entered: 09/16/2004)

09/15/2004 137 MOTION to Vacate the Court's 133 Memorandum Opinion and Order, with Brief in Support by Douglas L Foshee, Halliburton Company, David J Lesar, Gary V Morris, R Charles Muchmore Jr. (nap,) (Entered: 09/16/2004)

09/15/2004 138 Appendix in Support of 137 MOTION to Vacate 133 Memorandum Opinion and Order, filed by Douglas L Foshee, Halliburton Company, David J Lesar, Gary V Morris, R Charles Muchmore Jr. (Not imaged) (nap,) (Entered: 09/16/2004)

09/21/2004 139 ORDER. Before the Court are Dfts' 136 Expedited Motion to Stay and 137 Motion to Vacate, both filed on 9/15/04. Responses due by 9/27/2004. No Reply will be permitted. To enable careful consideration of the Motions, the deadlines listed in paragraphs one, two, and three of the Court's Memorandum Opinion and Order, dated 9/9/04 are extended by fourteen days. (Signed by Judge Barbara M. G. Lynn on 9/21/04) (nap,) (Entered: 09/21/2004)

09/23/2004 140 ORDER. It appears to the Court that the appointment of a guardian ad litem is necessary to represent the preliminary certified class members in this cause.

Judge Lawrence J. Irving is appointed to represent the preliminary certified class at a mediation to be held in this case. See order for specifics. (Signed by Judge Barbara M. G. Lynn on 9/23/04) (nap,) (Entered: 09/23/2004)

09/27/2004 141 ORDER. Given that a proposed settlement has not been approved as of this date, the requirement in paragraphs 57 and 58 of the Notice, that all class members who wish to receive any distribution from the Settlement Fund deliver a completed and signed Proof of Claim and Release by 9/27/04, is extended indefinitely, as provided for in paragraph 60 of the Notice. If appropriate, the Court will set a new deadline at a later date. See order for specifics. (Signed by Judge Barbara M. G. Lynn on 9/27/04) (nap,) (Entered: 09/27/2004)

09/27/2004 142 RESPONSE in Opposition to 137 MOTION to Vacate 133 Memorandum Opinion and Order, filed by The Archdiocese of Milwaukee Supporting Fund, Inc. (nap,) (Entered: 09/29/2004)

09/27/2004 143 Memorandum of Law in Opposition filed by The Archdiocese of Milwaukee Supporting Fund, Inc. (nap,) (Entered: 09/29/2004)

09/28/2004 144 ORDER. Pursuant to the Court's 9/23/04 order, Judge Lawrence J. Irving was appointed by the Court to serve as guardian ad litem. The Court feels it appropriate to further delineate Judge Irving's duties and responsibilities as guardian ad litem. Judge Irving is to "review the settlement from the point of view of members of the class and thereby to afford the class additional assurance that their interests will be adequately protected." See order for specifics. (Signed by Judge Barbara M. G. Lynn on 9/28/04) (nap,) (Entered: 09/30/2004)

09/28/2004 145 NOTICE of Intention to Participate in all Aspects of the Settlement Negotiations and Mediation Process and Demand for Production and Service of Documents by Patricia A Magruder. (lmr,) (Entered: 09/30/2004)

10/01/2004 146 MOTION to Modify 133 Memorandum Opinion and Order dated September 9, 2004 by The Archdiocese of Milwaukee Supporting Fund, Inc. (nap,) (Entered: 10/05/2004)

10/01/2004 147 Memorandum in Support re 146 MOTION to Modify Memorandum Opinion and Order dated September 9, 2004 filed by The Archdiocese of

Milwaukee Supporting Fund, Inc. (nap,) (Entered: 10/05/2004)

10/04/2004 148 ORDER denying 136 EXPEDITED MOTION to Stay, granting in part and denying in part 137 MOTION to Vacate. Dfts' Motion to Vacate is denied as to all portions of this Court's 9/9/04 Order except for paragraph 1. As to paragraph 1, the Motion to Vacate is granted, in light of the terms of a Confidentiality Agreement signed by the Settling Parties. Mediation of this case is to take place as previously ordered by this Court. The Court accepts the parties' recommendation and appoints Mr. Gary V. McGowan as mediator. See order for specifics. (Signed by Judge Barbara M. G. Lynn on 10/4/04) (nap,) (Entered: 10/05/2004)

10/07/2004 149 ORDER. The Court's 9/9/04 Memorandum Opinion and Order is modified to reflect the fact that Kilgore & Kilgore, P.L.L.C., is local counsel for Lead Plt Archdiocese of Milwaukee Supporting Fund, Inc. Kilgore & Kilgore is permitted to be present and participate in any and all activities in which Scott + Scott is allowed to participate. In addition, all parties shall note that the civil action number of this case is 3:02-cv-1152-M,

not 3:02-cv-1152-N. All future filings shall reflect the correct civil action number. (Signed by Judge Barbara M. G. Lynn on 10/7/04) (nap,) (Entered: 10/08/2004)

10/08/2004 150 MOTION with Brief in Support for Clarification of 148 10/4/04 Order by Halliburton Company, David J. Lesar, Gary V. Morris, Robert Charles Muchmore, Jr., and Douglas L. Foshee. (nap,) Modified on 10/12/2004 (nap,). (Entered: 10/12/2004)

10/12/2004 151 ORDER. The Claims Administrator, The Garden City Group, Inc., is directed to place the following message on the toll-free telephone number that was provided in the Notice to the Class Members: "The Court has ordered that the requirement that all class members who wish to receive a distribution from the Settlement Fund deliver a completed and signed Proof of Claim and Release by 9/27/04, be extended indefinitely, as provided for in paragraph 60 in the Notice. The Court Order also stated that if appropriate, the Court will set a new deadline at a later date. Due to this Order, we are not processing any claims forms at this time." Further, Lead Counsel may authorize payment of

		the $150,000 Notice and Administration Fund to The Garden City Group, Inc., in payment for a portion of the Notice and Administration costs it incurred in the administration of this matter. (Signed by Judge Barbara M. G. Lynn on 10/12/04) (nap,) (Entered: 10/13/2004)
10/14/2004	152	ORDER granting 150 Motion for Clarification of 10/4/04 Order. As stated in the Court's 9/9/04 Order, all activities in the case are stayed through 12/3/04, except the specific activities authorized by the Court. The Court has not authorized the filing of motions to dismiss; therefore, no motion to dismiss may be filed during the pendency of the stay. (Signed by Judge Barbara M. G. Lynn on 10/14/04) (nap,) (Entered: 10/18/2004)
10/15/2004		Mail Returned as Undeliverable. 148 Order on Motion to Stay and Motion to Vacate received back from Craig M. Walker as not deliverable as addressed. (nap,) (Entered: 10/19/2004)
10/18/2004		Mail Returned as Undeliverable. 149 Order received back from Craig M. Walker as not deliverable as addressed. (nap,) (Entered: 10/19/2004)

10/26/2004 153 AGREED MOTION to Extend Time for Halliburton Co., AMS Fund, Inc., and Patricia Magruder's Respective Counsel to Meet Pursuant to 9/9/04 Memorandum Opinion and Order by Halliburton Company, Patricia A Magruder, The Archdiocese of Milwaukee Supporting Fund, Inc. (nap,) (Entered: 10/28/2004)

10/28/2004 154 ORDER granting 153 AGREED MOTION to Extend Time for Halliburton Co., AMS Fund, Inc., and Patricia Magruder's Respective Counsel to Meet Pursuant to 9/9/04 Memorandum Opinion and Order. Counsel for parties have until and including 10/28/04, to meet pursuant to the Court's 9/9/04 and 9/21/04. (Signed by Judge Barbara M. G. Lynn on 10/28/04) (nap,) (Entered: 10/29/2004)

11/04/2004 155 ORDER. This case is stayed until 3/7/05 for all activities but those previously authorized by the Court's 9/9/04 Order as modified by the Court's 10/4/04 Order. The mediation deadline stated in paragraph 3 of the 9/9/04 order is now 1/28/05, and the mediation before the court appointed mediator, Gary McGowan, is ordered to take place on January 27-28, 2005. The deadline...to notify the Court as to whether a new

proposed settlement has been reached is now 2/28/05. The date when the Court will consider modifying appointment of Lead Plaintiffs and Lead Counsel... is now 3/7/05. See order for specifics. (Signed by Judge Barbara M. G. Lynn on 11/4/04) (nap,) (Entered: 11/05/2004)

Master Docket No. 3:02-CV-1152-M

CLASS ACTION

THE ARCHDIOCESE OF MILWAUKEE SUPPORTING FUND, INC., et al., On Behalf of itself and All Others Similarly Situated,

Lead Plaintiff,

vs.

HALLIBURTON COMPANY, et al.,

Defendants.

This Document Relates to:
ALL ACTIONS.

LEAD PLAINTIFF'S MOTION FOR CLASS CERTIFICATIONAND INCORPORATED MEMORANDUM OF POINTS AND AUTHORITIES IN SUPPORT THEREOF

[TABLES INTENTIONALLY OMITTED]

Appendix B

INTRODUCTION

This is a securities class action brought on behalf of persons who purchased the common stock of Halliburton Company ("Halliburton" or the "Company") between June 3, 1999, through and including December 7, 2001, (the "Class Period"), against Halliburton and David J. Lesar, (collectively, "Defendants" or "Halliburton"). Lead Plaintiff, the Archdiocese of Milwaukee Supporting Fund, Inc. ("AMS Fund") seeks an order under Fed. R. Civ. P. 23(a) and 23(b)(3) certifying a plaintiff class of all persons and entities who purchased or otherwise acquired Halliburton's common stock during the Class Period. The Lead Plaintiff AMS Fund requests that it be appointed a Class Representative and that another injured party, Lt. Col. Ben Alan Murphey, who filed a complaint and timely objected to a previous settlement that was found to be inadequate, also be named as a Class Representative. While the AMS Fund is adequate to serve as the sole Class Representative, it believes that the Class will benefit from Mr. Murphey serving as well. Finally, Lead Plaintiff requests that current Lead Counsel, Boies, Schiller & Flexner LLP, ("Boies Schiller" or "Lead Counsel") be designated as Class Counsel.

The Fourth Consolidated Amended Complaint for violation of the federal securities laws (the "FCAC") alleges that during the Class Period, Defendants violated §§10(b) and 20(a) of the Securities Exchange Act of 1934, 15 U.S.C. § 78a *et seq.*, by deliberately falsifying Halliburton's financial results and deliberately and/or recklessly misleading the public about the financial

condition and success of Halliburton's business, including its construction operations, the benefits of its acquisition of Dresser, Inc., its exposure to asbestos liability and its future business and financial prospects. ¶¶ 2, 4-44[1]. Such securities fraud class actions are routinely certified by the courts of the Fifth Circuit. *In re Electronic Data Sys. Corp. Sec. Litig.*, 226 F.R.D. 559 (E.D. Tex. 2005); *In re Reliant Sec. Litig.*, No. H-02-1810, 2005 U.S. Dist. LEXIS 9716 (S.D. Tex. Feb. 18, 2005).[2] As is the case here, each of the foregoing certified cases involved false and misleading statements and/or omissions of material facts which caused investors to purchase stock at inflated prices during the Class Period. In those cases, as it should be here, a Class was certified despite the fact that investors purchased different amounts of stock on different days during the Class Period.

The primary issue for class certification in a securities case like this is whether there is a basis for a claim of loss causation. *Oscar Private Equity Investment v. Allegiance*, 487 F.3d 261 (5th Cir. 2007). In this case, the facts alleged, along with the Report of Jane D. Nettesheim, Appendix at 001 - 557 ("Nettesheim" and the "Report"), establish, among other things:

---

1. Unless otherwise indicated, all paragraph ("¶") references are to the FCAC.

2. See also *In re Dynegy, Inc. Sec. Litig.*, 226 F.R.D. 263 (S.D. Tex. 2004); *Lehocky v. Tidel Techs., Inc.*, 220 F.R.D. 491 (S.D. Tex. 2004); *In re Firstplus Fin. Group, Inc. Sec. Litig.*, Civ. Action No. 3:98-CV-2551-M, 2002 U.S. Dist. LEXIS 20446 (N.D. Tex. Oct. 23, 2002).

- On October 24, 2000, the Company announced that it would be restructuring its construction units. As alleged in the FCAC, the restructuring was necessitated due to the problems with the Dresser integration. FCAC ¶ 144. This partial disclosure caused Halliburton's stock price to decline from $41.63 to $37.06, a statistically significant decline. Report at ¶ 93.

- On December 21, 2000, Halliburton pre-announced its fourth quarter earnings and announced that it would be taking $120 million after tax charge, $95 million of which was required to write-off previously undisclosed losses on fixed price construction contracts. FCAC ¶ 150. This partial disclosure caused Halliburton's stock price to decline from $37.00 to $36.00, a statistically significant decline. Report at ¶ 106.

- On June 28, 2001, Halliburton disclosed, for the first time, that Harbison, a former Dresser subsidiary, had asked for financial assistance for asbestos claims. FCAC ¶ 170-171. This partial disclosure regarding Halliburton's potential asbestos liability caused Halliburton's stock price to decline from $37.17 to $35.60, a statistically significant decline. Report at ¶ 115-116.

- On December 4-7, 2001, Halliburton disclosed information regarding recent adverse asbestos verdicts, making clear that the Company's existing $125 million in asbestos reserves were not, as previously represented, adequate. FCAC ¶ 191. This disclosure caused the price of Halliburton stock to decline, on

December 7, 2001 alone, from $20.85 to $12.00, a statistically significant decline. Report at ¶ 133.

SUMMARY OF CLAIMS

The key facts are set forth in the FCAC. Briefly summarized below, the FCAC alleges a series of false and misleading statements relating, among other things, to Halliburton's accounting practices with respect to 1) its improper booking of unapproved claims as revenue; 2) its knowingly inadequate reserves for asbestos liability; and, 3) its severe but undisclosed problems associated with the acquisition and integration of Dresser.

Accounting for Unapproved Claims

Prior to mid-1997, the business unit Brown Root Energy Services ("BRES") and the reporting segment Engineering and Construction ("E&C") principally entered into cost-plus or segmented fix fee contracts. In the 1997 Annual Report, Halliburton stated that "the keys to increasing revenue and improving profit margins . . . will be . . . acceptance of more . . . fixed price contracts." ¶ 68. Far from leading to improved revenue and profit margins, the fixed-price contracts accepted by the Company resulted in cost overruns and delays, and customers' refusal to pay millions in unapproved claims. ¶ 10.

Prior to the second fiscal quarter of 1998, as disclosed in public statements and filings with the Securities and Exchange Commission ("SEC"), Halliburton did not

report unapproved claims as revenue until the claim was resolved. ¶ 69. However, in second quarter 1998 the Company began to record unapproved claims as revenue even if customers had not agreed to pay and were not legally obligated to do so. ¶ 11. Under the new, undisclosed accounting policy, Halliburton's losses on these contracts appeared as revenue and falsely inflated Halliburton's reported operating incomes and margins and overall financial health. ¶¶ 11-14, 204-236. FCAC ¶¶ 11-72, 210-219.

Knowing the change in accounting for unapproved claims falsely represented the Company's revenue, profit and financial health, Halliburton nevertheless continued to claim success on these large fixed-price contracts. On July 22, 1998, Halliburton reported that the "Engineering and Construction Group business segments second quarter, 1998, operating income increased 66 percent . . . operating margin for the segment improved to 6.5 percent compared to last year's 3.9 percent . . .." ¶ 80. Similar claims of financial success were made when Halliburton issued a release reporting its third quarter, 1998 results on October 29, 1998, stating that "[d]espite weaker market conditions, the . . . construction activities of Brown & Root Energy Services registered higher revenues for the quarter." ¶ 86. In fact, the higher revenues were not due to improved operations, but were the result of the change in accounting for unapproved claims.

Despite Halliburton's claims of success, in connection with its year-end 1998 results, Halliburton was forced to take a $60 million charge for unapproved claims. While announcing the charge, the Company assured analyst

that the charge was not necessitated by the premature booking of unapproved claims as revenue, but rather was required because of customers' change of attitude about paying unapproved claims. ¶ 90. The Company further reiterated that it would not accept or perform change orders unless the customer agreed in advance to pay for the extra work, thereby indicating that it would continue its practice of not booking revenue on unapproved claims until the claim was resolved. This statement was false and misleading because Halliburton had in fact changed its accounting practice, and further, the statement indicated the problem resulting in the $60 million charge, had been addressed, and therefore, there would be no such future charges.

Thereafter, on June 9, 1999, Richard B. Cheney ("Cheney") and Gary V. Morris ("Morris") made a joint presentation at the 12th Annual Paine Webber Energy Conference. On behalf of the Company, Cheney and Morris explained that "Hal has adjusted to the change in customer philosophy" and requires that customers provide "assurance of payment . . . along the way . . ."; and, restated management's "confidence in downstream margins going forward." ¶ 91. These statements were relied upon and repeated in subsequent analyst reports. ¶¶ 92-93.

By including the unapproved claims in the Company's reported revenue, profit and margins were more favorable than they would have been if the accounting policy had not been changed. The Company invoked these overstated numbers to perpetuate the perception of success, and boasted the year-over-year improvements in revenue

but failed to disclose that the improved financials were the result of the accounting change, not of improved operations.

It was not until March, 2000, in Halliburton's 1999 Annual Report, that the Company slipped a sentence into the notes to its financial statements that it was now recognizing revenue on unapproved claims when it deemed collection "probable." ¶ 124. However, this belated disclosure was still misleading because it did not disclose that the Company had already, over the prior six quarters, secretly and improperly recognized at least tens of millions in unapproved claims as revenue, even though they were unlikely to be collected and could not be accurately estimated, two strict requirements under Generally Accepted Accounting Principles ("GAAP") for recognizing Unapproved Claims as revenue. ¶¶ 13-14, 204-209. Moreover, Halliburton continued the practice of comparing the inflated post-change financial results to the pre-change financial results, without disclosing the inflating effects of the new accounting method.

In public statements and filings with the SEC subsequent to its 1999 Annual Report, Halliburton repeated that its accounting practice was not to book revenue on unapproved claims until it deemed collection was probable. Each of these statements however was false and misleading because Halliburton continued to improperly record millions in uncollectible and inestimable Unapproved Claims as revenue every quarter. ¶¶ 11-14, 204-209, 234-236.

Appendix B

Asbestos Liability

Halliburton also repeatedly assured investors that the resolution of Dresser's legacy of asbestos suits would not have a material impact on Halliburton's finances. Halliburton's 1998 Annual Report assured investors that the $12 million then reserved was adequate, and "that the pending asbestos claims will be resolved without a material effect on Halliburton's financial position or results of operations." ¶ 101. While over time the Company made slight increases to the actual amount of reserves, Halliburton continued throughout the Class Period to falsely represent that it had adequately reserved for potential asbestos liability. For example, on November 15, 1999, Halliburton filed its third quarter, 1999 10Q, which stated that reserves had been increased to $13 million, and assured investors that $13 million asbestos reserves were adequate.

Similarly, on May 15, 2000, Halliburton filed its first quarter, 2000 10Q. Regarding Halliburton's potential asbestos litigation, the Company announced that it had accrued $25 million, and that management believed that pending asbestos claims would be resolved without material effect on Halliburton's financial position. As detailed in the FCAC, such unequivocal assurances were repeated in every SEC filing through May, 2001[3]. ¶¶ 88,

---

3. Halliburton increased its accrual for asbestos by just $2 million in 3rd Q 00, $3 million in 4th Q 00 and $1 million in lst Q 01, resulting in accrued liabilities at March 31, 2001 of only $30 million while assuring analysts that Halliburton had "fully accrued" for all asbestos liabilities. ¶ 35.

101, 113, 126, 130, 148, 160, 166. In fact, as the Company knew, or was severely reckless in not knowing, Halliburton had potential liability of hundreds of millions of dollars, and was in litigation with various insurance carriers who were denying coverage.

Integration of Dresser Operations

In early 1998, Halliburton announced the $7 billion Dresser acquisition, assuring investors it was a "win," which would strengthen Halliburton's balance sheet and boost its "bottom-line" because Halliburton and Dresser were "an outstanding business and cultural fit." ¶ 8. Halliburton told investors the merger would result in the "strengthening [of Halliburton's] balance sheet," "lower costs" and "very significant savings . . . in excess of $1/4 billion" per year, *i.e.*, the "combination will be especially effective." ¶ 15. Thereafter, on September 13, 1999, Lesar told analysts and money managers at an energy conference that the Dresser merger would bring a $500 million annual benefit to the Company, up from the $250 million annual benefit the Company had previously stated would result from the acquisition. ¶ 115.

Halliburton continued to represent that the integration had been successful and would confer substantial benefits to Halliburton's home line. For example, Halliburton's 1999 Annual Report assured investors that "[t]he merger with Dresser Industries is now behind us. Integrating the operations of the two companies . . . [has] been an important part of our transition to the future . . . . The potential rewards to our shareholders are vast." ¶ 21, 122.

According to Cheney, Halliburton's stock was "one of the best investment opportunities." ¶¶ 21-22.

These positive but false statements inflated Halliburton's stock price to $52 by the Spring of 2000. *Id.* In fact, however, throughout the Class Period, there were ongoing and persistent problems with the integration of Dresser, costing the Company at least tens if not hundreds of millions of dollars.

PROPOSED CLASS REPRESENTATIVES

Lead Plaintiff AMS Fund proposes that it, along with Ben Alan Murphey, serve as Class Representatives. During the Class Period, Lead Plaintiff and proposed Class Representative AMS Fund purchased shares of Halliburton stock and, as of the end of the Class Period, suffered damages of approximately $71,000 as a result of Defendants' material misrepresentations and omissions. ¶ 54(a). AMS Fund, a charitable institution, has already expended substantial time and effort, and amply demonstrated its commitment to vigorously prosecute this litigation on behalf of the proposed Class. The AMS Fund has ably represented the Class by overseeing and communicating with appointed Lead Counsel, and keeping apprised of the ongoing developments in the case. Lead Plaintiff has undertaken an extensive investigation into Defendants' fraudulent schemes, and when former lead counsel sought approval of an inadequate settlement, AMS Fund, joined by proposed Class Representative Ben Alan Murphey, objected to, and defeated that settlement.

Appendix B

During the Class Period, proposed Class Representative Ben Alan Murphey purchased shares of Halliburton stock, and, as of the end of the Class Period, suffered damages of approximately $11,000 as a result of Defendants' material misrepresentations and omissions. ¶ 54(f). Mr. Murphey filed his class action complaint in this action on March 9, 2005. Mr. Murphey has actively monitored this action through his communications with Special Counsel Neil Rothstein, and when former lead counsel sought approval of the inadequate settlement, Mr. Murphey joined in the AMS Fund in objecting to that settlement.

Mr. Murphey and AMS Fund stand ready, willing and able to perform the duties of a Class Representative, including testifying at depositions and responding to discovery requests.

ARGUMENT

A. Legal Standards for Class Certification Pursuant to Fed. R. Civ. Proc. 23

The party seeking certification bears the burden of proof and must demonstrate that the proposed class and its representative(s) satisfy the requirements of Rule 23(a) and one of the requirements of Rule 23(b). *Berger v. Compaq Computer Corp.*, 257 F.3d 475, 479 (5th Cir. 2001), *clarified on rehearing en banc*, 279 F.3d 313 (5th Cir. 2002). Here Lead Plaintiff moves for certification under Rule 23(b)(3), in that "questions of law or fact common to the members of the class predominate over any questions affecting only

individual members, and that a class action is superior to other available methods for the fair and efficient adjudication of the controversy." Fed. R. Civ. P. 23(b)(3).

On a motion for class certification "the question is not whether the plaintiff or plaintiffs have stated a cause of action or will prevail on the merits, but rather whether the requirements of Rule 23 are met." *Eisen v. Carlisle & Jacquelin*, 94 S. Ct. 2140, 2153 (1974); *accord Bell v. Ascendant Solutions, Inc.*, 422 F.3d 307, 311 (5th Cir. 2005) *citing Castano v. American Tobacco Co.*, 84 F.3d 734, 744 (5th Cir. 1996) ("the strength of a plaintiff's claim should not affect the certification decision."). While the Fifth Circuit's recent opinion in *Oscar Private Equity Investment v. Allegiance*, 487 F.3d 261 (5th Cir. 2007) requires a showing of loss causation in order for a Lead Plaintiff to avail upon a fraud-on-the-market presumption of reliance, under *Allegiance* the inquiry is whether Plaintiff had offered "some empirically-based showing that the corrective disclosure was more than just present at the scene." *Id.* at 271.

A class action affords a single forum in which to litigate the same or similar claims, and affords an indispensable mechanism to conserve judicial resources. The Supreme Court, as well as courts throughout the country, have endorsed class actions in securities fraud claims. *Califano v. Yamasaki*, 442 U.S. 682, 701 (1979); *see, e.g., Phillips Petroleum Co. v. Shutts*, 472 U.S. 797, 809 (1985) ("most of the plaintiffs would have no realistic day in court if a class action were not available."). A district court has great discretion in deciding whether certification is proper. *Vizena v. Union Pacific R. R. Co.*, 360 F.3d 496, 502 (5th Cir. 2004).

Appendix B

This case has all the elements of a certifiable, securities class action. The proposed Class is defined as all purchasers of Halliburton common stock during the Class Period, excluding defendants, officers and directors of the Company, as well as their families.[4] The Class consists of tens, if not hundreds of thousands of investors who acquired Halliburton's stock over a 31-month period and were damaged by the same fraudulent schemes and false and misleading statements and omissions of material facts. Accordingly, as demonstrated below, certification is appropriate.

---

4. In accordance with Local Rule 23.2, counsel provides the following additional information: Plaintiffs' counsel has agreed to advance the money to fund this action. Counsel anticipates providing notice to all class members for whom they are able to obtain a valid address by U.S. mail, and supplementing that notice with publication notice in a national newspaper such as the Wall Street Journal. As part of the Stipulation and Agreement of Settlement, filed on May 10, 2004, initial Lead Counsel estimated that the cost of such a notice program would be $150,000. Lead counsel believes that figure is a rough approximation of the cost of a notice program, and is in the process of trying to gather the information needed for a more precise estimate. Plaintiffs' counsel has been retained in this action on a contingency basis and should plaintiffs prevail in this action, counsel is entitled both to payment of attorneys fees and to reimbursement of advanced costs. Plaintiffs do not believe any discovery is necessary for the class certification hearing other than deposition of expert witnesses unless defendants raise factual defenses to class certification. Counsel believes the depositions can be conducted within a few weeks of service of all relevant expert reports.

B. The Proposed Class Satisfies the Requirements of Rule 23(a)

Rule 23(a) sets forth four prerequisites for class certification: (1) The Class is so numerous that joinder of all members is impracticable; (2) there are questions of law or fact common to the Class; (3) the claims or defenses of the representative parties are typical of the claims or defenses of the Class; and, (4) the representative parties will fairly and adequately protect the interests of the Class. Fed. R. Civ. P. 23(a). The requirements of Fed. R. Civ. P. 23(a) are commonly referred to as the "numerosity," "commonality," "typicality," and "adequacy", respectively. *See Ortiz v. Fibreboard Corp.*, 527 U.S. 815 (1999).

1. Numerosity

Numerosity is satisfied when a potential Class is so numerous that joinder of all members is impracticable. *Watson v. Shell Oil Co.*, 979 F.2d 1014, 1022 (5th Cir. 1992). Because a reasonable estimate of the number of purported members satisfies the numerosity requirement, a precise numeration is not required. *Henry v. Cash Today, Inc.*, 199 F.R.D. 566, 569 (S.D. Tex. 2000) (Harmon, J.). In the Fifth Circuit, "the prerequisite expressed in Rule 23(a)(1) is generally assumed to have been met in class action suits involving nationally traded securities." *Zeidman v. J. Ray McDermott & Co., Inc.*, 651 F.2d 1030, 1039 (5th Cir. 1981).

The Class consists of those who purchased Halliburton's publicly traded securities during the Class Period. At the start of the Class Period, Halliburton had approximately

440.6 million shares outstanding, with members of the Class scattered throughout the United States. *See* Report ¶ 22. While the exact number of class members is presently unknown, and can be ascertained only through discovery, based on the Company's reported shares outstanding and trading volume during the Class Period, Lead Plaintiff estimates there are tens, if not hundreds of thousands of class members nationwide.

2. Commonality

To satisfy the commonality requirement, Lead Plaintiff must show that there are questions of law or fact common to the class. The "commonality" requirement is satisfied "when there is at least one issue, the resolution of which will affect all or a significant number of the putative class members." *Lightbourn v. County of El Paso,* 118 F.3d 421, 426 (5th Cir. 1997). Rule 23(a)(2) does not require perfect harmony throughout the class and the presence of some factual variations among class members' experiences will not defeat class certification. *In re Reliant,* 2005 U.S. Dist. LEXIS 9716, at *20. That some plaintiffs have different claims or claims that require some individualized analysis does not defeat commonality. *James v. City of Dallas,* 254 F.3d. 551, 570 (5th Cir. 2001).

This proposed Class satisfies the "commonality" requirement. At least the following issues of law and fact are common to the proposed Class Representatives and the Class:

(i) whether Defendants violated federal securities laws;

(ii) whether Defendants' undisclosed schemes, false statements and omissions of material facts misrepresented the business, financial and operational results and future performance of the Company;

(iii) whether Defendants acted willfully, knowingly, or recklessly in concealing their schemes and misrepresenting and omitting material facts;

(iv) whether the market price of the Company's common stock was artificially inflated during the Class Period due to Defendants' schemes, material misrepresentations, deceptions and nondisclosures; and

(v) whether class members sustained economic loss causally connected to Defendants' misconduct, and if so, the proper measure of such damages.

In addition, all Class members were damaged by Defendants' "standardized conduct" during the Class Period. *Keele v. Wexler,* 149 F.3d 589, 594 (7th Cir. 1998). Defendants' fraudulent accounting schemes, and false and misleading statements and omissions to the market inflated the Company's stock price and injured class members in a uniform manner. ¶¶ 18-126. The proposed Class Representatives, like all members of the Class, purchased Halliburton shares based on the integrity of the market when defendants' misconduct inflated Halliburton's stock price. This common nucleus of facts

and law unite all class members, irrespective of when and how many shares they purchased. Nothing more is required to show commonality under Rule 23(a)(2). *In re Reliant*, 2005 U.S. Dist. LEXIS 9716, at *20.

3. Typicality

"The test for typicality, like the test for commonality, is not demanding." *Lightbourn*, 118 F.3d at 426. "The court focuses on the legal and remedial theories of the named plaintiffs and the class members they seek to represent." *Henry*, 199 F.R.D. at 569. Typicality does not require that all claims must be identical. *Phillips v. Joint Legislative Comm. on Performance & Expenditure Review*, 637 F.2d 1014, 1024 (5th Cir. 1981). "The proper inquiry is whether other members of the class have the same or similar injury, whether the action is based on conduct not special or unique to the named plaintiffs, and whether other class members have been injured by the same course of conduct." *Longden v. Sunderman*, 123 F.R.D. 547, 556 (N.D. Tex. 1988).

The claims of the proposed Class Representatives are typical of those of the class members. Defendants' common schemes and "standardized" course of wrongful conduct caused damage to class members who purchased shares at artificially inflated prices during the Class Period. The proposed Class Representatives, like all other class members, suffered economic losses from their transactions in Halliburton's stock when the artificial inflation was removed from the stock price through, *inter alia*, partial disclosures of adverse facts concerning the true financial state of the Company. ¶ 3. Simply put, the

proposed Class Representatives' claims are typical under Rule 23(a)(3) because "the claims of named and unnamed plaintiffs have a common source and rest upon the same legal and remedial theories." *In re Reliant*, 2005 U.S. Dist. LEXIS 9716, at *22 (*citing Lehocky*, 220 F.R.D. at 500).

4. **Adequacy**

"The Court must find that class representatives, their counsel, and the relationship between the two are adequate to protect the interests of absent class members." *Unger v. Amedisys Inc.*, 401 F.3d 316, 321 (5th Cir. 2005). The adequacy requirement has three elements: (1) the chosen Class Representative cannot have antagonistic or conflicting claims with other members of the class; (2) the named representative must have sufficient interest in the outcome to ensure vigorous advocacy; and (3) designated counsel must be competent, experienced, qualified, and generally able to conduct the proposed litigation vigorously. *Berger v. Compaq Computer Corp.*, 257 F.3d at 479-80. The proposed Class Representatives satisfy the "adequacy" requirements of Rule 23(a)(4).

There are no conflicts of interest between the proposed Class Representatives and the other members of the Class. The proposed Class Representatives will have to prove the same legal theory and standardized conduct as the absent class members to establish Defendants' liability. Further, there are no defenses unique to the proposed Class Representatives. Differences between the Class Representatives and the class members do not defeat adequacy unless these differences create conflicts

between the representatives and the class members. *James v. City of Dallas*, 254 F.3d 551, 570 (5th Cir. 2001). Here there is no such conflict.

An adequate representative must be willing to take an active role in and exercise ultimate control of the litigation in order to protect the interests of the absent class members. *Berger v Compaq Comp. Corp.*, 257 F.3d at 479. The proposed Class Representatives have demonstrated their interest and vigor by actively prosecuting this case. When the initial lead counsel proposed an inadequate settlement, the proposed Class Representatives joined in objecting to, and ultimately defeating, the settlement. Mr. Murphey has continued to monitor the case through consultation with Special Counsel Neil Rothstein.

Finally, the proposed Class Representatives have retained attorneys with considerable experience in complex litigation and securities class actions. The proposed Class is represented by Boies, Schiller & Flexner LLP, whose attorneys have been appointed as Class Counsel in numerous class actions, including securities class actions.[5] The firm resume of Boies, Schiller & Flexner LLP evidences its ability to vigorously prosecute this action with the guidance and assistance of the proposed Class Representatives. *See App.* at 558 - 586.

---

5. On February 23, 2007, this Court approved Lead Plaintiff's selection of Boies, Schiller & Flexner LLP ("Boies Schiller") as Lead Counsel.

C. This Action Satisfies Rule 23(b)(3)

In addition to satisfying the requirements of Rule 23(a), the proposed Class Representatives must also meet the requirements of Rule 23(b)(2) or (3). Lead Plaintiff seeks certification under Rule 23(b)(3), which states that an action may be maintained as a class action if:

> [T]he court finds that the questions of law or fact common to the members of the class predominate over any questions affecting only individual members, and that a class action is superior to other available methods for the fair and efficient adjudication of the controversy.

Id. The proposed Class satisfies both the predominance and superiority requirements.

1. Common Questions of Law or Fact Predominate

To satisfy the predominance requirement, Lead Plaintiff must establish that issues that are subject to generalized proof, and thus applicable to the Class as a whole, predominate over issues that are subject only to individualized proof. *See Alison v. Citgo Petroleum Corp.*, 151 F.3d 402, 419-420, 425 (5th Cir. 1998). Rule 23(b)(3)'s predominance requirement is "more stringent" than the commonality requirement of Rule 23(a) but, in analyzing predominance, courts generally focus on liability, therefore "predominance is a test readily met in certain cases alleging consumer or securities fraud or antitrust violations." *Amchem Prods., Inc. v. Windsor*, 521 U.S. 591, 625 (1997).

Appendix B

Common issues, including those identified in section B.2. above, predominate in this action. Defendants' liability arises from their fraudulent accounting schemes and dissemination of materially false and misleading statements and omissions during the Class Period. *See In re Bank One Sec. Litig.*, No. 00 CV 0767, 2002 U.S. Dist. LEXIS 8709, at *22 (N.D. Ill. May 9, 2002) ("The issues of law and fact that flow from Defendants' alleged misstatements and omissions predominate over any individual issue."). Each member of the Class purchased Halliburton stock at prices artificially inflated as a result of Defendants dissemination of false and misleading statements and, because the same set of operative facts and the same issues of proximate cause apply to each class member, common questions of law and fact predominate and a class action is appropriate. *Durrett v. John Deere Co.*, 150 F.R.D. 555, 560 (N.D. Tex. 1993). Indeed, the only possible individual issues in this case are reliance and damages, the latter of which courts uniformly hold, absent a conflict that is imminent and "at the very heart of the suit", will not defeat class certification in securities cases. *Kalodner v. Michaels Stores, Inc.*, 172 F.R. D. 200 (N.D. Tex. 2007) (internal citations omitted).

2. The Issue of Reliance Will Not Defeat Certification

Lead Plaintiff relies on the fraud-on-the-market theory recognized in *Basic Inc. v. Levinson*, 485 U.S. 224 (1988) for of a class-wide presumption of reliance. The fraud-on-the-market presumption provides that:

Appendix B

> An investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price. Because most publicly available information is reflected in market price, an investor's reliance on any public material misrepresentations, therefore, may be presumed for purposes of a Rule 10b-5 action.

Id. at 247.

Under the Fifth Circuit's recent interpretation of *Basic*, in order to avail upon the fraud-on-the-market presumption, plaintiffs must show that Halliburton stock traded on an efficient market and that the corrective disclosure affected the stock price. *Oscar Private Equity Investments v. Allegiance*, 487 F.3d 261. The *Allegiance* court made clear however, that plaintiffs need not quantify damages, or prove that some percentage of the drop was attributable to the corrective disclosure, but need only offer some empirically based showing that "the corrective disclosure was more than just present on the scene." *Id.* at 271. Once the proposed Class establishes entitlement to the fraud-on-the-market presumption of reliance, Defendants can rebut that presumption only "by showing that the nondisclosures did not" affect the Halliburton's stock price. *Fine v Am. Solar King Corp.*, 919 F.2d 290, 299 (5th Cir. 1990).

Appendix B

a. Halliburton's Common Stock Traded in an Efficient Market

The court in *Unger v Amedisys*, 401 F.3d 316 (5th Cir. 2005), expanding upon the five factors recognized by *Cammer v. Bloom*, 711 F. Supp. 1276 (D.N.J. 1989), identified eight factors for determining market efficiency: (1) average weekly trading volume expressed as a percentage of total outstanding shares; (2) number of securities analysts following and reporting on the stock; (3) extent to which market makers and arbitrageurs trade in the stock; (4) Company's eligibility to file SEC registration Form S-3 (as opposed to Form S- or S-2); (5) existence of empirical facts "showing a cause and effect relationship between unexpected corporate events or financial releases and an immediate response in the stock price;" (6) Company's market capitalization; (7) bid-ask spread for stock sales; and (8) float, the stock's trading volume without counting insider-owned stock. *See also, Bell*, 422 F.3d at 313. Under each of these factors it is clear that the market for Halliburton stock was efficient. Report, ¶¶ 9-24.

Factor 1: Trading Volume

Halliburton's stock traded at an average weekly volume of over 16,796,502 shares during the Class Period. Report, ¶ 22. Weekly trading volume for Halliburton was on average, 3.8% of the outstanding shares, significantly more than the 2% volume courts have found sufficient to raise a "strong presumption" of market efficiency for stocks traded on the NASDAQ, and more than the 1% volume courts have deemed sufficient for stocks traded on the NYSE. Report, ¶ 21, fn.16.

Appendix B

Factor 2: Analyst Coverage

Securities analysts from several firms covered and reported on Halliburton during the Class Period.[6] Such expansive analyst coverage is an indicator of market efficiency. Report, ¶ 27.

Factor 3: Opportunity for Arbitrage

For stocks traded on the NYSE, the function of market makers – that is, to ensure the competitive, orderly and efficient market for securities, is performed by a single specialist. Report, ¶ 28. Specialists achieve this function by performing four critical roles: (1) as an auctioneer, continually showing the best bids and offers, and maintaining order in the crowd; (2) as an agent for SuperDot orders (direct electronic routing system to and from the trading floor) as well as for brokers; (3) as a catalyst for order flow by informing interested parties of items available in the market; and (4) as a principal, where the specialist has an obligation to enter into a transaction

---

6. Halliburton was covered by at least ABN Amro Bank N.V. U.S.A; A.G. Edwards & Sons, Inc.; Argus Research Corporation; Bear, Stearns & Co., Inc.; Brown Brothers Harriman & Co.; Capital One Southcoast, Inc; CIBC World Markets Corp.; Deutsche Bank Securities Inc.; ING Financial Markets USA; Jefferies & Company, Inc.; Johnson, Rice & Co.; Painewebber Inc.; PNC Institutional Investment Service; Prudential Equity Group, Inc.; RBC Capital Markets; Sanford C. Bernstein & Co., Inc.; Smith Barney Citigroup; Southwest Securities; Stephens Inc.; SunTrust Robinson Humphrey Capital Markets; UBS (US); and Wachovia Securities.

using its own capital if there is a willing buyer or seller with no counterparty in the marketplace. Specialists thus facilitate continuous trading during market hours. Report, ¶ 29. As with the market makers, the role of the specialist assures the existence of arbitrage opportunities. Report, ¶ 31. As evidenced by the level of short interest, the short-selling of Halliburton's stock was not constrained during the Class Period, and arbitrage opportunities could be exploited, which is evidence in support of market efficiency. Report, ¶¶ 32-37.

Factor 4: Form S-3 Eligibility

The Company was eligible to file an SEC registration Form S-3 during the Class Period. Indeed, Halliburton filed an amended Form S-3 before the Class Period, on September 25, 1998, and during the Class Period, filed a Form S-3 on December 3, 2001. Thus, this factor supports a finding of market efficiency. Report, ¶¶ 38-39.

Factor 5: Cause and Effect Relationship

The cause and effect relationship between unexpected information released to the market and movement of the stock price is the essence of an efficient market and the foundation for the fraud-on-the-market theory. *In re Xcelera.com Sec. Litig.*, 430 F.3d 503, 508 (1st Cir. 2005) (stating that the cause and effect relationship between pricing and new information is implicit in an efficient market). The movement of Halliburton's stock price during the Class Period when unexpected news was disseminated shows that Halliburton's stock traded in an efficient market. Report, ¶¶ 40-46.

Appendix B

Factor 6: Market Capitalization

During the Class Period, the market capitalization for Halliburton stock ranged from $5.1 billion, on the last day of the Class Period, to a Class Period high of $24 billion. Report, ¶ 47. Even at the lower end of this range, Halliburton's market capitalization supports a finding that the market for Halliburton stock was efficient. Report, ¶ 48.

Factor 7: Bid/Ask Spread

Bid/ask spreads are a measure of transaction costs; low transactions costs indicate that arbitrage opportunities can be exploited readily. Report, ¶ 49. During the Class Period, the average bid/ask spread as a percentage of the mean bid/ask price for Halliburton was 0.22%; the average for Halliburton's competitors was 0.36%. Such a low bid/ask spread indicates that arbitrage opportunities could be exploited, which is evidence of market efficiency. Report, ¶ 50.

Factor 8: Public Float

Courts have held that a large float percentage (percentage of shares held by the public) can be an indicator of market efficiency. *Unger*, 401 F.3d at 323; *Bell*, 422 F.3d 307 and 313, n.10. During the Class Period, there were between 429.0 million and 445.5 million shares of Halliburton stock outstanding, of which approximately 99% were held by the public. This large public float indicates an efficient market. Report, ¶ 51.

Each of the *Unger* factors supports the conclusion that Halliburton stock traded in an efficient market. In addition, Halliburton's listing on a national exchange; the presence of sophisticated investors; and, the coverage of Halliburton by wire services, financial press, and general media also support a finding of market efficiency. Report, ¶¶ 52-64.

b. Loss Causation

The Fifth Circuit, in *Oscar Private Equity Investment v. Allegiance*, recently held that to avail itself of the benefits of the fraud-on-the-market presumption of reliance at the class certification stage, the Lead Plaintiff must show loss causation. *Id.* at 269. More specifically, the *Allegiance* court found that, where there are multiple negatives, not all of which are alleged to be culpable, the Lead Plaintiff has the burden of showing that it was the culpable statement(s) that caused a significant amount of the decline in the stock price:

> when unrelated negative statements are announced contemporaneous of a corrective disclosure, the plaintiff must prove " that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline.

Id. at 270. In clarifying this burden, *Allegiance* affirmed that, at this stage, the Lead Plaintiff need not quantify damages:

> While counsel is correct that *quantification* of damages is presently unnecessary--*i.e.* proof that some percentage of the drop was attributable to the corrective disclosure--the plaintiffs must, in order to establish loss causation at this stage, offer some empirically-based showing that the corrective disclosure was more than just present at the scene.

Id. at 271. (Emphasis original).

In addressing the dissent's concerns that *Allegiance* does not provide adequate guidance as to "what form such proof might take[]", the court reiterated that such proof could come in the form of an events study and leaves open the possibility of other "options, subject to scrutiny in the first instance by opposing experts and the district courts." *Id.* at 265, n.22. *Allegiance* further suggests that such an event study could be based on "public data and public filings." *Id.* at 267. *Allegiance* confirms that analysts' opinions may be evidence of the cause of a stock decline, but will not be sufficient to carry Lead Plaintiff's burden "without reference to any post-mortem data they have reviewed or conducted." *Id.* at 271. In some circumstances, it is sufficiently evident that the stock was driven down by the culpable disclosure that no empirical analysis is necessary to disaggregate the effect of the culpable and the non-culpable disclosures. *See Greenberg v. Crossroads Systems, Inc.*, 364 F.3d 657 (5th Cir. 2004) (disclosure that revenue would be 66% below estimates sufficient to establish loss causation notwithstanding simultaneous release of non-culpable news).

Appendix B

Lead Plaintiff here has satisfied the *Allegiance* burden through the submission of the Nettesheim expert report. In preparation of the Report, Nettesheim reviewed all publicly available, relevant information for the Class Period, and determined that there were 24 instances of statistically significant declines in the company-specific return on Halliburton stock during the Class Period. Of those instances, eleven days corresponded to the release of culpable news, and only one of those days, January 5, 2000, involved multiple pieces of news, some culpable and some not.

As discussed in the Nettesheim Report, there are six instances (October 5, 1999, June 29, 2001, August 9, 2001, October 31, 2001, December 4, 2001 and December 7, 2001) in which there was but one piece of news that caused a statistically significant decline in the company-specific return on Halliburton stock during the Class Period. Report, ¶¶ 84, 115, 119, 125. As explained in the Report, the company-specific return nets out the change in the price attributable to changes in the relevant index and the market as a whole. Report, ¶ 81. As there is no other news or information that can explain the company-specific stock price decline on these days, as Nettesheim concluded, the decline in the price of Halliburton stock could only have been caused by the partial disclosure of the single piece of culpable news, and as to these instances, Lead Plaintiff has satisfied its burden of establishing loss causation. Report, ¶ 87, 118, 121, 133. *See Allegiance*, 487 F.3d. at 267 (a greater showing of loss causation is warranted in the instance of simultaneous disclosure of multiple pieces of negative news).

In addition, there are two instances (October 25, 2000 and December 22, 2000) in which there is more than one negative piece of news, all alleged to be culpable. Report, ¶¶ 93, 106. It is Lead Plaintiff's burden to attribute the cause of a decline among culpable and non-culpable negative statements. *Allegiance* does not require a Lead Plaintiff to attribute the cause of a decline among multiple culpable negative statements. *See Allegiance*, 487 F.3d at 265 ("we address here only the simultaneous disclosure of multiple negatives, not all of which are alleged culpable."). Accordingly, even without more, Lead Plaintiff has carried its burden of showing loss causation as to these instances.

And even though doing so is not required by *Allegiance*, Nettesheim has opined on the significance of each piece of news associated with this statistically significant decline in the price of Halliburton stock for these instances, utilizing the event study, and an empirical analysis of all of the information surrounding the news, including the analyst reports and the information utilized by those analysts. For example, after the market closed on Thursday, December 21, 2000, Halliburton pre-announced fourth-quarter earnings, formally unveiling the restructuring of its engineering and construction units and stated that it planned to take a charge of $120 million in the fourth quarter. Report ¶ 106. Of the $120 million special charge, $95 million (or 79%) was related directly to the cost overruns alleged by Lead Plaintiff, with the remaining $25 million related to the restructuring necessitated by the ongoing problems with the Dresser integration. Both of these "negatives" are culpable under the allegations of the FCAC.

Appendix B

This disclosure, and the analyst reports that disseminated the information, caused a statistically significant decline in Halliburton's share price. On December 22, 2000, Halliburton's stock price declined 2.7%, to close at $36.00. The company-specific return that day was negative 3.9%. Although the industry was down that day, the overall market was up more than 3.0%. While not required under *Allegiance,* Nettsheim opines that the significant cause of this decline was due to the "surprise" charge of $95 million to cover cost over runs. Report ¶¶ 106-111.

Finally, there is one instance (January 5, 2000), in which there is a mix of culpable and non-culpable negatives on a day in which there was a statistically significant decline in the company-specific return on Halliburton stock. Report ¶ 88. For this day, Nettesheim performed a rigorous empirical analysis whereby she 1) used econometric analysis to determine how much of the day's stock return is attributed to company-specific news and events, and how much of the day's stock return can be attributed to market and industry news and events; (2) examined all of the news surrounding the day on which the alleged disclosure was made to determine what the company said and what market participants said; 3) reviewed all of the analyst reports surrounding the day on which the alleged disclosure was made to determine how the company's statements or communications impacted market participants' assessments of the company's value; 4) conducted an empirical analysis of the information on and surrounding the disclosure date to determine what specific news items were important on the day of the

alleged disclosure; and 5) conducted an empirical analysis to determine the relative importance of different pieces of news with respect to impact on stock valuation.

On January 5, 2000, Halliburton's stock price declined 4.38%, from $38.50 to $36.81. The company-specific return that day was negative 4.3%. Report ¶ 88. Nettesheim opines that a significant portion of the stock price decline on January 5, 2000 was caused by information that partially corrected investors' erroneous assessments of the profitability of overseas construction projects and the benefits of the Dresser merger. Report ¶ 92.

3. The Class Action is Superior to Other Available Methods For the Fair and Efficient Adjudication of This Action

The matters pertinent to finding superiority include: (1) the interest of members of the class in individually controlling the prosecution or defense of separate actions; (2) the extent and nature of any litigation concerning the controversy already commenced by or against members of the class; (3) the desirability or undesirability of concentrating the litigation of the claims in the particular forum; and (4) the difficulties likely to be encountered in the management of a class action. Fed. R. Civ. Pro. 23(b)(3). Applying each of these four factors shows that class certification in this case is both useful and necessary.

First, with the possible exception of the Laborers National Pension Fund, Plumbers and Pipefitters National Pension Fund, and City of Dearborn Heights Act 345 Police & Fire Retirement System, who sought to be

appointed as Lead Plaintiffs, there has been no indication that any other Class Members would prefer to try his or her own case. Second, other than the consolidated cases, there are no known cases concerning this controversy. Third, it "is desirable that securities fraud cases involving a large number of plaintiffs with small individual claims proceed as class actions." *Keasler v. Natural Gas Pipeline Co.*, 84 F.R.D. 364, 368 (E.D. Tex. 1979); *Longden*, 123 F.R.D. at 551. Finally, Lead Counsel knows of no exceptional difficulties regarding trying this case as a class action. There will be no difficulties in managing the class because liability will be determined by common evidence and misstatements and omissions, and loss causation will be determined through common effect of disclosures on the stock price.

In such circumstances, class representation is the only way to afford relief to those plaintiffs whose claims are too small to permit them to bring individual suits, and is superior to other available methods for the fair and efficient adjudication of this controversy *Henry*, 199 F.R.D. at 573; *see also Levitan v. McCoy*, No. 00 C 5096, 2003 U.S. Dist. LEXIS 5078, at *6 (N.D. Ill. Mar. 28, 2003) ("securities fraud cases are uniquely situated to class action treatment since the claims of individual investors are often too small to merit separate lawsuits.").

Appendix B

CONCLUSION

For the reasons set forth herein, an Order should be entered (i) certifying this action as a class action pursuant to Rules 23(a) and 23(b)(3) of the Federal Rules of Civil Procedure; (ii) appointing AMS Fund and Ben Alan Murphey as Class Representatives; and (iii) appointing Lead Counsel, Boies, Schiller & Flexner LLP as Class Counsel.

Respectfully submitted,

BOIES, SCHILLER & FLEXNER LLP

REPORT OF JANE D. NETTESHEIM
September 17, 2007

Table of Contents
[TABLE INTENTIONALLY OMITTED]

I, JANE D. NETTESHEIM, declare:

I. Background and Qualifications

1. I am a financial economist and vice president of Stanford Consulting Group, Inc. ("SCG"), which

provides research, consulting, and expert services in financial economics and related areas to clients, including government agencies, corporations, and law firms. I have a B.A. in biology from the University of Colorado and an M.B.A. from the University of Hawaii, and I completed the coursework in the Ph.D. program in finance at the London Business School, University of London. My curriculum vitae and the list of the expert testimony I have provided by deposition or at trial are attached as Exhibit 1. The fees charged for this project are the standard hourly rates of employees of SCG. My current hourly rate is $475.

2. I have served as a consultant and expert in the areas of market efficiency, materiality, loss causation and the calculation of damages in many securities class actions. I have examined the relationship between stock price movements and changes in market and industry indices for a number of stocks in a variety of industries. I also have examined the relationship between information releases and changes in stock prices for a number of companies in a variety of industries. I have analyzed various data sources for information about shareholdings and trading activity for different types of market participants.

II. Scope of Engagement

3. Counsel for Lead Plaintiff has asked me to examine and opine on the efficiency of the market for the common stock of Halliburton Company, Inc. ("Halliburton" or the "Company")[1] during the period June 3, 1999, through

1. Herein, "Halliburton's stock" refers to the common stock of Halliburton .

December 7, 2001, inclusive (the "Class Period").[2] I have also been asked to conduct an analysis of materiality and loss causation pertaining to the alleged misrepresentations and omissions in this matter, and to address the causes of the decline in Halliburton's stock price during the Class Period.[3]

4. The opinions offered in this Report are subject to refinement or revision based on continuing analysis of the documents and materials listed below, as well as new or additional information which may be provided to or obtained by me in the course of this matter. I expect to review additional information and documents, including information and documents that may become available through discovery and the reports and depositions of other expert witnesses.

III. Bases for Opinions

5. My opinions expressed in this Report are based upon my professional knowledge and experience, as well as on a review of documents and information relevant to this matter. Exhibit 2 lists the materials I have obtained from Counsel or other identified sources. The materials I have relied upon in forming my opinions in this Report are identified in this Report and its Exhibits. Such

---

2. During the Class Period, Halliburton's common stock traded on the New York Stock Exchange ("NYSE") under the ticker "HAL."

3. Because discovery is just beginning in this action, this analysis is preliminary and based on the public information available to me at this time. I assume that the allegations outlined in the Complaint are true.

documents and information are typically relied upon by financial experts in securities class actions or by financial economists in their research. I reserve the right to modify or supplement my opinions expressed herein in the event that further information becomes available to me.

IV. Summary of Opinions

6. Based on my review of the evidence in this matter and analysis of data specific to Halliburton and its stock, I conclude that the market for Halliburton's stock during the Class Period was open, developed, and efficient.

7. Based on my review of the evidence in this matter and analysis of data and information specific to Halliburton during the Class Period, I conclude that:

- A significant part of the decline in Halliburton's stock price during the Class Period was caused by disclosures that Halliburton's exposure to liability in asbestos litigation was far larger than previously revealed to the public. Had Halliburton disclosed reasonable estimates of its asbestos exposure—that Lead Plaintiff alleges could have been and should have been disclosed earlier—Halliburton's stock price would have traded at prices materially lower than prices at which it did trade during the Class Period.

- A significant part of the decline in Halliburton's stock price during the Class Period was caused by disclosures related to Halliburton's representations and omissions concerning the condition and success of its engineering and construction operations

related to large overseas fixed-price/lump sum contracts and the benefits resulting from its merger with Dresser Industries, Inc. ("Dresser"). Had Halliburton 1) not included unapproved claims in its reported revenues for certain quarters in 1998, 1999 and 2000—that Lead Plaintiff alleges Halliburton should not have included during the Class Period; and 2) disclosed that it was not going to realize the benefits it had originally anticipated from the Dresser merger—that Lead Plaintiff alleges could have and should have been disclosed earlier—Halliburton's operating income would have been lower for certain quarters and for the years 1998, 1999 and 2000, and Halliburton's stock price would have traded at prices materially lower than prices at which it did trade during the Class Period.

8. The misrepresentations and omissions alleged by Lead Plaintiff caused Halliburton's stock price to be inflated during the Class Period as evidenced by the partial disclosures during the Class Period. Those disclosures revealed information about Halliburton's financial condition, which Lead Plaintiff alleges was previously misrepresented and/or omitted by Defendants, that caused the prices of Halliburton's stock to decline.

V. Market Efficiency: Securities prices in efficient markets reflect the market's consensus as to fair value given all publicly available information at the time of purchase or sale

9. Over the past thirty years, the efficient capital market hypothesis ("ECMH") has risen to a prominent

position in financial and economic theory. In its most commonly held form—known as "semi-strong"—the ECMH states that the securities markets incorporate all publicly available information. This hypothesis has been empirically validated in numerous studies.[4] The ECMH also has stood up against its critics; while anomalies have occurred in financial markets, they are random and do not allow for trading strategies that would create abnormal profits.[5,6]

---

4. *See, e.g.*, Eugene F. Fama, "Efficient Capital Markets: A Review of Theory and Empirical Work," *Journal of Finance;* Volume 25, Issue 2; May, 1970; pp. 383-417. In this article, Fama provides an overview of a number of studies supporting the efficiency of capital markets.

5. Fama, Eugene F., "Market Efficiency, Long-term Returns, and Behavioral Finance," *Journal of Financial Economics* Vol. 49, 283-306 (1998). As Fama states: "Consistent with the market efficiency hypothesis that the anomalies are chance results, apparent overreaction to information is about as common as underreaction, and post-event continuation of pre-event abnormal returns is about as frequent as post-event reversal. Most important, consistent with the market efficiency prediction that apparent anomalies can be due to methodology, most long-term return anomalies tend to disappear with reasonable changes in technique."

6. Malkiel, Burton G., "The Efficient Market Hypothesis and Its Critics," *Journal of Economic Perspectives* Vol. 17, 59-82 (Winter 2003). Malkiel writes "Before the fact, there is no way in which investors can reliably exploit any anomalies or patterns that might exist. ... [T]hese patterns are not robust and dependable in different sample periods, and some of the patterns based on fundamental valuation measures of individual stocks may simply reflect better proxies for measuring risk .... Many of the predictable patterns that have been discovered may simply

10. The fraud-on-the-market theory relies on informational efficiency, specifically that the price of the security reflects publicly available information. For defendants' statements to have impacted stock prices, the market must be informationally efficient. Informational efficiency also has been cited recently by Courts as an appropriate measure of market efficiency in certain securities cases.[7]

11. In an efficient market, investors can rely on the market price as reflecting all publicly available information. In other words, the price at which an investor can buy or sell a security is the market's consensus as to that security's fair value given all of the publicly available information at the time of purchase or sale.

12. The seminal Rule 10b-5 case of the 1980's, *Basic Inc. v. Levinson*, clarified that because most

---

be the result of data mining." He further quotes Richard Roll, an eminent academic financial economist and portfolio manager, "I have personally tried to invest money, my client's money and my own, in every single anomaly and predictive device that academics have dreamed up .... I have attempted to exploit the so-called year-end anomalies and a whole variety of strategies supposedly documented by academic research. And I have yet to make a nickel on any of these supposed market inefficiencies'" a true market inefficiency ought to be an exploitable opportunity. If there's nothing investors can exploit in a systematic way, time in and time out, then it's very hard to say that information is not being properly incorporated into stock prices."

7. *See In re PolyMedica Corp. Securities Litigation*, No. 05-1220, slip op. (1st Cir. Dec. 13, 2005); *See also In re Xcelera.com Securities Litigation*, No. 05-1221, slip op. (1st Cir. Dec. 13, 2005)

publicly available information is reflected in the market price, an investor's reliance on any public material misrepresentations may be presumed for purposes of a Rule 10b-5 action.

> The fraud on the market theory is based on the hypothesis that, in an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business. ...
>
> Misleading statements will therefore defraud purchasers of stock even if the purchasers do not directly rely on the misstatements. ... The causal connection between the defendants' fraud and the plaintiffs' purchase of stock in such a case is no less significant than in a case of direct reliance on misrepresentations.[8]

13. The fraud-on-the-market theory permits investors in an efficient market to rely on the market price, even though that price may contain the effects of misrepresentations or omissions. The *Basic* court noted:

> In an open and developed market, the dissemination of material misrepresentations or withholding of material information typically affects the price of the stock, and purchasers

---

8. *Basic Inc. v. Levinson,* 485 U.S. 224 p. 241-242 (1988). Quoting *Peil v. Speiser,* 806 F.2d 1154, 1160-61 (3d Cir. 1986).

generally rely on the price of the stock as a reflection of its value.[9]

14. A direct empirical test of market efficiency is to examine price responsiveness to the release of new and material information. If the security price responds quickly, the response supports a conclusion that the market for the security is efficient. As an indirect test of efficiency, one can examine whether market conditions promote efficiency. Case precedent exists on such indirect indicators of market efficiency. The *Cammer* Court found that for the market for a particular security to be efficient, the following two criteria should be met:[10]

- it should trade in an open market in which anyone, or at least a large number of persons, can buy or sell;

- it should trade in a developed market which has a relatively high level of activity and frequency, and for which trading information *(e.g.,* price and volume) is widely available. It usually, but not necessarily, has continuity and liquidity (the ability to absorb a reasonable amount of trading with relatively small price changes).

---

9. *Basic Inc. v. Levinson,* 485 U.S. 224 at 244 (1988). Quoting *Peil v. Speiser,* 806 F.2d 1154, 1161 (3d Cir. 1986).

10. *Cammer v. Bloom,* 711 F. Supp. 1264, 1276 n. 17 (D.N.J. 1989): "Definitions of the key terms which underlie the fraud on the market theory were offered by commentators Bromberg & Lowenfels, 4 *Securities Fraud and Commodities Fraud,* §8.6 (Aug.1988)."

15. Specifically, the *Cammer* Court identified five factors that may be considered in determining whether a market for a stock is efficient and, therefore, whether security prices respond quickly to new relevant information. These factors include both a direct empirical test, as well as indirect indicators, of the efficiency of a market for a security. The *Unger* Court and the *Bell* Court also considered these five factors in evaluating market efficiency.[11] In forming my opinion, I have considered each of the five *Cammer/Unger/Bell* Factors as applied to the market for Halliburton stock:[12]

i. whether the security trades at a large weekly volume;

ii. whether analysts follow and report on the security;

iii. whether the security has market makers and whether there is a potential for arbitrage activity;

iv. whether the company is eligible to file Securities and Exchange Commission ("SEC") Form S-3; and

v. whether there are empirical facts showing a cause-and-effect relationship between unexpected corporate events or financial information releases, and an immediate response in the security's price.

---

11. *Unger v. Amedisys, Inc.*, 401 F.3d 316, 321 (5th Cir. 2005); *Bell v. Ascendant Solutions, Inc.*, 422 F.3d 307, 311 (5th Cir.2005).

12. *Cammer*, 711 F. Supp. pp. 1285-87.

16. The *Cammer/Unger/Bell* factors address informational efficiency, *i.e.*, whether the market conditions exist such that when material, new, unexpected information is released, the price of the company's security changes to reflect the new mix of public information.

17. I also have considered additional factors that were considered by the *Unger* and *Bell* Courts (as well as the *Krogman* Court) in evaluating market efficiency:[13]

vi. the Company's market capitalization;

vii. the bid/ask spread for stock sales; and

viii. the security's float, or shares outstanding excluding insider-owned stock.

18. In addition to the factors discussed above, I have considered the following factors which have been addressed in the economic literature, and/or have been considered by Courts:

ix. the principal exchange on which the security was listed and traded;

x. institutional ownership of the security; and

---

13. *Unger*, 401 F.3d 316 at 323, HN10, *Bell*, 422 F.3d 307 at 313, n10; *Krogman v. Sterritt* 202 F.R.D. 467 (N.D. Tex. 2001) pp. 474, 478; *See also, O'Neil v. Appel* 165 F.R.D. 479 (W.D. Michigan 1995) at 503.

xi. news coverage and dissemination of information by news sources pertaining to the Company and its securities during the Class Period.

19. Consideration of the *Cammer/Unger/Bell* factors (the first five factors discussed below), the *Unger/Bell* factors (factors six through eight discussed below), and these additional factors (factors nine through eleven discussed below) supports my conclusion that the market for Halliburton stock during the Class Period was informationally efficient.[14]

VI. Application of the *Cammer/Unger/Bell* Factors and Additional Factors as Indicia of the Efficiency of the Market for Halliburton's Stock

A. *Cammer/Unger/Bell* Factor 1: Weekly Trading Volume

20. A market is liquid if investors can trade a large number of shares on demand and, absent new information, an individual investor can buy and sell without affecting the price. The high level of trading activity associated with trading in Halliburton's stock during the Class Period indicates that Halliburton's stock traded in a liquid market. High trading volume generally indicates that there is sufficient interest in the company and its

---

14. *See also, Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, --- F.3d ----, No. 05-10791, 2007 WL 1430225 (C.A.5 May 16, 2007), FN42. Here, Judge Higginbotham refers to the *Cammer/Unger/Bell* Factors and the *Unger/Bell* Factors as the usual indicia of market efficiency, citing *Bell*.

stock such that analysts will conduct research and report their analysis to market participants. Liquidity and high trading volume also allows investors to quickly buy and sell shares when their assessments about the value of a company's stock have changed.

21. According to one authority, "turnover measured by average weekly trading of 2% or more of the outstanding shares would justify a strong presumption that the market for the security is an efficient one; 1% would justify a substantial presumption."[15, 16]

22. During the Class Period, the average weekly reported trading volume for Halliburton's stock was 16,796,502 shares. (See Exhibit 3 for the daily reported closing prices and volume of Halliburton's stock, and

---

15. *Cammer* at 1293, citing Bromberg.

16. The *Cammer* Court examined a stock that traded on the NASDAQ; Halliburton common stock traded on the NYSE during the Class Period. On the NASDAQ, a dealer is on one side of every transaction. When an investor sells one share on the NASDAQ, it is sold to a dealer and a transaction of one share is reported; then another investor buys that same share from the same dealer, and it is reported as another transaction of one share. Only one share has changed hands between the two investors, but trading volume of two shares has been reported. All else being equal, the same share trade on the NYSE would be reported as trading volume of one share. The *Cammer* Court's benchmark of average weekly trading turnover applies to stocks trading on the NASDAQ. All else being equal, as a result of the "double-counting" on NASDAQ, a benchmark of average weekly trading turnover of 2% for a NASDAQ traded stock would be 1% for a NYSE traded stock.

Exhibit 4 for a summary of weekly trading of Halliburton's stock.) Halliburton's shares issued and outstanding totaled approximately 440.6 million shares at the start of the Class Period and approximately 429.4 million shares at the end of the Class Period. (See Exhibit 5 for data on shares outstanding for Halliburton.) Weekly trading volume for Halliburton was, on average, 3.8% of shares outstanding.

23. The annualized turnover ratio is the annual reported trading volume divided by the number of shares outstanding. Total trading volume of Halliburton's stock during the Class Period was 2.187 billion shares, compared to 429.4 million shares outstanding at the end of the Class Period. This is an annualized turnover ratio (share volume during the Class Period divided by shares outstanding divided by the time period in years) of 202.7%. In 1999, 2000 and 2001, the average annualized turnover ratio for NYSE listed stock was 78%, 88% and 94 %, respectively.[17]

24. Given the volume of trading relative to the number of shares outstanding, Halliburton's stock experienced high weekly trading volumes and annualized turnover ratio. Halliburton's high trading volume indicates that the market for Halliburton's stock was efficient during the Class Period.

---

17. NYSE 2001 Fact Book.

Appendix B

B. *Cammer/Unger/Bell* Factor 2: The Number of Securities Analysts Following and Reporting on Halliburton

25. Securities analysts research and report to investors on the financial condition and prospects of a covered company. In conducting their research, analysts typically have greater resources available to them than do individual investors. Analysts are conduits to the market for information collected from management from on-site visits, conference calls accompanying key company announcements, and other contacts with senior management. Analysts can channel new information to the market rapidly through their published reports, online reporting services such as First Call, and alerts given to clients and other employees of the same investment firm. Analysts thus facilitate the dissemination of new information to investors and share price reaction to new information.

26. During the Class Period, securities analysts from numerous firms reported on Halliburton, including, for example: ABN Amro Bank N.V. U.S.A; A.G. Edwards & Sons, Inc.; Argus Research Corporation; Bear, Stearns & Co., Inc.; Brown Brothers Harriman & Co.; Capital One Southcoast, Inc; CIBC World Markets Corp.; Deutsche Bank Securities Inc.; ING Financial Markets USA; Jefferies & Company, Inc.; Johnson, Rice & Co.; Painewebber Inc.; PNC Institutional Investment Service; Prudential Equity Group, Inc.; RBC Capital Markets; Sanford C. Bernstein & Co., Inc.; Smith Barney Citigroup; Southwest Securities; Stephens Inc.; SunTrust Robinson

Humphrey Capital Markets; UBS (US); and Wachovia Securities. Exhibit 6 contains a list of analyst reports for Halliburton issued during the Class Period.[18]

27. The large number of analysts reporting on Halliburton and analysts' reports published about Halliburton during the Class Period supports my conclusion that there was an efficient market for Halliburton's stock during that time.

C. *Cammer/Unger/Bell* Factor 3: The Number of Market Makers in Halliburton's Stock

28. This third *Cammer/Unger/Bell* factor applies directly to stocks traded on the NASDAQ because that exchange uses market makers to facilitate market efficiency. The NYSE, where Halliburton stock was traded prior to and during the Class Period, uses specialists to facilitate an orderly and efficient market for each security. As there is but one specialist for NYSE listed stocks, rather than look at the number of market makers, I have examined the role of the specialist as well as arbitrage opportunities for Halliburton's stock. Market makers and specialists enable investors to trade promptly upon

---

18. Exhibit 6 contains a list of 397 reports that are available from Thomson Research (www.investext.com) from a search of "Halliburton CO" in the "Company" field, and from Reuters from a search of "HAL" in the Primary Ticker (Exhibit 6 excludes duplicative reports between the two sources). This is only a partial list of analyst reports on Halliburton. Several firms, *e.g.*, Merrill Lynch and Goldman Sachs, do not make their analysts' reports available through public databases.

the arrival of new relevant information, and thereby new information can be rapidly reflected in securities prices.

29. The NYSE assigns one dealer, known as the specialist, to each security traded on the NYSE. These specialists are independent companies in corporate or partnership structures whose responsibilities require them to maintain a fair, competitive, orderly and efficient market for the securities assigned to them. Specialists achieve this function by performing four critical roles: (1) as an auctioneer, continually showing the best bids and offers, and maintaining order in the crowd; (2) as an agent for SuperDot orders (direct electronic routing system to and from the trading floor) as well as for brokers; (3) as a catalyst for order flow by informing interested parties of items available in the market; and (4) as a principal, where the specialist has an obligation to enter into a transaction using its own capital if there is a willing buyer or seller with no counterparty in the marketplace. Specialists thus facilitate continuous trading during market hours.[19]

30. Halliburton's reported specialist during the Class Period was LaBranche & Co. LLC ("LaBranche"). According to their website:

> [LaBranche] is one of the largest Specialists in equity securities listed on the New York and American Stock Exchanges. As a Specialist,

---

19. The Fifth Circuit has certified a class of purchasers of common stock traded on the NYSE. *See, e.g., In Re Enron Corporation Securities § Derivative & "ERISA" Litigation,* Civil Action Number H-01-3624 Consolidated Cases.

> we play an integral role in both the NYSE and the AMEX floor-based trading auction model by acting as the exclusive broker *(i.e.,* agent) or market-maker *(i.e.,* principal) in our portfolio of listed company stocks and options. The Specialist facilitates all buying and selling of securities of the companies it represents by bringing timely information, critical expertise, and needed liquidity to the forefront of the auction market place.[20]

31. The third *Cammer/Unger/Bell* factor also addresses the existence of arbitrageurs, generally understood to be sophisticated investors who can act rapidly to take advantage of pricing discrepancies. Arbitrage has been defined as:

> ... the process of earning riskless profits by taking advantage of differential pricing for the same physical asset or security. As a widely applied investment tactic, arbitrage typically entails the sale of a security at a relatively high price and the simultaneous purchase of the same security (or its functional equivalent) at a relatively low price.
>
> Arbitrage activity is a critical element of modern, efficient security markets. Because arbitrage profits are by definition riskless, all investors have an incentive to take advantage

20. www.labranche.com/invrel.html

> of them whenever they are discovered. Granted, some investors have greater resources and inclination to engage in arbitrage than others. However, it takes relatively few of these active investors to exploit arbitrage situations and, by their buying and selling actions, eliminate these profit opportunities.[21]

32. Short interest may be an indicator of arbitrage activity as arbitrageurs act to take advantage of and thereby eliminate any mispricing which may exist by simultaneously buying and selling securities, and/or by borrowing and selling short. A short sale is the sale of a stock that an investor does not own. When an investor holds the belief that a stock price will decline, he can borrow the stock, sell the stock, and then buy the stock back later to return it to the lender. If the price drops between the time that short seller sold the stock and he buys it back, the short seller realizes a gain. Thus, short-selling can facilitate market efficiency by allowing borrowing and selling of stock when investors believe that the price could decline. I have examined the level of short interest in Halliburton's stock in order to determine if there were any impediments to short selling or arbitrage opportunities.

33. Throughout the Class Period, there were at least 429 million Halliburton shares outstanding, held by more than 800 institutions and many other investors who could

---

21. Sharpe, William F., *et al., Investments,* (NJ: Prentice Hall) 1999, 6th ed., p. 284 .

have sold their shares of Halliburton. In addition, shares held by institutions are often available for borrowing by short sellers; thus the large number of institutional shareholders and their large shareholdings could facilitate market efficiency by permitting whatever short sales arbitrageurs wished to make.

34. During the Class Period there was substantial short interest in Halliburton and large changes in short interest. (See Exhibit 7.) However, the level of short interest is not large relative to Halliburton's shares outstanding. The average short interest in Halliburton's stock represented approximately 2.3% of total shares outstanding. The level of short interest during the Class Period indicates that shares should have been available to borrow for short-selling.

35. Economist Gene D'Avolio, while preparing his dissertation for his Ph.D. in Business Economics (awarded 2004) at Harvard University, summarized the market for short-selling in the United States by examining data from April 2000 to September 2001.[22] The specific data for Halliburton's stock, or any stock, are not available from this database; however, D'Avolio examined a very large sample of data over a period of time that includes part of the Class Period.

36. D'Avolio estimated that in the second quarter of 2001, as much as one-quarter of the U.S. market

---

22. Gene D'Avolio, "The market for borrowing stock," *Journal of Financial Economics,* November 2002, vol. 66, pp. 271-306.

capitalization was available as loan supply for short-selling and that 7% of that capacity was utilized. In the database that he examined,[23] D'Avolio found that short interest was, on average, 2.3% of shares outstanding. During 2001, Halliburton's stock was the type of stock that in D'Avolio's database had excess supply available for borrowing for short-selling, *i.e.*, companies with large market capitalization and substantial institutional ownership. D'Avolio also found that common stock issued by large companies such as Halliburton had low implied loan fees, which indicated that short-selling was not restricted and that arbitrage opportunities could be exploited. The level of short interest in Halliburton's stock relative to the public float indicates that short-selling of Halliburton's stock was not constrained during the Class Period and that arbitrage opportunities could be exploited, which is evidence in support of market efficiency.

37. Trading in Halliburton stock on the NYSE during the Class Period, where the market in the stock was facilitated by a specialist, indicates that the market for Halliburton stock was efficient during the Class Period, as does the possibility of arbitrage activity via short sales.

D. *Cammer/Unger/Bell* Factor 4: Whether Halliburton was Eligible to File SEC Form S-3

38. Form S-3 is a simplified registration form that may be used if a company has been subject to Securities

---

23. One of the largest security lenders in the world that accounts for significantly more than 10% of the total market short interest (and for many stocks the lender had sufficient supply to cover total short interest on its own) provided a proprietary database to D'Avolio.

Exchange Act of 1934 reporting requirements for more than one year, has filed all documents in a timely manner during the prior twelve months, and has not, since the last audited statements, failed to pay required dividends or sinking funds, nor defaulted on debts or material leases.[24] Thus, companies that have previously provided what the SEC deems to be sufficient public information may incorporate prior filings by reference into current filings, and need not repeat such information since it is already widely publicly available.

39. Halliburton filed amended Form S-3 prior to the Class Period on September 25, 1998. During the Class Period, Halliburton filed Form S-3 on December 3, 2001. That Halliburton was eligible to file Form S-3 with the SEC prior to and during the Class Period is another factor which supports my conclusion that the market for Halliburton's stock was efficient.

E. *Cammer/Unger/Bell* Factor 5: Empirical Facts Showing a Cause-and-Effect Relationship between Unexpected Corporate Events or Financial Releases and an Immediate Response in the Stock Price

40. According to the ECMH, securities prices in efficient markets incorporate all available public information. A direct test of market efficiency is to conduct an event study to identify dates on which material new information was released to the market, and to examine whether the stock price responded to that information.

---

24. www.sec.gov/info/edgar/forms.htm

Appendix B

It is important to note that material new information is new once, *i.e.*, once incorporated into the market mix of information with subsequent price reaction, successive announcements of the same information will have no additional effect on share price.

41. I performed an event study to examine the publicly available company-specific information contemporaneous with statistically significant common stock price returns[25]—in other words, to determine whether material news affecting Halliburton promptly caused a measurable share price reaction after accounting for general market and industry effects. A description of the regression analysis used for this event study is described in the Appendix to this Report.

42. The table below includes the days during the Class Period with statistically significant changes in Halliburton's stock price and the relevant information that was disseminated to the market. There are a total of 7 days during the Class Period that have statistically significant positive returns and 24 days during the Class Period that have statistically significant negative returns (there are a total of 31 days with statistically significant stock price returns). In general, large significant changes in Halliburton's stock price are associated with material, new and unexpected information about the Company.

---

25. Herein, the stock price return on a given day is equal to: (that day's closing price plus the dividend, if any, divided by the previous trading day's closing price) minus 1.

43. I noted that on certain days with significant stock price returns, there was no company-specific news and the statistically significant returns occur because the Halliburton stock return is not consistent with relatively large market or industry-specific returns. This occurs on four days, specifically, February 10, 2000, October 24, 2000, December 18, 2000, and February 12, 2001. On at least one of these days, the large market or industry-specific returns reflect material news releases from another company. Therefore, it is consistent with the ECMH that Halliburton's stock return would not necessarily move with the market or industry, *i.e.*, its relatively stable stock price, although statistically correlated with the market and industry indices, is not unexpected.

44. I also noted that there are five days with significant stock price changes for which I have found little or no "new news" pertaining to Halliburton, specifically, June 18, 1999, October 15, 1999, February 25, 2000, May 19, 2000, and November 6, 2001. This is not unexpected as I do not have access to all of the information that was disclosed about the Company during the Class Period. Certain information, including oral communications, information from online reporting services such as First Call, and private investment alerts and analyst reports given to clients and other employees of the same investment firm, are not publicly available or are not maintained in historical databases. Moreover, Halliburton's stock price may be affected by news that I did not capture in my searches, such as news pertaining to one or more of Halliburton's major clients or competitors (that does not refer specifically to Halliburton). On certain dates, the

fact that I have not located news pertaining to Halliburton that explains the Company's stock price reaction does not preclude me from concluding that the market for Halliburton's stock was efficient during the Class Period.

45. Following is a summary of all days that have statistically significant stock price returns. A further discussion of the news on each day is included in the Appendix to this Report.

Date	Actual Return	Company-Specific Return	News
6/18/1999	-3.7%	-4.1%	No company-specific news on that day to explain the movement of the stock. However, on the following trading day, Monday, June 21, there was news that oil inventories were high and that this could put pressure on oil prices and, therefore, on values of oil companies and oil services companies.
10/5/1999	-13.2%	-9.0%	The Company warned that it expected its 1999 third-quarter earnings to be in the range of 11 to 13 cents per diluted

Appendix B

			share. The previous average analyst estimates was 19 cents per share. The Company attributed the reduction, in large part, to the lower than expected profits of the joint ventures of its engineering construction units and many of the other business units of the Dresser Equipment Group.
10/15/1999	-5.8%	-3.6%	No company-specific news on that day to explain the movement of the stock. On October 18, Schlumberger Ltd., which at that time was the world's second biggest oilfield services company (second by revenues to Halliburton), reported third quarter earnings which fell 60 percent compared with the prior year but rose four percent from the previous quarter.

Appendix B

10/27/1999	-3.4%	-3.5%	An analyst at Brown Brothers Harriman lowered her estimates for fourth quarter 1999 and for the year 2000.
1/5/2000	-4.4%	-4.3%	Analysts cut their estimates of Halliburton's earnings for 2000 and 2001 following a conversation with the company.
1/10/2000	-4.0%	-3.9%	An analyst reduced his earnings estimates for 2000.
1/12/2000	-6.8%	-3.6%	The Houston Chronicle reported that "Oil-field service companies' earnings are also expected to be a mixed bag. Weatherford International, Smith International, Halliburton and Schlumberger are all projected to earn less in the 1999 fourth quarter than they did the year before."
2/10/2000	-0.2%	-5.1%	This company-specific decline is driven by the market and the industry,

Appendix B

			which were up that day. No company-specific news on that day to explain the movement of the stock.
2/25/2000	-4.9%	-3.6%	There was no company-specific information to explain the decline that day in the stock; however, analysts commented on the recent poor performance in the stock prices of oil service companies.
5/2/2000	7.1%	3.7%	News commentators attributed the gain in Halliburton's stock price to OPEC's anticipated decision to not increase production quotas.
5/19/2000	2.5%	3.9%	There was no company-specific information to explain the increase in the stock, although analysts later commented on the recent increase in the stock prices of oil service companies.

Appendix B

5/30/2000	4.7%	3.6%	On Saturday, May 27, the weekly financial newspaper *Barron's* issued a positive report on Halliburton, stating it expected Halliburton's stock price to recover over the next 18 months. On Tuesday, May 30, 2000, an analyst raised his price target for Halliburton.
6/8/2000	-1.8%	-3.5%	An analyst met with the Company on June 7. The analyst's report was issued on June 8, and based on that meeting, he lowered his estimate for second-quarter operating earnings for the Company by a penny to 64 cents.
10/6/2000	-5.0%	-3.8%	On October 5, 2000, Owens-Corning filed for bankruptcy protection "after it ran out of options to pay asbestos lawsuit claims that could eventually cost the company $7 billion." The October 9 edition of *Barron's* discussed

Appendix B

			Halliburton's asbestos litigation exposure in light of the Owens-Corning situation.
10/23/2000	-6.5%	-3.5%	Halliburton reported that its Brown & Root Services unit was a target of the federal grand jury investigation.
10/24/2000	1.1%	4.2%	This is a statistically significant increase because both the market and the industry were down that day. While there is no company-specific news on that day to explain the movement of the stock, it is likely a partial correction from the prior day's news.
10/25/2000	-11.0%	-6.6%	Halliburton announced that it intended to restructure and shrink its engineering and construction units into a single unit, which prompted certain analysts to cut earnings forecasts.

Appendix B

12/18/2000	4.0%	-3.8%	The company-specific return that day is a statistically significant decline because the industry was up sharply that day.
12/22/2000	-2.7%	-3.9%	On December 21, Halliburton pre-announced fourth-quarter earnings and formally unveiled the restructuring of its engineering and construction units and stated that it planned to take a charge of $120 million in the fourth quarter, the bulk of which was due to cost overruns at several overseas projects. On December 22, the overall market was up more than 3.0% such that this was a statistically significant decline.
2/12/2001	0.4%	4.6%	The company-specific return is a statistically significant increase because the industry was down that day. The industry move was

Appendix B

			due to a significant decline in Schlumberger stock (12%), a major Halliburton competitor, on news of a proposed cash purchase of Sema PLC, a British technology information firm.
4/26/2001	9.1%	3.7%	Halliburton released its first-quarter 2001 financial results, reporting earnings on the low end of analysts' estimates, but stating that the company expected 2001 earnings per share ("EPS") to be at or above $1.30, which was higher than analysts' consensus forecast of $1.20. Some analysts raised their estimates and/or rating for Halliburton.
6/29/2001	-4.2%	-4.6%	Halliburton announced that a former subsidiary of Dresser, Harbison-Walker ("Harbison"), had been requesting the Company's financial

Appendix B

			assistance with asbestos claims Harbison agreed to assume in 1992 after it was spun off from Dresser. Certain analysts expressed concern over the Company's potential exposure to asbestos liability.
7/26/2001	3.7%	3.4%	Halliburton released its second quarter financial results, reporting strong revenue and earnings and, as a result, several analysts raised their estimates.
8/9/2001	-4.5%	-5.2%	Halliburton filed Form 10-Q with the SEC, in which it increased its accrued net liability for known open asbestos claims to $124 million (from $30 million on March 31, 2001, and $29 million on Dec. 31, 2000). Certain analysts responded that the situation was now more complex and uncertainty was increased.

Appendix B

10/31/2001	-6.3%	-4.9%	A jury in Mississippi found Dresser (through Harbison) liable in two of six asbestos cases for total compensatory damages of $21.3 million. One analyst was surprised by the size of the award.
11/1/2001	-2.9%	-3.7%	While there is no company-specific news on that day to explain the movement of the stock, it may reflect further concerns related to the October 31, 2001 news. The market was up that day.
11/6/2001	-3.9%	-3.5%	There was no company-specific news on that day consistent with the price decline.
11/9/2001	0.2%	-3.4%	Salomon Smith Barney issued a report on Halliburton in which the analyst lowered his earnings estimates for fourth quarter 2001. The industry was up that day.

Appendix B

12/4/2001	-0.7%	-3.7%	A Texas District Court had entered a judgment against Dresser on a $65 million jury verdict rendered in September 2001. The same district court also entered three additional judgments against Dresser in favor of 100 other asbestos plaintiffs in the aggregate amount of $35.7 million related to an alleged breach of a purported settlement agreement.
12/5/2001	0.5%	-3.8%	This is a statistically significant negative return because both the market and the industry are up that day. While there is no company-specific news on that day to explain the movement of the stock, it likely reflects further concerns related to the December 4, 2001 news.

12/7/2001	-42.4%	-42.7%	A Maryland jury had awarded a $30 million verdict against Dresser in favor of five plaintiffs in an asbestos litigation. Several analysts issued reports that day in response; some downgraded ratings and lowered price targets citing mounting asbestos liabilities.

46. The events on dates of significant Halliburton stock price movement described above clearly illustrate that large changes in Halliburton's stock price generally are associated with important new information, which supports my conclusion that the market for Halliburton's stock was efficient during the Class Period.

F. *Unger/Bell* Factor 6: Market Capitalization

47. Courts have found that a large market capitalization can be an indicator of market efficiency.[26] Halliburton's stock had substantial market capitalization (calculated as the number of shares multiplied by the prevailing share price) throughout the Class Period. The market capitalization for Halliburton ranged from $15 billion to $23 billion in 1999; from $15 billion to $24 billion in 2000;

---

26. *Unger*, 401 F.3d 316 at 323, HN10; *Bell*, 422 F.3d 307 at 313, n10; *Krogman* 202 F.R.D. 467 at 478; *O'Neil* 165 F.R.D. 479 at 503.

and from $5.1 billion to $21 billion in 2001. Even on the last day of the Class Period, December 7, 2001, after a decline in the value of Halliburton's market capitalization of more than 42%, its market capitalization was greater than $5.1 billion. See Exhibit 8. The average market capitalization of a NYSE stock was $5.6 billion, $6.0 billion, and $5.7 billion in 1999, 2000, and 2001, respectively.[27]

48. Halliburton's market capitalization was substantially greater than the average for a NYSE stock throughout the Class Period prior to December 7, 2001. The relatively large market capitalization of Halliburton stock supports my conclusion that the market for Halliburton's stock was efficient during the Class Period.

G. *Unger/Bell* Factor 7: Bid/Ask Spread

49. Bid/ask spreads are a measure of transaction costs and low transactions costs indicate that arbitrage opportunities can be exploited readily. Exhibit 9 contains the median and mean bid/ask spread, both as a dollar amount and percentage of the mean bid/ask prices, during the Class Period for Halliburton and its competitors. The more relevant analysis is to examine the bid/ask spread quotes from the listing exchange rather than all exchanges (including the non-listing exchanges). Bid/ask spread quotes from non-listing exchanges frequently include quotes that are so large as to be obvious errors or meaningless, *i. e.*, not reflective of actual transactions.

---

27. NYSE Factbook Online http://www.nysedata.com/nysedata/Default.aspx?tabid=115 (select NYSE Historical Statistics then NYSE Overview Statistics).

Appendix B

50. During the Class Period, the average bid/ask spread as a percentage of the mean bid/ask price for Halliburton was 0.22%; the average for Halliburton's competitors was 0.36%.[28] Halliburton's bid/ask spreads are comparable to its competitors during the Class Period. That bid/ask spreads are not large indicates that arbitrage opportunities could be exploited, which is evidence in support of market efficiency.

H. *Unger/Bell* Factor 8: Public Float

51. Courts have held that a large float percentage (percentage of shares held by the public) can be an indicator of market efficiency.[29] During the Class Period, there were between 429.0 million and445.5 million shares of Halliburton stock outstanding. Insider holdings ranged between approximately 2.0 million and 3.6 million shares during the Class Period. The public float was approximately 99% of shares outstanding throughout the Class Period. See Exhibit 10.

I. Factor 9: Listing Exchange

52. A security's listing on a national exchange means that financial information about that company is readily available to investors, at a minimum, through the

---

28. The figures are for quotes on each company's listing exchange. In Exhibit 9, I have also provided the bid/ask spread for all quotes included in the TAQ database .

29. *Unger*, 401 F.3d 316 at 323, HN10; *Bell*, 422 F.3d 307 at 313, n10; *Krogman* 202 F.R.D. 467 at 478; *O'Neil* 165 F.R.D. 479 at 503.

company's SEC filings. Listing on the NYSE, AMEX or NASDAQ, means that investors have access to trading prices and volumes throughout the trading day. Rules of the national exchanges require that investors buy at the lowest ask price and sell at the highest bid price prevailing at the time of their trade.[30] Because a national exchange brings together many thousands (or millions) of investors, trading prices reflect a consensus opinion as to securities' values. At least one authority has said the following:

> ... at a minimum, there should be a presumption-probably conditional for class determination-that certain markets are developed and efficient for virtually all the securities traded there: the New York and American Stock Exchanges, the Chicago Board Options Exchange and the NASDAQ National Market System.[31]

In the *Cammer* decision, the Court stated:

> ... some may concur with [Defendant's] suggestion ... that companies listed on national stock exchanges or companies entitled to issue new securities using SEC Form S-3 would almost by definition involve stock trading in an "open and developed" market.[32]

31. Bromberg & Lowenfels, 4 Securities Fraud and Commodities Fraud, Section 8.6 (Aug. 1988) (quoted in *Cammer*, 711 F. Supp at 1292).

32. *Cammer*, 711 F. Supp. at 1276-77 (D.N.J. 1989)

Appendix B

53. Halliburton was traded on the NYSE and, as noted above, did file Forms S-3 with the SEC before and during the Class Period. The NYSE is a New York City-based stock exchange. During the Class Period, the NYSE was the largest equities marketplace in the world as measured by dollar volume. During 1999 to 2001, there were 2,798 to 3,025 companies listed on the NYSE. As of December 31, 2001, the combined capitalization of all NYSE listed companies was $16 trillion.

54. The NYSE is an agency auction market where most trading is conducted by brokers acting on behalf of customers, rather than by dealers trading for their own account. Competitive price discovery at the point of sale results from this broker interaction. Aided by NYSE-assigned brokers known as specialists, the NYSE marketplace provides all customer orders an equal opportunity to interact and receive the best price.[33]

55. NYSE's Letter to Our Constituents at page two of its 2002 Annual Report notes that "investors must be guaranteed a fair and level playing field." At page 21, it discusses market quality and states that "Investors enjoy fast, reliable and efficient access to unsurpassed liquidity, the narrowest spreads anywhere, and the best possible execution."[34] NYSE's Chief Regulatory Officer states in his letter to investors in NYSE's 2004 Annual Report that the exchange is "committed to do everything in our power to protect investors and ensure that the New

33. www.nyse.com

34. http://www.nyse.com/pdfs/2002ar_NYSE-2002.pdf

York Exchange remains the fairest, most open securities market in the world."[35]

56. Available from NYSE is the Trade and Quote ("TAQ") database which provides all reported trades and quotes for all issues traded on all U.S. exchanges, *e.g.*, NYSE, NASDAQ (OTC), and regional exchanges. The TAQ database contains over 1.3 million trades for Halliburton stock during the Class Period; the average number of trades per day was 2,086.

57. The fact that Halliburton traded on a major exchange during the Class Period, supports a conclusion that the market for the stock was efficient during that period.

J. Factor 10: Institutional Ownership and Trading

58. Institutional investors such as pension funds, mutual funds, and investment banks, typically have ready access to minute-to-minute financial news and to online bulletins from analysts such as those disseminated through First Call. They also expend resources in analyzing the value of stocks in which they invest. Thus, the fact of significant institutional ownership is a signal that knowledgeable investors are closely and rapidly scrutinizing sources of company information and forming investment opinions that affect share price accordingly.

---

35. http://www.nyse.com/pdfs/2004editorial.pdf at 7.

Appendix B

59. There was substantial institutional ownership of Halliburton stock throughout the Class Period. According to data provided by Thomson Financial, institutional holdings of Halliburton's stock ranged from a low of 273.5 million shares at the end of the fourth quarter of 2001 to a high of 315 million shares at the end of the third quarter of 2000.[36] (See Exhibit 11.) During the Class Period, institutional ownership of Halliburton stock ranged between 64% and 73% of the Company's reported shares outstanding and the number of institutional investors reported holding Halliburton stock ranged from 416 to 539.

60. During the Class Period, institutional investors actively traded Halliburton stock, as indicated by data from reporting institutions' filings of Form 13F with the SEC. Changes in institutional holdings of Halliburton shares from quarter-end to quarter-end for quarters falling in whole or in part within the Class Period, are substantial. This indicates institutions were actively trading Halliburton stock. (See Exhibit 12.) Institutional investors, reporting at each quarter-end, increased their holdings of Halliburton shares during the Class Period by at least 20 million (during the quarter ended September 30, 1999) and by as much as 53 million shares (during the quarter ended December 31, 2000). Thus, a substantial number of shares changed hands among the institutional investors throughout the Class Period.

---

36. Institutions which file Form 13F with the SEC report shares held as of the end of each calendar quarter.

61. The presence and trading activity of institutional investors in the market for Halliburton's stock during the Class Period support a conclusion that the market for the stock was efficient during that period.

K. Factor 11: Dissemination of News

62. Coverage of a company by wire services, financial press, and general media ensures that investors have ready access to new information about a company's condition and prospects, and facilitates rapid share price reaction to new information about the company. There was extensive news coverage of Halliburton during the Class Period, including reports on Halliburton's financial condition, its prospects for growth, and its revenues and earnings trends.

63. Prior to, during, and after the Class Period, articles concerning Halliburton appeared in major news media in the United States, such as: *AP Online; Associated Press Newswires; Barron's; Business Week; Business Wire; Capital Markets Report; CCN Newswire; Chicago Tribune; CNBC: Business Center; Companies & Commodities; Corporate Financing Week; Daily Petroleum Report; Defense Daily International; Denver Post; Dow Jones Business News; Dow Jones Capital Markets Report; Dow Jones Energy Service; Dow Jones News Service; Factiva Press Release Service; Financial Disclosure Wire; Financial Times; Houston Chronicle; Knight Ridder Tribune Business News; Los Angeles Times; Money Magazine; Moody's Investor Service Press Release; New York Daily News; New York Post; Newsday;*

Oil & Gas Investor; Oil & Gas Journal; Petroleum Economist; Petroleum Finance Week; Pipeline & Gas Journal; PR Newswire; Reuters News; The Accountant; The Atlanta Constitution; The Baltimore Sun; The Boston Globe; The Christian Science Monitor; The Daily Telegraph; The Economist; The New York Times; The Oil and Gas Journal; The Philadelphia Inquirer; The San Francisco Chronicle; The Wall Street Journal; The Washington Post; and *U.S. Newswire.* During the Class Period, more than 12,100 electronic and/or printed articles were published with "Halliburton" mentioned in the article; more than 2,900 were published with "Halliburton" appearing in the headline or first paragraph.[37]

64. In addition, Halliburton held regular conference calls with members of the investment community. After each quarter's earnings announcement was released, the Company held a conference call at which management described Halliburton's financial performance and condition, answered questions from participants, and often provided guidance on expected future financial performance. During the Class Period, Halliburton management also occasionally held conference calls to discuss new business developments and other pertinent information.

65. The extensive news coverage of Halliburton within the Class Period supports my conclusion that the market for Halliburton stock was efficient during the Class Period.

---

37. Source: www.factiva.com (from Dow Jones)

Appendix B

VII. Summary Regarding the Market Efficiency of Halliburton's Stock

66. In summary, the following indicia of market efficiency are bases for my opinion that the market for Halliburton stock was efficient throughout the Class Period:

- the considerable trading volume in Halliburton stock during the Class Period;
- the significant number of securities analysts who reported on Halliburton;
- the fact that trading in Halliburton stock was facilitated by a specialist on the NYSE, a sophisticated and developed principal exchange;
- the Company's eligibility for and filing of SEC Form S-3 prior to and during the Class Period;
- the demonstrable relationships between company-specific news releases and prompt share price reactions;
- Halliburton's large market capitalization;
- Halliburton's bid/ask spreads comparable to other companies in its industry;
- Halliburton's sizeable public float;

- the fact that Halliburton traded on a major exchange;

- significant institutional ownership during the Class Period; and

- the extent of news coverage of Halliburton available to investors.

67. The fact of market efficiency does not preclude the information about Halliburton disseminated to the market by Defendants from being false and misleading. Rather, it means that information disseminated by Defendants about Halliburton and its prospects, whether true or false, was reflected in Halliburton's share price.

VIII. Materiality

68. Material information is any information that investors would want to know about a company that might affect their investment decisions with respect to that company,[38] or information that can reasonably be expected to affect the value of that company's securities. Material information may concern the market as a whole, the industry in which a company operates, or specifically the company (company-specific information). Clearly, material information includes information concerning a company's current revenues, expenses, and earnings. Market participants also may rely upon expected

38. *Basic, Inc. v. Levinson*, 485 U.S. 224, 231 (1988) (quoting *TSC Indus.*, 426 U.S. at 449).

future revenues, expenses, and earnings, information on accounting policies and procedures, reserves and estimates, in addition to demand for a firm's products and services, information concerning a firm's ability to compete and the effects of competition, information on management's effectiveness in managing the enterprise, and many other items of information which may affect market participants' evaluations of a firm's revenue and earnings prospects.

69. Share price is a function of a company's expected future economic earnings, *i.e.*, of expected future cash flow to shareholders. Cash flow to shareholders is that cash flow on which there are no other claims—not from suppliers, creditors, employees, government in the form of taxes, or from others—and hence is a return to equity investors for their investment and the risk they have borne. This cash flow can be distributed to equity investors as dividends or special distributions and/or as appreciation in share price realized at sale of the stock. In other words, a firm's share price is the present value of future economic earnings expected by its equity investors, discounted for risk and the time value of money.[39]

70. Market participants rely on statements made by company managers and representatives. Market participants also rely on the opinions of a company's independent auditors for assurance that the company's financial statements accurately and reliably report its

39. Richard A. Brealey and Steward C. Myers, *Principles of Corporate Finance*. 7th edition, c2003, pp. 60-61.

financial performance. Unless the market has reason to believe a company's future financial performance will be significantly different from its present financial performance, the market will look to the company's periodic reports of financial performance as important indicators of its financial health and earnings prospects. For example, a company's financial reports provide the level of revenues from which market participants project future growth.

71. If market expectations for a company's future economic earnings change, the company's share price will change. If the level of earnings used in projections or the expected growth rate of future economic earnings increases, share price increases; if the level of earnings for the market's projection or expected growth rate decreases, share price decreases.

72. The statements of a company's management and of its external auditors are particularly important in shaping the market's information mix because management and auditors have special access to and control of information about earnings, prospects for growth, and conditions within the company. For example, analysts participate in conference calls, report on conversations with management, and summarize a company's financial statements in analyst reports. The mix of information in the market about a firm is rarely, if ever, uniform, and the mix often includes some diversity in forecasts for financial performance. The market assimilates all the information available to arrive at an equilibrium price. Unless the general market recognizes notable defects in

management's and auditors' credibility, their statements will weigh heavily in establishing that equilibrium price.

73. It must be noted that a statistically significant change in a company's security's price (net of market and industry effects) is an indicator that new company-specific information has dramatically changed the total mix of information about a company, but is itself not the only indicator of materiality. A security price movement of any size can be material. Statistical significance measures the relative size of the security's price adjustment to the new information, *i.e.*, statistical significance only indicates that the price change was among the largest price changes over a period of time. Information that does not cause a very large price adjustment, *i.e.*, one that is not statistically significant, also can be material. Price changes are caused by information; the market is not a collection of whimsical expressions of an irrational force. Price changes may appear random because new information arrives randomly, *i.e.*, we cannot predict the future. Nevertheless, those price changes have causes. Information "important enough to affect security prices when publicly released provides compelling evidence that a reasonable investor would consider the information important in making an investment decision."[40]

74. Stock prices reflect publicly available information and this is the economic theory underlying an event study. Certain of the case-relevant events from an event

40. Mitchell, Mark L. and Jeffry M. Netter, "The Role of Financial Economics in Securities Fraud Cases: Applications at the Securities and Exchange Commission," *The Business Lawyer*, 49, 545.

study are discussed in Sections V.E. (addressing *Cammer* factor 5) and IX. (addressing Loss Causation) of this Report. A partial disclosure is corrective with respect to alleged misrepresentations and omissions when that disclosure changes the mix of fraud-related information available to investors. Specifically, if a company makes an announcement that misrepresents some aspect of its business or omits information that should not have been omitted and later the company "corrects" the misrepresentation (or omission), even though it did not admit its earlier misrepresentation (or omission), then that is a partial disclosure. Thus, a partial disclosure can be new information regarding the true condition or prospects of a company that has the effect of correcting the prior misrepresentation (or omission) even when the company does not admit to the fraud. Though the company may portray the information as new to the company, it would be a partial disclosure if it was, in fact, information previously known to the company but misrepresented to the market.

75. An example will illustrate. A company reports overstated revenues over several quarters. Analysts and investors, relying on those overstated revenues, make assessments about the company's revenue-generating capabilities, and assess the value of the company's stock.[41] Later, the company reports revenues that are below investors' expectations (those expectations based on the prior revenue overstatements) and the stock price falls.

---

41. In this case, it is alleged that each time Halliburton released earnings, such earnings were overstated because they failed to disclose that the earnings included unapproved claims that Halliburton had erroneously recognized as revenues on its large fixed-price construction contracts .

The fraud is not that the company reported disappointing revenues in the later quarter and the stock price fell in that quarter, the fraud is that the company hid its disappointing revenues in earlier quarters, when the stock price would have declined had the company reported its revenues accurately. If the company had earlier reported its revenues appropriately, then analysts and investors would have had correct information upon which to make their assessments regarding the value of the company's stock, which would have resulted in the stock price decline earlier rather than later. The fraud is not that the stock price declined but that the stock price declined *later* than it would have if correct financial information had been reported. The corrective disclosure has a direct causal link to the alleged misrepresentations even though the company had not admitted to prior misrepresentations or to fraud. Furthermore, it may be the case that the company, while reporting disappointing revenues in the later quarter, may still be overstating its revenues such that the price inflation[42] from the initial misrepresentations is reduced but it is not eliminated.

IX. Loss Causation

76. The above section of this Report titled "Materiality" explains that investors use disclosures about the financial performance and condition of a company to make assessments about future cash flows that will accrue to investors in a firm's securities, and that investors use this information in valuing those securities. This section

42. Price inflation refers to that portion of the price of a share of stock in excess of its true value, *i.e.*, the difference between a reported stock price and its price had the fraud not occurred.

on "Loss Causation" describes certain disclosures by the Company that Lead Plaintiff intends to prove at trial corrected false or misleading information, or that revealed information that was wrongly omitted, regarding Halliburton's financial performance, earnings prospects, and potential asbestos liability; such disclosures caused the prices of Halliburton's stock to decline.

77. Certain announcements during the Class Period, while they did not admit the alleged fraud at that time, are partial disclosures of information that changed investors' perceptions of the true value of Halliburton. Lead Plaintiff alleges that had Halliburton's financial statements not been false and misleading during the Class Period, investors would have lower and more realistic expectations regarding Halliburton's earnings and revenue generating capabilities during the Class Period. Thus, information during the Class Period that partially corrected investors' previously erroneous perceptions as to Halliburton's value are partial disclosures of the alleged fraud.

78. This analysis is ongoing. This analysis does not attempt to illustrate all of the misrepresentations or partial disclosures of the fraud through the end of the Class Period. In the future, I may consider additional and/or different dates as partial disclosures of the alleged fraud based on additional analyses, materials, further discovery, and/or the opinions of other experts in this matter.

79. This "Loss Causation" section is based on, and summarizes the results of, an event study analysis based

on widely accepted statistical techniques and a review of information releases of many kinds relevant to Halliburton and issued during the Class Period. Information releases include news articles and wire service reports, reports of securities analysts, and Company press releases, conference calls, interviews and presentations, and SEC filings. The event study enables me to identify news during the Class Period—both related to Halliburton's partial disclosures concerning its potential asbestos liability, its booking of unapproved claims on fixed-price contracts and the lack of benefits from the Dresser merger, and other unrelated news—which led to a significant change in Halliburton's share price. This event study demonstrates that during the Class Period the prices of Halliburton's stock reacted to material, new, and unexpected information.

80. Regression analysis is used to show how a company's stock price moves in relation to market and industry movements and how it responds to news and information. The regression analysis I performed is able to explain 77% of the total variance in Halliburton's stock return during the control period. This is a very high correlation for this type of regression analysis; in my experience, market and industry indices returns generally explain less than 50% of the variation in a particular company's stock returns. (See Section V.E. and the Appendix to this Report for additional information regarding the event study.)

81. Similar to the methods I commonly employ when conducting an analysis of damages in securities cases such as this, I have conducted the following analyses to

determine the effect the disclosures of the alleged fraud (discussed below) had on Halliburton's stock price.

- Conducted an econometric analysis of the company's stock returns, *i.e.*, regression analysis in order to separate the portion of the return caused by company specific news and events from the portion of the return caused by market and/or industry news and events.

- Reviewed all of the news surrounding the day on which the alleged disclosure was made to determine what the company said and what market participants said.

- From the regression analysis, determined how much of the day's stock return can be attributed to company-specific news and events, and how much of the day's stock return can be attributed to market and industry news and events.

- Reviewed all of the available analyst reports surrounding the day on which the alleged disclosure was made to determine how the company's statements or communications impacted market participants' assessments of the company's value. Analyst reports provide information on what the company said if the company's statements were made outside of a press release, *e.g.*, conference call.

- Conducted an empirical analysis of the information on and surrounding the disclosure date. Based on commentary by the company, news articles,

and statements from analysts, determined what specific news items were important on the day of the alleged disclosure or on the days surrounding the day of the alleged disclosure, *e.g.*, the particular disclosure to which news articles attributed stock price movements; reasons in analyst reports for changes in estimates, ratings or target prices; commentary by the company with respect to what it noted was important.

- Conducted an empirical analysis to determine the relative importance of different pieces of news with respect to impact on stock valuation, *i.e.*, how different pieces of news impacted the stock price, examined contemporaneous assessments (both qualitative and quantitative) as to the impact on value. For example, reasons underlying the company's changes to its guidance, estimates and forecasts, and reasons underlying all or parts of analysts' changes to their valuation models, estimates, ratings, and target prices.

A. Summary of Events Related to the Misrepresentations, and the Effect on the Price of Halliburton's Stock

82. Following is a discussion of certain disclosures during the Class Period which revealed that previous alleged representations and omissions by Defendants had been false and misleading, causing the prices of Halliburton's stock to decline. (See Exhibit 13 for a chart of Halliburton's stock price and a summary of the events related to the disclosures.)

Appendix B

Partial Disclosures Related to Booking of Unapproved Claims and Unrealized Benefits from the Dresser Merger:

83. The following events are examples of information disclosed during the Class Period that brought, in part, investors' perceptions of the Company's financial condition related to its booking of unapproved claims on fixed-price contracts and the benefits from the Dresser merger more in-line with its alleged true condition at that time. My analysis has identified at least four instances of partial disclosures related to these allegations; these disclosures caused a total company-specific decline in Halliburton's stock price of as much as 21.8%, or $9.42 (other non-culpable information was disclosed on one of these days, January 5, 2000, although, as discussed, below, a significant portion of the information on that day related to the Company's booking of unapproved claims on fixed-price contracts and the lack of benefits from the Dresser merger).

84. *October 5, 1999*: On October 5, 1999, Halliburton's stock price dropped 13.2%, from $39.75 to $34.50. The company-specific return is -9.0%, a statistically significant negative return. After market close, on Monday, October 4, 1999, Halliburton announced that Dresser had elected to sell its interests in two joint ventures.[43] The Company also warned that it expected its 1999 third-quarter earnings to be in the range of 11 to 13 cents per diluted share. The previous average analyst estimates was 19

43. Halliburton held an invitation-only conference call with analysts. *Dow Jones Business News*, "Halliburton Sells Stakes In Joint Ventures For $1.1 Billion," October 4, 1999, 7:43 pm.

cents per share. The Company attributed the reduction, in large part, to the lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group.[44] This is an instance where the Company released negative news, which concerned the lack of benefits arising from the Dresser merger.

> [Halliburton] shares could slip in Tuesday morning trading due to its earnings warning. The oil driller said that its Dresser Equipment Group business segment and its Engineering and Construction business segment are warning of lower profits. As a result, Halliburton expects a third quarter profit between 11 and 13 cents a share, while analysts currently expect a profit of 19 cents a share. Halliburton also announced that its subsidiary Dresser Industries will sell its interests in two joint ventures to Igersoll-Rand *[sic]* Co. for a total of $1.1 billion. The sales will result in a one-time fourth-quarter gain of 84 cents a share. Shares closed down 2 1/16 to 39 3/4 ahead of the news.[45]

85. News commentary and analysts attributed the decline in Halliburton's stock price that day to

---

44. *Reuters News*, "Halliburton to Exit Two Ventures, Sees Lower Q3 EPS," October 4, 1999, 5:23 pm.; Halliburton SEC Form 8-K filed October 4, 1999.

45. *CBS MarketWatch. com*, "Earnings Advisories," October 4, 1999, 6:11 pm.

the reduction in the Company's near-term expected earnings:[46]

> Shares of Halliburton Co. plunged 13.2 percent Tuesday after the company said its Dresser Industries unit will sell its stake in two joint ventures to Ingersoll-Rand for $1.1 billion, after poor performance by the businesses hurt third quarter results.
>
> Dresser Industries decided to sell the interests amid the Dresser Equipment Group segment's poor current and projected financial performance at D-R and at IDP. D-R is expected to report an operating loss in the third-quarter while the entire business segment forecasts weaker operating results, compared to previous predictions, for the third and fourth quarters.
>
> Analysts appear to agree that Halliburton's sale of the poor-performing joint ventures was a good move and that the earnings shortfall will be temporary.
>
> In a research note, analyst James Stone of Schroders said Halliburton's move is "a better-than-expected outcome" for the company and even though "it will negatively affect earnings

46. *See, e.g.*, Dain Rauscher Wessels, "Halliburton Selling Joint-Venture Interests; Expects To Miss Previous Third-Quarter Guidance," October 5, 1999; *Dow Jones Business News*, "Earnings Warning Pressures Shares Of Oil-Services Firm Halliburton," October 5, 1999, 11 :26 am.

in the fourth quarter and for at least part of 2000, it is a much better scenario than having bought out Ingersoll-Rand."

Stone reduced his third-quarter earnings-per-share estimate to 12 cents from 21 cents, but noted that the sale's impact on the company is short-term and will ultimately be to Halliburton's advantage.

Additionally, Arvind Sanger, analyst at Donaldson, Lufkin & Jenrette downgraded his third-quarter estimate to 12 cents a share from 18 cents, fourth quarter earnings-per-share estimate to 18 cents from 28 cents. However, in his research note, he maintained a "buy" rating on the company's stock, viewing the sales as "a good strategic move."[47]

86. Analysts lowered their forecasts after the Company's earnings warning. For example:

CIBC:

We have revised our estimates for 3Q and 4Q99 to $0.12 and $0.18 from $0.18 and $0.25, respectively. We are preliminarily raising our 2000 and 2001 estimates to $1.56 and $2.15 from

47. *CBS MarketWatch.com*, "Halliburton to sell interests in two joint ventures; issues third-quarter earnings warning," October 5, 1999, 8:06 pm.

$1.49 and $2.08, respectively. We reiterate our Buy rating and 12- to 18-month price target of $56.

The sale of the joint-venture interest comes as a major surprise to Wall Street, which assumed [Halliburton] wanted to own the compressor and pump businesses. ... Reducing financial leverage and creating potentially accretive earnings transactions made the sale decision mandatory, from the point of view of shareholder value creation.

The company's announcement of weakness across virtually every business line in 3Q is not surprising, given the slower than anticipated oilfield industry recovery. [Halliburton] is merely the latest company to confess to this situation.

We believe a significant disconnect exists between oilfield service stock prices and improving industry fundamentals. ...[48]

Dain Rauscher Wessels:

HAL announced that third-quarter EPS would come in $0.06-$0.07 less than expected and attributed the entire shortfall to the disappointing performance of the two joint ventures.

---

48. CIBC World Markets, October 5, 1999.

Appendix B

> We are lowering our third-quarter EPS estimate to $0.12 from $0.21, our 1999 estimate to $0.66 from $0.85, and our 2000 estimate to $1.14 from $1.39. We are maintaining our Neutral rating.[49]

Jefferies & Company:

> Lowering Estimates—We are lowering our 3Q99 EPS estimate to $0.12 from $0.23 to reflect the weak operational environment in HAL's Dresser Equipment Group and its downstream Engineering and Construction segment. In addition, we are lowering our 1999 EPS estimate to $0.65 from $0.85 and our 2000 EPS estimate to $1.05 from $1.50 to reflect the sale of its Dresser-Rand and Ingersoll-Dresser Pump divisions and the adjusted outlook for other divisions.[50]

87. I have reviewed all of the news and analysts reports from October 5, 1999, that are available to me at this time; I do not see other news or information that can explain the company-specific stock price decline on October 5 other than the reduction in the Company's near-term expected earnings. The reductions in earnings estimates are based

---

49. Dain Rauscher Wessels, "Halliburton Selling Joint-Venture Interests; Expects To Miss Previous Third-Quarter Guidance," October 5, 1999.

50. Jefferies & Company, Inc., "Stock Collapses On Profit Warning; Underperforming Assets To Be Sold," October 5, 1999.

at least in part on lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group. Lead Plaintiff alleges that during the Class Period Defendants misrepresented the integration of Dresser's construction operation, and the benefits the merger would have to Halliburton's bottom line, and the operational problems at the Company's engineering and construction units.[51] Thus, a significant portion of the stock price decline on October 5, 1999, was caused by information that partially corrected prior misstatements and omissions regarding the Dresser merger and the Company's related operational problems.

88. *January 5, 2000*: On Wednesday, January 5, 2000, Halliburton made a partial disclosure related to the Company's booking of unapproved claims on fixed-price contracts and the lack of benefits realized from the Dresser merger as revealed in a conversation with analyst Carol Lau with Brown Brothers Harriman & Co. On this day, which included both culpable and non-culpable news, there was a statistically significant decline in Halliburton's share price. Halliburton's stock price dropped 4.38% from $38.50 to $36.81. The company-specific return was negative 4.3% that day. Following this conversation with Halliburton, Lau reduced her 2000 EPS estimates.[52] Year 2000 estimates were reduced by 20 cents (from $1.10 to $0.90), related to the following segments:

---

51. Fourth Consolidated Amended Complaint for Violation of the Securities Exchange Act of 1934, filed April 4, 2006 (the "Complaint"), pp. 1-2 .

52. Brown Brothers Harriman & Co., January 5, 2000, 2:02 pm.

Appendix B

Operating Segment	Reduction to EPS:
Energy Services	$0.13
Engineering and Construction	$0.06
Dresser Equipment	$0.01
Total	$0.20

89. On the same day, Merrill Lynch analyst K. Simpson ("Simpson") cut his estimates of Halliburton's earnings for 2000 and 2001, and downgraded the Company's intermediate-term rating on the stock to "Accumulate" from "Buy," while retaining the long-term "Buy" rating. Simpson attributed the cut to "reduced expectations for offshore construction results, a reduced growth estimate for oilfield spending outside North America and 'less powerful synergies from the Dresser merger than [h]e had envisioned.'"[53] His earnings per share estimates were cut to $0.85 from $1.15 for 2000 and to $1.50 from $1.90 for 2001. I do not have Simpson's breakout of his reduction of 2000 and 2001 earnings estimates between the segments; however, the reasons Simpson cites for cutting his rating for Halliburton are—except for his concerns about oilfield spending—related to Halliburton's alleged misstatements and omissions—specifically those concerning revenues and profitability from large fixed-price construction contracts and the benefits of the Dresser merger. The news article that reported on Simpson's change to estimates and rating noted that in the first half hour of trading the stock was down $1.4375, to $37.0625.

---

53. *Reuters News*, "Research Alert—Halliburton Estimates Cut," January 5, 2000, 9:59 am.

Appendix B

90. Industry-wide disclosures are captured by the industry index and are not reflected in the company-specific returns. Oilfield spending was an industry-wide concern for oil services companies that day. Thus, while the disclosure related to industry oilfield spending is non-culpable it is unlikely to be a contributing factor to the significant company-specific decline in Halliburton's stock price that day. For example, the impact of spending by major oil companies on the industry was discussed that day in a *Dow Jones Business News* article:

> ... [I]ndustry observers say oil-services giants such as Halliburton Co. (HAL), Baker Hughes Inc. (BHI) and Schlumberger Ltd. (SLB) will report fourth-quarter results substantially below a year earlier. Oil-services, or oil-field, companies provide equipment, such as drilling rigs and services, to search for and produce oil and gas. ...
>
> Overall, analysts said, the oil-services group should show substantial declines from fourth quarter 1998 because the most notable oil-industry trend of 1999—rising crude prices—has yet to spur major increases in production and exploration. This spending by major oil companies is the oil-services group's bread and butter. ...
>
> "You're starting to see some increases in spending [by oil companies], but it's still very

conservative," said Poe Fratt of A.G. Edwards & Sons Inc.[54]

91. CIBC World Markets also discussed oilfield spending that day:

> The oilfield service industry is driven by the need for oil and gas companies to develop new reserves and increase their current deliverability to satisfy the world's growing energy demand.
>
> The bottom of the industry cycle occurred in either 3Q99 or 4Q99, depending on whether a company's business is primarily North America, or internationally, oriented.
>
> We anticipate this cyclical uptrend to strengthen as 2000 unfolds. With increased oilfield activity, given the downsizing within the service companies, revenue and profit margins should experience a healthy recovery this year and into 2001, driving EPS growth. ...
>
> Our strategy for investing in this industry recovery has been, and remains, to focus on the largest-cap service companies such as Schlumberger (SLB-$67 target price),

54. *Dow Jones Business News*, "Oil-Service Firms' 4th-Quarter Results May Signal Start Of A Recovery," January 5, 2000, 9:15 am.

> Halliburton (HAL-$56 target price), and Baker Hughes (BHI-$41 target price), because that is where we believe investors' money will flow initially during the early stage of the upturn.[55]

92. I have reviewed all of the news and analysts reports from January 4-6, 2000, that are available to me at this time; I do not see other news or information that can explain the company-specific stock price decline on January 5 other than the reductions to earnings estimates made by the two analysts after, at least in the case of Lau, a conversation with Halliburton management. The reductions in earnings estimates are based at least in part on the problems with the large fixed-price contracts and the lack of benefits from the Dresser merger. Lead Plaintiff alleges that had Halliburton not included in its operating income in certain quarters of 1998, 1999 and 2000 unapproved claims revenue, in contrast to its earlier accounting policies, investors would have been on notice with respect to the unsatisfactory profitability of the certain large fixed-price contracts.[56] Thus, a significant portion of the stock price decline on January 5, 2000 was caused by information that partially corrected investors' erroneous assessments of the profitability of overseas construction projects and the benefits of the Dresser merger. This is the type of information that would affect stock prices because it relates to value and is used, at least by analysts, in models to assess the value of Halliburton's stock.

---

55. CIBC World Markets, "Oilfield Svc & Offshore Drilling; Oilfield Services Investment Thesis," January 5, 2000.

56. Complaint, pp. 140-141.

Appendix B

93. *October 24-25, 2000*: After market close on October 24, 2000, while announcing its third quarter earnings release, the Company made a partial disclosure concerning the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger. Specifically, it disclosed that it would be restructuring its engineering and construction units, causing a statistically significant decline on October 25 of 11.0% in Halliburton's stock price from $41.63 down to $37.06 (the company-specific decline was 6.6%; this was a statistically significant decline). Trading volume was 25.35 million shares that day, more than 7 times the average daily trading volume for Halliburton stock during the Class Period.[57] The price decline on October 25, 2000, was caused by revelations related to operational problems at the engineering and construction units and, to a lesser extent, some analysts' concerns regarding potential asbestos exposure. This is an instance where the Company released negative news concerning operational problems at its engineering and construction units. Analysts revised their forecasts as a result of the negative news discussed on October 24 and 25, 2000. A significant portion of the negative news, as attributed to the Company, in news reports and by analysts, was related to the problems with the engineering and construction units that Lead Plaintiff alleges could have been and should have been revealed earlier. Thus, a significant portion of the stock price decline on October 25, 2000 was related to the Company's booking unapproved claims on fixed-price contracts and

57. The average daily trading volume for Halliburton stock during the Class Period was 3.46 million shares.

lack of benefits from the Dresser merger alleged in the Complaint.

94. According to the Complaint, Halliburton's then-Chairman and chief executive David Lesar ("Lesar") leaked information regarding the Company's "serious operational problems in Halliburton's construction business ... and that a new major restructuring/reorganization ... was necessary" to certain analysts in "early" October 2000.[58] The Complaint cites a Salomon Smith Barney report released October 25, 2000, which states:

> During the conference call, management indicated their desire to merge [Brown & Root Energy Services] with its construction peers in [Engineering and Construction] and rationalize the entire business. This confirms the message we heard from management several weeks ago during our company visit.[59]

95. The subsequent restructuring charge taken in fourth quarter (as revealed later in the December 22, 2000 partial disclosure) was predominantly due to the delays and cost overruns of Halliburton's large fixed-price construction projects. According to news reports, Lesar said on October 24 or 25, 2000, that:

---

58. Complaint, p. 101.

59. Salomon Smith Barney, "HAL: 3Q in line; E&C Outlook weak; Trimming Estimates," October 25, 2000.

> [T]he engineering and construction units have been hurt because customers have been slow to move ahead with major construction projects and that profits have been unsatisfactory.
>
> . . .Kellogg Brown & Roots profits have been adequate so far because that unit has been working through a backlog of projects.
>
> However, its profit margins will erode as it finishes projects and customers continue to delay decisions on major new construction.[60]

Lead Plaintiff alleges that during the Class Period had Halliburton not included unapproved claims in its construction units' revenues, or disclosed that it had included unapproved claims in its financial reporting for its construction units, investors would have been on notice of those units' reduced profitability or that reported profits might not be realized if customers failed to pay the unapproved claims, with subsequent charges for cost overruns as a result.

96. The announcement by the Company on October 24 prompted certain analysts to cut earnings forecasts based on the partial disclosures related to the large fixed-price construction contracts.[61] Some analysts mention other

60. *Knight Ridder Tribune Business News*, "Dallas-Based Halliburton Co. to Combine Engineering, Construction Units," October 25, 2000.

61. The charges for cost overruns that were announced in December 2000 make clear that the problems in the engineering

negative news but the overwhelming consensus behind all downgrades is the problems at Halliburton's Engineering and Construction unit and the restructuring related to same.

> Shares of oil-services firm Halliburton Co. slumped Wednesday after the company announced a restructuring of its engineering and construction units. ...
>
> ING Barings lowered its rating on the stock from "buy" to "hold," Southwest Securities downgraded from "buy" to "accumulate," and Dain Rauscher Wessels said that because of "too many uncertainties" in the non-oilfield units investors should focus on purely oil-service stocks.
>
> In trading Wednesday morning, Halliburton shares were down $5.13, or more than 12 percent, to $37.06. ...
>
> The company made the announcement while releasing its third-quarter results. Halliburton said excluding one-time items, it earned $109 million, or 24 cents per share, a penny better than expected by analysts surveyed by First

---

and construction were related to the large, fixed-price contracts and, therefore, the negative news on October 24 and 25, 2000, is a partial disclosure related to the Company's booking unapproved claims on fixed-price contracts and the lack of benefits from the Dresser merger alleged in the Complaint.

Call/Thomson Financial. Revenue was $3 billion.[62]

97. Several analyst reports were released on October 25. Merrill Lynch analyst Kevin Simpson said he had cut his estimate of Halliburton's 2001 earnings per share to $1.30 from $1.50 due to problems with the Company's construction segment, but was maintaining an accumulate rating on the stock. "The engineering and construction side of the business is turning much more slowly than they had expected and than I had expected," he said.[63]

98. Also, "ING Barings analyst Stephen Gengaro lowered his rating on Halliburton's stock to hold from buy rating and his 2001 earnings estimate to $1.50 from $1.80, citing weakness in the engineering and construction business and, to a lesser extent, outstanding asbestos liability claims against the company."[64]

99. Analyst James K. Wicklund with Dain Rauscher Wessels released a report that day that stated that Halliburton's third-quarter EPS beat expectations, but "[m]ore interestingly, the company announced a major restructuring of its Engineering and Construction Group which continues to show disappointing results."

---

62. *Associated Press Newswires*, "Halliburton stock slides on news of restructuring, slowing projects," October 25, 2000, 12:24 pm.

63. *Reuters News*, "Update 2-Halliburton stock hit by engineering slowdown," October 25, 2000, 4:26 pm.

64. *Ibid.*

He reduced his fourth-quarter estimates to "reflect the increasing weakness in the engineering and construction business and the slower-than-expected increase in international activity." He stated:

> We applaud the company's attempt to improve the results of the ECG [construction segment] and believe that the ESG [oilfield services segment] is well positioned to benefit from the continued oilfield services cyclical recovery with strong market positions in several products/ services segments. However, we believe there are too many uncertainties regarding the recovery in the non-oilfield service businesses. We recommend investor's focus on pure-play oilfield service stocks that are more highly leveraged to the continued cyclical recovery. We continue to rate the stock Neutral.[65]

100. Analyst Allen Brooks with CIBC stated in his report that day:

We are maintaining our Buy rating but reducing our price target to $50 from $56...

> The shock in the conference call was management's statement that, given the outlook for customer spending in the shallow water marine construction market and the

---

65. Dain Rauscher Wessels, "Halliburton Reports: Announces Major Restructuring Initiative," October 25, 2000.

> downstream [Engineering and Construction] business, it is not sure that Halliburton has the critical mass to generate consistent and predictable profitability and profit growth from these sectors. Management believes the stock is being punished for the lack of this predictability. Therefore, it will look to a significant restructuring of these businesses with an eye to achieving this goal during 2001.[66]

101. Analyst Fratt with A.G. Edwards & Sons, Inc. stated that Halliburton's EPS was ahead of expectations "due to strong North American drilling market," but that the "near-term outlook [was] less robust." Fratt lowered his estimates for the Company to "reflect weaker [Engineering and Construction] business," concluding that the "[r]estructuring is positive and oilfield service recovery continues." Fratt reiterated his "Accumulate/ Aggressive" rating for the Company.[67]

102. Analyst Asit K. Sen with ABN AMRO stated:

> Strong performance from the oil field services business ... were essentially offset by weaker results from the Engineering and Construction (E&C) business. ... The company indicated that

---

66. CIBC, "Weak E&C Outlook Prompts Restructuring; Reducing Estimates," October 25, 2000.

67. A.G. Edwards & Sons, Inc., "North America Drives Positive Earnings Surprise—Lowering Estimates to Reflect Weaker E&C Business," October 25, 2000.

> it is embarking on a strategic restructuring program to improve results from the E&C business that we view positively. ... We are lowering our 2000 EPS estimate to $0.55 (from $0.58) and 2001 estimate to $1.35 (from $1.50).[68]

103. As clearly illustrated above, each analyst cites the problems within Halliburton's construction segment as the cause for downgrades and concerns. Indeed, most analysts discuss positive news for the Company's oilfield services segment, which would be positively reflected in the stock's returns, strengthening my opinion that the decline in the stock price was due to the partial disclosure related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger.

104. I have reviewed all of the analyst reports available to me at this time. The following table summarizes their adjustments to earnings following the Company's third quarter 2000 earnings release and conference call with management.

---

68. ABN AMRO, "HAL: Lowering 2000 and 2001 Earnings Estimates," October 25, 2000. Later that day, Sen issued another report where he lowered his 2001 EPS estimate even further to $1.15. AMRO, "HAL: Bruised But Not Broken—Sensitivity Analysis," October 25, 2000.

Analyst	Prior 2001 EPS	New 2001 EPS	Reason for change
ABN-AMRO	$1.50	$1.15	Continued weakness in E&C business, both upstream (BRES) and downstream (KBR) services. Change in 2001 estimates for operating income from previous earnings model: Prior: / New: ES $1,029 million / $929 million E&C $207 million / $76.5 million More than 50% of the reduction in estimated operating earnings for 2001 comes from E&C.
A. G. Edwards & Sons	$1.55	$1.35	More conservative operating assumptions for the E&C business.

CIBC	$1.71	$1.50	Weakness in E&C business. Change in 2001 estimates for operating income from previous earnings model: Prior: / New: ES: $1,046.2 million / $1,029.2 million E&C: $203.5 million / $80.0 million Dresser: $174.2 million / $164.8 million More than 80% of the reduction in estimated operating earnings for 2001 comes from E&C.

Dain Rauscher Wessels	$1.57	$1.42	Increasing weakness in E&C business and slower-than-expected increase in international activity. Change in 2001 estimates for operating income from previous earnings model: Prior: / New: ES: $ 987.4 million / $988.9 million E&C: $189.4 million / $90.0 million Other income: -$86.4 million / -$98.5 million Other income is interest expense/income. More than 80% of the reduction in estimated operating earnings for 2001 comes from E&C.
Jefferies & Co.	$1.65	$1.65	No change
Salomon Smith Barney	$1.45	$1.10	"Largely" due to weak E&C outlook

Appendix B

105. For the three analysts that provide detailed earnings models, 50% to 80% (a significant portion) of the reduction in estimates for 2001 operating income is from the engineering and construction business (E&C).[69] This is the type of information that would affect stock prices because it relates to value and is used directly by, for example, analysts in models to assess the value of Halliburton's stock. I have reviewed all of the news and reports from October 24 and 25, 2000, that are available to me at this time and find that the negative news and sentiment is predominately about the operational problems, delays and cost overruns for large construction projects.[70] Thus, a significant portion, if not all, of the significant price decline on October 25 was caused by the partial disclosures related to the operational problems at the engineering and construction units and is related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger that are alleged by Lead Plaintiff.

106. *December 21-22, 2000*: On Thursday, December 21, 2000, Halliburton pre-announced fourth-quarter earnings and formally unveiled the restructuring of its engineering and construction units. The press release

---

69. Various studies have demonstrated that earnings surprises, i.e., when earnings are lower or higher than expected, have an impact on stock prices. Thus, it has been empirically demonstrated that changes in earnings and earnings expectations can and do affect stock prices.

70. It is my understanding that to date there has been no discovery that would identify specifically what projects were affected.

stated that it planned to take a charge of $120 million in the fourth quarter, the bulk of which was due to cost overruns at several overseas projects.[71] This is an instance where the Company released negative news, all of which appears to be related to cost overruns on the fixed-price contracts at its engineering and construction units. Lead Plaintiff alleges that information related to cost overruns on overseas projects could have been and should have been disclosed earlier.

> [Halliburton will] record[] approximately $120 million after tax charges in the fourth quarter related to restructuring and charges on projects of the engineering and construction businesses. Both Brown & Root Energy Services and Kellogg Brown & Root are impacted by the charges and reorganization.
>
> The portion of the charges related to reorganization costs is expected to be approximately $25 million after tax and primarily relate to severance costs associated with a reduction in the number of senior management positions and costs to exit several facilities no longer required, while the remaining charges primarily relate to project specific matters.

---

71. Aftermarket close, on January 30, 2001, Halliburton released its fourth-quarter 2000 earnings results in which the Company increased the $120 million charge announced December 21 to $193 million (of which, $157 million was attributed to project losses).

> During the quarter, several large fixed fee engineering and construction projects, including two projects where Kellogg Brown & Root participates as a member of a construction joint venture, incurred significant additional costs related to projected completion of the projects. Much of the additional costs relate to labor disturbances in Venezuela and West Africa that have significantly affected productivity on the projects. While claims will be made for a large portion of the additional costs, management does not believe that all the claims will be recovered. In addition, negotiations with customers regarding cost increases on seven other projects have not resulted in resolution of certain claims as originally anticipated.[72]

107. In general, analysts were surprised by the charges related to the cost overruns.

> Halliburton said approximately $25 million of the charge will cover costs of the restructuring, which analysts said could foreshadow spinning off the engineering and construction units into a separate company. But the bulk of the charge, about $95 million, was related to delays and cost overruns. The company blamed some on labor problems in Venezuela and West Africa and said it will make claims to recoup the money.

---

72. *PR Newswire*, "Halliburton Announces New Structure and Engineering and Construction Charges," December 21, 2000, 8:59 am.

It is also negotiating, so far unsuccessfully, to recover extra costs on seven other projects.

The Dallas-based company had hinted about the restructuring two months ago, but the cost overruns caught observers off-guard.

"There are nine projects (with overruns). That points more to a problem with the bidding process," said Jim Wicklund, an analyst with Dain Rauscher Wessels who rates Halliburton stock "neutral."

Allen Brooks, an analyst with CIBC World Markets Corp., attributed the overruns to doing business in places such as Nigeria.

"It was a little bit of a surprise, but I don't raise too high a flag about it," said Brooks.[73]

108. Analysts continued to express concerns on December 22:

Two investment analysts who follow Halliburton expressed some unhappiness about the write-off from cost overruns and higher expenses, which came as a surprise to them.

"I knew there would be charges," said Fred A. Mutalibov with Southwest Securities Inc. in

---

73. *Associated Press*, "Halliburton to split into two divisions," December 21, 2000, 5:31 pm.

Dallas. "But one of the problems with the big companies like Baker Hughes, Halliburton and Schlumberger within my industry is that what are called one-time or non-recurring charges keep coming again and again."

Jim Wicklund, analyst with Dain Rauscher Wessels in Dallas, said excluding the charges makes it difficult for investors to compare Halliburton's earnings from quarter to quarter. It isn't the first time Halliburton has written off cost overruns on projects, he said.

"This is $95 million in charges where they had significant cost overruns and seven projects that they had cost increases that they haven't been able to pass along. With no offense meant toward Halliburton, that's a lack of good contingency consideration," he said.

Halliburton shares, after trading off as much as $1.31, closed down 75 cents to $37 Thursday on the New York Stock Exchange.

Guy Marcus, Halliburton's vice president of investor relations, declined to identify the projects or customers with which Halliburton has incurred the higher costs.

Halliburton said "several large fixed-fee" projects, including two where its Kellogg Brown & Root unit is part of a construction

> joint venture, "incurred significant additional costs" coming up to completion.
>
> It said "labor disturbances" in Venezuela and West Africa "have significantly affected productivity on the projects."
>
> "While claims will be made for a large portion of the additional costs, management does not believe that all the claims will be recovered," Halliburton said.
>
> The company also said that on seven other projects, it has been unable to resolve claims over cost increases as it had first anticipated.[74]

109. Although the stock fell 2.0% on December 21, this was not a statistically significant return. On December 22, 2000, Halliburton's stock price declined 2.7%, down from $37.00 to close at $36.00. The company-specific return that day is negative 3.9%, a statistically significant decline (although the industry was down that day, the overall market was up more than 3.0%). The price reactions on December 21 and 22 are consistent with the charge for cost overruns at various projects that was a surprise to the market.

110. Several analysts issued reports on December 21 and 22 in response to the Company's announcement.

---

74. *Texas*, "Dallas-Based Oil Services Firm Halliburton to Take $120 Million Charge," December 22, 2000.

Appendix B

A.G. Edwards & Sons:

Although these project adjustments will undoubtedly have a positive impact on [Engineering and Construction] profitability in 2001-2, the extent of the adjustments is much wider than previously thought, in our view, and is evidence that execution problems have also had a negative impact on [Engineering and Construction] operating results. With the restructuring and project adjustments, we believe that [Halliburton's] [Engineering and Construction] business should be on track to meet its 3% margin goal in 2001 and generate closer to 5% margins in the future. We point out that the [Engineering and Construction] backlog has improved slightly since the end of 3Q2000 and additional activity should materialize as integrated oil companies increase capital spending in 2001.[75]

CIBC:

The struggling [Engineering and Construction] division has been a drag on [Halliburton's] stock performance. Based on our 2001 EPS estimates, [Halliburton] currently trades at a 35% valuation discount to other major oil services companies. Although part of this discrepancy

75. AG Edwards & Sons, Inc. "E&C Business Restructuring Formally Announced—4Q2000 EPS ON Track," December 21, 2000.

> is warranted due to the weak performance of the [Engineering and Construction] business, we believe [Halliburton] can narrow the valuation gap with a successful reorganization. Additionally, the strength of the recovery in the oilfield service industry should also enhance stock price appreciation.[76]

111. Of the $120 million special charge announced by Defendants, $95 million (or 79%) is related directly to the misrepresentations of cost overruns alleged by Plaintiffs. The remaining $25 million is related to the restructuring necessitated by the severe operational problems arising from the failed Dresser merger and cost overruns for large fixed-price construction contracts, and does not appear to have been a surprise or a concern to analysts as some charge was expected after the Company announced the restructuring plan in its third quarter earnings conference call.

112. Halliburton's stock price reaction that day is consistent with the charge for cost overruns at various projects being a surprise and a concern to the market. I have reviewed all of the news and analysts reports available to me at this time from December 21 and 22, 2000, and find that the negative news and sentiment is predominately about the operational problems, delays and cost overruns for large construction projects. As there was no other negative news released that day, all

---

76. CIBC, "4Q Outlook In Line With Prior Guidance, Restructuring Charge Announced," December 21, 2000.

of the price decline on December 22 was caused by the partial disclosures related to the operational problems at the engineering and construction units and is related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged by Lead Plaintiff.

113. My conclusions with respect to the causes of significant portions of the company-specific price declines in Halliburton stock on October 5, 1999, January 5, October 25 and December 21-22, 2000, are based on statements made by the Company and by analysts (that are for the most part attributed to or based on communications from the Company). I reserve the right to revise my conclusions if, based on discovery, additional information would cause me to alter my conclusions.

Partial Disclosures Related to the Company's Exposure to Asbestos Litigation:

114. Lead Plaintiff alleges that Defendants "intentionally concealed and affirmatively misrepresented the true significance of Halliburton's exposure to asbestos liabilities in Halliburton's financial statements, [SEC] filings, press releases and communications with analysts and investors."[77] The following events are examples of information disclosed during the Class Period that corrected, in part, these misrepresentations, in that they brought investors' perceptions of the Company's exposure to asbestos liability more in-line with its alleged

77. Complaint, pp. 23-24.

true exposure at that time. My analysis has identified at least four instances of partial disclosures related to these allegations; these disclosures caused a total company-specific decline in Halliburton's stock price of as much as 56%, or $16.19.

115. *June 29, 2001*: On June 28, after market close, Halliburton made a partial disclosure related to the asbestos claims. This is an instance where the Company released negative news, all of which concerned the asbestos claims. It announced that Harbison had requested the Company's financial assistance with asbestos claims Harbison agreed to assume in 1992 after it was spun off from Dresser. Dresser had agreed to handle asbestos claims filed prior to the split, and Harbison agreed to handle asbestos claims filed afterward. Dresser was named as a defendant in the claims, and the companies were in effect co-insured. The Company stated that:

> Based on the information it has developed to date and its own experience in managing asbestos claims, Halliburton believes that if such a decision is made it would require an additional reserve for estimated known claims at June 30, 2001, net of insurance recoveries, of approximately $50 to $60 million, after-tax.

Halliburton stated that it had "substantial interest" in resolving the claims, and that this development exposed the Company, net of insurance recoveries, to a worst case asbestos liability cost of $60 million.[78]

---

78. *PR Newswire*, "Harbison-Walker Asks Halliburton For Asbestos Claims," 4:45 pm, June 28, 2001.

116. This disclosure caused a statistically significant decline in Halliburton's share price. On Friday, June 29, 2001, Halliburton's stock price declined 4.22%, down from $37.17 to close at $35.60. The company-specific return that day is negative 4.6%.

117. Certain analysts expressed some concern over the Company's potential exposure to asbestos liability and its impact on Halliburton's stock price, which is reflected in the decline in the stock price. For example, on June 29, Goldman Sachs removed Halliburton from its list of top recommendations, citing anticipated pressure on the Company's stock price due to this asbestos related disclosure:

> Analyst Terry Darling ["Darling"] wrote in a report, "Although [Halliburton's] operating performance is improving (second quarter upside surprise likely) and it's unlikely that this event substantially increases [Halliburton's] financial risk from asbestos liabilities, we believe the incremental uncertainty created by this new development is likely to place further pressure on [Halliburton] shares.[79]

CNBC discussed the Goldman Sachs downgrade:

> [Halliburton] was downgraded today by Goldman Sachs. The bottom line from Goldman is that Goldman says the company has issues with w—asbestos [*sic*] liabilities. That's going

79. *Reuters News*, "Research Alert-Goldman cuts Halliburton from recommended list," June 29, 2001, 8:04 am.

> to be a problem, even though the fundamentals appear to be improving for Halliburton. The firm is taking the stock off of its recommend list. They make it a market performer on the heels of the company, saying it may assume asbestos liabilities of Harbison Walker, which was spun off by Dresser Industries as Indresco back in 1992.[80]

The reasons cited by Darling for removing the Company from its recommendation list are related to Halliburton's misstatements—specifically the misstatements concerning the significance of Halliburton's exposure to asbestos liabilities.

118. I have reviewed all of the news and analysts reports surrounding June 29, 2001, that are available to me at this time; I do not see other news or information that can explain the company-specific stock price decline on June 29, 2001, other than the asbestos-related disclosure. The stock price decline on June 29 was caused by information that partially corrected investors' erroneous assessments Halliburton's asbestos liability. Lead Plaintiff alleges that this is the type of information that could have been and should have been disclosed earlier.

119. *August 9, 2001*: On August 9, 2001, Halliburton filed Form 10-Q with the SEC, in which it increased its accrued net liability for known open asbestos claims to $124 million (from $60 million on June 28, 2001, $30 million on March 31, 2001, and $29 million on Dec. 31, 2000). This

---

80. *CNBC Squawk Box*, "Newscast: Squawk Box, 9:30 AM; today's business news," June 29, 2001.

is an instance where the Company released negative news, all of which concerned its potential asbestos liability. This disclosure caused a statistically significant decline in Halliburton's share price. That day Halliburton's stock price declined 4.48%, down from $33.50 to close at $32.00. The company-specific return that day is negative 5.2%, a statistically significant decline. This disclosure is related to Halliburton's misstatements and omissions—specifically those concerning the significance of Halliburton's exposure to asbestos liabilities.

120. The decline in Halliburton's stock price on August 9, 2001, was attributed to the information released in the 10-Q related to the Company's asbestos liability:

> Halliburton Co, the world's No. 1 oilfield services firm, saw its stock fall 4.5 percent on Thursday after the company released information showing a sharp increase in its asbestos litigation liability.
>
> Dallas-based Halliburton, headed until August 2000 by U.S. Vice President Dick Cheney, said it estimated its net liability for open asbestos claims against current and former Halliburton subsidiaries at $124 million as of June 30, 2001, up from $30 million on March 31, 2001 and $29 million on Dec. 31, 2000.
>
> The information, contained in a 10-Q filing with the Securities and Exchange Commission (SEC), hit Halliburton's stock which closed $1.50 lower at $32.

> "When you look at the growth in claims and you look at these numbers, we're concerned," said Scott Gill, an analyst with Houston-based energy investment bank Simmons & Co.
>
> Gill said the information about the asbestos claims—which date back to the 1970s—was far more detailed than the company had made in 10-Q statements in previous quarters.[81]

121. I have reviewed all of the news and analysts reports surrounding August 9, 2001, that are available to me at this time; I do not see other news or information that can explain the company-specific stock price decline on August 9, 2001, other than the asbestos-related disclosure. The stock price decline on August 9 was caused by information that partially corrected investors' prior erroneous assessments Halliburton's asbestos liability. Lead Plaintiff alleges that this is the type of information that could have been and should have been disclosed earlier.

122. *October 31-November 1, 2001*: After market close, on Tuesday, October 30, 2001, Halliburton announced that on October 26, 2001, a jury in Mississippi found Dresser (through Harbison) liable in two of six asbestos cases for total compensatory damages of $21.3 million ($10.7 million per plaintiff). The case was against three companies, and the total verdict was $150 million. This

---

81. *Reuters News*, "Halliburton stock down as asbestos liability rises," August 9, 2001, 7:12 pm.

verdict had not yet been affirmed and a judgment had not yet been entered against the Company. The Company stated that it would "file post trial motions and vigorously appeal if the verdict is not set aside."[82] This is an instance where the Company released negative news, all of which related to Halliburton's misstatements—specifically the misstatements concerning the significance of Halliburton's exposure to asbestos liabilities. This disclosure caused a statistically significant decline in Halliburton's share price. On October 31, 2001, Halliburton's stock price declined 6.3%, down from $26.35 to close at $24.69. The company-specific return that day is negative 4.9%, a statistically significant decline. The Company's stock continued to decline 2.88% on November 1, 2001, to close at $23.98. The company-specific decline is 3.7%, a statistically significant decline because the market was up that day.

123. One analyst was surprised by the size of the award, and expected the news to have a negative impact on the Company's stock price:

> Six plaintiffs were each awarded $25 million and Dresser (through the Harbison-Walker (H-W) subsidiary) was found liable in two of the six cases for total compensatory damages of $21.25 million ($10.675 million per plaintiff). Potential 4Q2001E impact is small: $5mil or $3mil tax effected = less than $0.01/share hit. If appeal is unsuccessful, reserves could move up sharply.

---

82. *PR Newswire*, "Halliburton Disputes Asbestos Claims," October 30, 2001, 8:05 pm.

> This jury award sets new precedents; the size of award is enormous ....
>
> Size of jury award was unexpected and is likely to have a negative impact on stock price tomorrow. We expect a vigorous defense by [Halliburton's] and remain optimistic that the asbestos liability will remain under control. Given the significant discount relative to its peer group, we believe that [Halliburton's] current stock price adequately discounts potential asbestos liability risk.[83]

124. I have reviewed all of the news and analysts reports surrounding the October 30 disclosure that are available to me at this time; I do not see other news or information that can explain the company-specific stock price decline on October 31 and November 1, 2001, other than the Company's asbestos-related disclosure on October 30. Lead Plaintiff alleges that this is the type of information that could have been and should have been disclosed earlier.

125. *December 4-7, 2001*: During the period December 4 through December 7, 2001, Halliburton disclosed recent

---

83. A.G. Edwards, "Asbestos Case in Small Mississippi Town Yields $150 Million Jury Award Against HAL, MMM and Others—Vigorous Appeal Expected," October 31, 2001.

adverse asbestos jury verdicts in Form 8-K SEC filings and there was substantial discussion in the news and by analysts related to Halliburton's potential asbestos exposure. This is an instance where the Company released several pieces of negative news, all of which were concerning the asbestos claims. These disclosures caused statistically significant declines in Halliburton's share price.

126. On Tuesday, December 4, the Company filed Form 8-K with the SEC, in which it disclosed that a Texas District Court had entered a judgment against Dresser on a $65 million jury verdict rendered in September 2001.[84] In the same filing, the Company disclosed that the same district court also entered three additional judgments against Dresser in favor of 100 other asbestos plaintiffs in the aggregate amount of $35.7 million related to an alleged breach of a purported settlement agreement. The Company stated that it intended to appeal the three judgments "on the grounds that it wasn't a party to the settlement agreements and that it didn't authorize anyone to settle on its behalf. The company said it believes its appeal will be successful."[85]

127. On December 3, 2001, Halliburton's stock price closed at $22.06. On December 4, Halliburton's stock price

---

84. This verdict was known to the public before December 4. For example, an analyst for Salomon Smith Barney referred to this verdict in his November 9, 2001 report.

85. *Dow Jones Corporate Filings Alert*, "Texas Court Enters $65M Verdict Against Halliburton," December 4, 2001, 8:45 am.

declined 0.73%. This is a statistically significant negative return because both the market and the industry were up that day. On December 5, Halliburton's stock price increased 0.46%, which also is a statistically significant negative return because both the market and the industry were up that day. On December 6, the stock declined 5.23%. This is not a statistically significant return because both the market and the industry were down that day. Halliburton closed at $20.85 on December 6.

128. On the morning of December 7, 2001, the Company filed Form 8-K with the SEC disclosing that on December 5 a Maryland jury had awarded a $30 million verdict against Dresser in favor of five plaintiffs in an asbestos litigation. The Company stated that it intended to "aggressively" appeal the verdict:

> The company said it believes the trial court committed numerous errors and that the evidence didn't support the verdict, according to the filing. The company intends to challenge the verdicts by post trial motion and, if those motions aren't successful, to pursue an appeal "aggressively."[86]

129. Several analysts issued reports that day in response to the Company's SEC filing. Analyst Geoff Kieburtz with Salomon Smith Barney downgraded his rating for Halliburton (to 3H from 1 M) and dropped his price target to $20 from $36 citing mounting asbestos liabilities:

---

86. *Dow Jones Corporate Filings Alert*, "Jury Returns $30M Verdict against Halliburton Subsidiary," 8:17 am.

> This verdict comes on the heels of a $21 million Mississippi jury verdict, a $65 million judgment in Orange, Texas, and an additional $36 million, representing a settlement previously negotiated by Harbison-Walker. All of these cases pertain to Harbison-Walker, a former subsidiary. The company has indicated that in all cases that it believes the trial courts have committed numerous errors, and that it expects to prevail on appeal. While the stock heavily discounts Halliburton's asbestos exposure, the specter of lawsuits spiraling out of control is likely to adversely impact the stock for the foreseeable future, and thus we cannot recommend it at this time.[87]

130. Analyst Sen with Jefferies & Co. put his rating for Halliburton under review citing uncertainty regarding the asbestos litigations and near-term earnings risk:

> We have remained cautious on Halliburton for two main reasons: 1) uncertainty surrounding ongoing asbestos litigation, and 2) near-term earnings risk. ... These [asbestos related disclosures] are surprising developments following management's rather positive asbestos update during its 3Q01 conference call on October 23. During the conference call management had provided further assurances

87. Salomon Smith Barney, "HAL: Downgrading on Mounting Asbestos Liabilities," December 7, 2001.

> that current reserves are adequate to cover projected asbestos liabilities. We now believe that [Halliburton's] asbestos-related net liabilities could be significantly higher than currently estimated (estimated at $125 million by the company). We continue to remain cautious on the stock. Our rating is under review (with a negative bias) pending further update from management on asbestos.[88]

131. UBS Warburg analyst, James Stone, downgraded his rating for Halliburton to "Hold" from "Strong Buy" and reduced his 12-month target price to $24 from $38:

> While we do not anticipate that every claim filed against Halliburton will end up in court, in fact the vast majority of claims should continue to be settled at or near the company's historical settlement rates. Nevertheless, if only 1% of cases resulted in jury verdicts of a similar magnitude and the awards were upheld at the appellate level, the future liability would be significantly greater than our previous expectations.[89]

132. On December 7, 2001, Halliburton's stock price declined 42.4%, down from $20.85 to close at $12.00.

---

88. Jefferies, "Halliburton: Update On Asbestos Litigation; Stay Cautious," December 7, 2001.

89. UBS Warburg, "Halliburton: Downgraded to Hold from Strong Buy," December 7, 2001.

The company-specific return that day is negative 42.7%, a statistically significant decline. Trading volume was almost 77 million shares that day, more than 22 times the average daily trading volume for Halliburton stock during the Class Period. Several news articles attributed the decline in Halliburton's stock price on December 7 to the recent asbestos disclosures.[90] I have reviewed all of the news and analysts reports surrounding December 4-7, 2001, that are available to me at this time; I do not see other news or information that can explain the company-specific stock price declines during December 4-7, 2001, other than the asbestos-related disclosures. The cause of the large decline in Halliburton's stock price on December 7 was directly related to the disclosures regarding its asbestos exposure and subsequent market assessments at to the possible financial consequences to the Company of that asbestos exposure. Lead Plaintiff alleges that this is the type of information that could have been and should have been disclosed earlier.

B. Summary of the Decline in Halliburton's Stock Price during the Class Period

133. The total decline in Halliburton's stock price was 72.0% from the start of the Class Period through December 7, 2001: from June 3, 1999, (the closing price was $42.88) to December 7, 2001 (the closing price was $12.00). (See Exhibit 14.) As can be seen in Exhibit 14, during the same period, Halliburton's industry rose 14.2% (from

---

90. *See, e.g., The Wall Street Journal*, "Halliburton Stock Falls Nearly 43% After Recent Asbestos Verdicts," December 10, 2001.

$10.50 to $12.00) and the market fell 6.2% (from $12.80 to $12.00). (In Exhibit 14, the market and industry indices are indexed to $12.00 on December 7, 2001.[91]) Thus, the full decline in Halliburton's stock price during the Class Period cannot be attributed to the decline in the market or to the increase in the industry. Moreover, Lead Plaintiff does not allege that Halliburton's stock price should not have declined; Lead Plaintiff contends that Halliburton's stock price would have declined earlier had Halliburton's financial results been reported correctly and accurately and Defendants had correctly characterized Halliburton's potential asbestos liabilities.

134. My analysis shows that the partial disclosures related to the accounting and asbestos claims made by Halliburton during the Class Period caused the price of Halliburton to decline. Specifically, the partial disclosures related to its undisclosed losses from large fixed-price construction contracts and unrealized benefits from the acquisition of Dresser, caused a decline in Halliburton's stock price on October 5, 1999, January 5, 2000, October 25, 2000 and December 22, 2000. The partial disclosures related to Halliburton's asbestos liability caused a decline in Halliburton's stock price on June 29, 2001, August 9, 2001, October 31, 2001, November 1, 2001, December 4, 5 and 7, 2001. If Halliburton had timely reported its

---

91. The value of Halliburton stock was $12.00 after at least several partial disclosures. It would be misleading to use Halliburton's stock price at the start of the Class Period as the point at which to anchor the market and industry indices because Lead Plaintiff alleges that if the stock price would have been at its true value, but for the alleged fraud, it would have been much lower.

operational problems and the full extent of its exposure to asbestos liability, the decline in the value of Halliburton stock that occurred during the Class Period would have occurred earlier when Lead Plaintiff alleges that Halliburton should have reported its operational problems and the full extent of its exposure to asbestos liability.

Jane D. Nettesheim

Appendix B

Appendix to Report of Jane D. Nettesheim: Regression Analysis and Event Study

1. I used regression analysis to determine the dates on which Halliburton's daily stock price returns are significantly different from the returns which would have been expected based on the returns on a market index and on an industry index of companies comparable to or competitors of Halliburton, and on the correlation of Halliburton's returns with market and industry returns.[1]

2. Regression analysis is a statistical tool commonly used by economists to estimate the relationships between two or more variables. In this case, the regression analysis is used to measure the relationship between the Halliburton stock returns and (1) changes in market-wide factors that would be expected to impact all stocks and (2) changes in industry-wide factors that would be expected to impact all stocks in a particular industry. By measuring how the stock returns of Halliburton move in relation to an overall market index and an industry index, I can also measure how it responds to news.

3. A period of time over which to estimate the regression equation, a control period, must be selected. It is important to select a control period that is representative of the Company during the Class Period. It also is important to select a control period with as little impact as possible from the fraud in determining

1. A daily return is the percentage change in Halliburton's closing share price from its closing share price on the previous trading day.

the normalized relationship between a company's stock returns and the returns on a market index and an industry index.[2] In this case, I used a control period from October 1, 1998 through September 30, 1999. This is a one-year period that begins shortly after the Dresser Merger, and overlaps approximately the first four months of the Class Period. The control period is typically a one-year period that occurs prior to the start of the Class Period. However, in this case, the control period must start after the Dresser Merger in order to reflect the stock price of the combined companies. The regression equation from the control period explains the expected variation in the Halliburton stock returns based on changes in the market and industry. The explained variation is measured by the square of the correlation coefficient, or r^2,[3] and the regression equation is statistically significant, as

---

2. *See, e.g.*, Cornell, Bradford and R. Gregory Morgan, "Using Finance Theory to Measure Damages in Fraud on the Market Cases," *UCLA Law Review*, 37 (June 1990) 883, p. 898.

3. The correlation coefficient, r, is a dimensionless index that ranges from -1.0 to 1.0 inclusive and reflects the extent of a linear relationship between two data sets. The r-squared value can be interpreted as the proportion of the variance in the dependent variable attributable to the variance in the independent variables and ranges from 0 to 1.0. In this case, the dependent variable is Halliburton stock returns and independent variables are market index returns and industry index residual returns. The r-squared value measures the percentage of the total variance in Halliburton's stock return that is explained by the market and industry index returns. The r^2 is 77% for this regression; in these types of regressions, the usual range is from 0.10 to 0.50.

measured by the F-statistic.[4] The regression analysis and regression equation are provided in Exhibit 15.

4. The market index is a market capitalization weighted composite of all stocks traded on the NYSE, American Stock Exchange ("Amex"), and NASDAQ (the NYSE/Amex/NASDAQ composite index, or "NAN"). This broad-based market index is commonly used by economists as a representation of the market and the data are provided by CRSP.[5]

5. Many companies were considered for use in an industry index. Companies considered for the industry index include those that are referred to in analysts' reports as competitors or comparables to Halliburton, and

---

4. The F-statistic is the result of a statistical test to determine whether a significant relationship exists between the dependent variable and the set of independent variables. Here the F-statistic is 415 and is significant at greater than the 99% level of confidence, *i.e.*, there is a greater than 99% probability that there is a statistically significant relationship between Halliburton stock returns and returns on the market and industry indices.

5. CRSP is the Center for Research in Securities Prices at the Graduate School of Business, University of Chicago.

constituents in certain Halliburton industry indices.[6] [7] A list of companies considered for, and those included in, the industry index is provided in Exhibit 16.

6. First, the daily stock returns for each company considered for the industry index were regressed on the market index returns during the control period, October 1, 1998 to September 30, 1999. The residual returns[8] from each of these regression equations were calculated. Halliburton stock's daily returns then were regressed as a dependent variable against the residual returns from each of these regressions as the independent variable,

---

6. A company was considered for the industry index if it was listed in at least four of the following indices: Bloomberg Oil & Gas Services Index; Bloomberg United States Oil & Gas Services Index; FactSet's Index of Oil Service and Equipment Companies; Morgan Stanley Oil Services Index; Oil Service HOLDRS Index; Philadelphia Oil Service Sector Index; S&P 150 Super Composite Oil & Gas Equipment & Services Index; Standard and Poor's Supercomposite Energy Equipment & Services Index. A company was considered for the industry index if it was included in an analyst report as comparable to or a competitor to Halliburton.

7. Halliburton did not list specific competitors in its SEC filings: "We conduct business worldwide in over 100 countries. Since the markets for our services and products are vast and cross numerous geographic lines, a meaningful estimate of the number of competitors cannot be made." (Halliburton's SEC Form 10-K for 2001).

8. The residual return is the difference between the actual return on each day and the day's expected return calculated from a regression equation and is a measure of the portion of each daily return not explained by changes in the market index.

to determine whether they were significantly correlated (*i.e.*, to determine whether after excluding market effects each company's daily residual returns helped to explain the daily returns on Halliburton stock). Those companies whose daily residual returns are significantly and positively correlated with Halliburton stock's daily returns are included in the index.[9]

7. The industry index is formed from the returns of each of the companies whose residual returns are statistically correlated with Halliburton stock returns. The individual companies weighting in the industry index are according to their market capitalization. The industry index is regressed on the market index and the residual returns of the industry index are used in the final regression analysis.

8. Finally, daily Halliburton stock returns are regressed on daily market index returns and daily residual industry index returns for the control period. Halliburton stock's daily returns are statistically significantly correlated with the daily returns of both the market and industry indices, as indicated by the t-statistics for each index in Exhibit 15. The result of this regression is the

---

9. Statistical significance is measured by the t-statistic of the regression coefficient of the residual returns of the competitor or comparable company in the regression equation. If the t-statistic is greater than 1.98, there is a 95% probability that the regression coefficient is not equal to zero, *i.e.*, it is not a spurious result, and that Halliburton stock returns are correlated with the residual returns of the competitor or comparable company. The 95% level of confidence is a measure frequently employed by economists to determine statistical significance.

regression equation that is used to estimate expected Halliburton stock returns; the results of the regression analysis and the regression equation appear in Exhibit 15.

9. Expected Halliburton stock returns are those changes in Halliburton stock prices due to market and industry factors, *i.e.*, stock prices can and do change when new information or valuation assessments can potentially change the values of all stocks in an economy (market effects) or in a particular industry (industry effects). On each day of the Class Period, the expected returns for Halliburton stock are calculated from the regression equation. The formula demonstrating how expected returns are calculated is shown on Exhibit 17. On each day of the Class Period, the difference between the actual Halliburton stock return and its expected return is a measure of the change in the stock price due to company-specific events.[10] Company-specific events include any news, analyst coverage, oral commentary, or other information that changes market participants' perceptions about the value of a company.

---

10. The measure of significance is the z-statistic and is equal to: (actual return — expected return) / standard error. The standard error of the prediction measures the relative volatility of Halliburton stock returns compared to the predicted returns on Halliburton stock. The larger the standard error, the greater the residual return must be in order to be considered statistically different from its predicted return. If the z-statistic is greater than or equal to 1.96 or less than or equal to -1.96, the difference between the two returns is significantly difference from zero at the 95% level of confidence, *i.e.*, there is a 95% probability that the difference between the actual return and expected return is not equal to zero.

Appendix B

10. An event study is used to disentangle the effects of company-specific information from market and industry information—in other words, to determine whether news affecting Halliburton promptly caused a measurable share price reaction after accounting for general market and industry effects. An event study as applied to litigation has been described as:

> The execution of an event study is quite simple. It involves the identification of an event that causes investors to change their expectations about the value of a firm. The investigator compares a stock price movement contemporaneous with the event to the expected stock price movement if the event had not taken place. There are three basic steps in conducting an events study: (i) define the event window; (ii) calculate abnormal stock price performance around the event; and (iii) test for statistical significance of the abnormal stock price performance. ...
>
> For those events that are subject to leakage, defining the beginning of the event window can be problematic. ... Ideally, the first day of the event window corresponding to a[n event] would be the date on which investors began trading on news about the upcoming [event], regardless of whether the news was based on rumors, inside information, a Schedule 13D filing, or a public announcement [about the event]. In practice, this date is difficult to define and some degree of judgment is required generally based on

price and volume movements prior to the [event] announcement.

... [I]n many securities fraud cases the relevant information is revealed slowly over time, while during the same period investors receive other, sometimes unrelated, information about the firm(s) in question. In the latter case, it is relatively difficult to choose an appropriate window. The main advice is to carefully identify the exact dates during which the information is in question reached the market, and then restrict the window to a short period, if possible, generally two or three days around each release of new information. ...

In general, a test of significance aims to answer the question of whether an observed difference is real or simply occurred by chance.

... An often used convention is the five percent rule—[z-statistics] greater than or equal to 1.96 standard deviations from the mean value are considered significantly different from the typical value because there is only a five percent chance that a randomly selected value will be 1.96 or more standard deviations from the true mean. ... The decision rule may be more stringent. For example, ... a one percent likelihood ... if the z-statistic is greater than or equal to 2.58 ... A third commonly used decision rule is ten percent ... a randomly selected value

> will lie 1.65 standard deviation or more from the mean value. Generally, researchers use a decision rule based on one percent, five percent, or ten percent significance levels.
>
> ... the finding that the associated stock return is large enough to be statistically significant implies the information is material.[11]

11. The event study is provided as Exhibit 18. Exhibit 18 shows each day during the Class Period with the day's closing stock price, volume, stock return, titles of news articles,[12] indication of SEC filings, and titles of analyst reports. Based on the event study, I identified a total of 31 days with statistically significant stock price returns during the Class—Period—seven with statistically significant positive returns and 24 days with statistically significant negative returns. A discussion of the news and analysis from these dates follows.

12. *June 18, 1999*: On Friday, June 18, 1999, Halliburton's stock price declined 3.7% to close at $45.88. The company-specific decline is 4.1%, a statistically

---

11. Mitchell, Mark L. and Jeffry M. Netter, "The Role of Financial Economics in Securities Fraud Cases: Applications at the Securities and Exchange Commission," *The Business Lawyer*, 49, 545.

12. Headlines were obtained from www.factiva.com. The entire articles are publicly available and are not included in Exhibit 18 in order to reduce the length of Exhibit 18. This Exhibit includes only those articles where "Halliburton" is mentioned in the title or lead paragraph.

significant decline.[13] There was no company-specific news on that day to explain the movement of the stock. However, on the following trading day, Monday, June 21, there was news that oil inventories were high and that this could put pressure on oil prices and, therefore, on values of oil companies and oil services companies.

13. On Monday, June 21, Halliburton's stock price continued to decline another 4.5% (the company-specific decline is not a significant decline because the industry was down that day). Monday's decline in the stock prices of oil companies and oil services companies was attributed to "the perception that recent price gains were at odds with current supply fundamentals:"

> Oil shares slipped as oil prices fell and as investors worried over second-quarter profits after a Wall Street analyst cut second-quarter earnings estimates for Exxon Corp. and Chevron Corp. ... Last week, the American Petroleum Institute (API) reported a 4.4-million-barrel increase in U.S. crude stocks, which pushed inventories to a two-month high of 337.3 million barrels.
>
> One Midwestern oil trader said the trading community thinks there is still too much oil around to justify the current high prices.

---

13. The company-specific return is the stock return net of the expected return based on market index and industry index returns.

Appendix B

> Oil prices peaked at $19.05 on May 5 and then fell as low as $16.21 on June 1. Crude oil has since climbed back up, but last week, it started slipping down again after the most recent weekly buildup in crude stocks and, as refiners, plagued by low margins, adopted economic cuts in production runs.
>
> The shares of oil companies followed oil future contract prices lower, especially after ABN AMRO Inc. analyst Eugene Nowak said he cut second-quarter earnings estimates for Exxon and Chevron, due to poor refining conditions.
>
> Oil-service stocks that lost ground Monday included Halliburton Co., down $2.0625 to $43.8125; Kerr McGee Corp., down $1.50 to $49.9375, and Schlumberger Ltd., down $1.4375 to $63.[14]

Halliburton stock price declines on June 18 and 21, 1999 are consistent with reported concerns related to declines in oil prices.

14. *October 5, 1999*: After market close, on Monday, October 4, 1999, Halliburton announced that Dresser had elected to sell its interests in two joint ventures.[15]

---

14. *Reuters News*, "Oil prices retreat, dragging share prices down," June 21, 1999, 6:36 pm. (Times listed herein are Eastern Time.)

15. Halliburton held an invitation-only conference call with analysts. *Dow Jones Business News*, "Halliburton Sells Stakes In Joint Ventures For $1.1 Billion," October 4, 1999, 7:43 pm.

The Company said it would receive approximately $1.1 billion in cash in the deal. The Company also warned that it expected its 1999 third-quarter earnings to be in the range of 11 to 13 cents per diluted share. The previous average analyst estimates was 19 cents per share. The Company attributed the reduction, in large part, to the lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group.[16]

> [Halliburton] shares could slip in Tuesday morning trading due to its earnings warning. The oil driller said that its Dresser Equipment Group business segment and its Engineering and Construction business segment are warning of lower profits. As a result, Halliburton expects a third quarter profit between 11 and 13 cents a share, while analysts currently expect a profit of 19 cents a share. Halliburton also announced that its subsidiary Dresser Industries will sell its interests in two joint ventures to Igersoll-Rand [*sic*] Co. for a total of $1.1 billion. The sales will result in a one-time fourth-quarter gain of 84 cents a share. Shares closed down 2 1/16 to 39 3/4 ahead of the news.[17]

---

16. *Reuters News*, "Halliburton to Exit Two Ventures, Sees Lower Q3 EPS," October 4, 1999; 5:23 pm.; Halliburton SEC Form 8-K filed October 4, 1999.

17. *CBS MarketWatch.com*, "Earnings Advisories," October 4, 1999, 6:11 pm.

Appendix B

15. On October 5, 1999, Halliburton's stock price dropped 13.2% to $34.50. The company-specific return is -9.0%, a statistically significant negative return. News commentary and analysts attributed the decline in Halliburton's stock price that day to the reduction in the Company's near-term expected earnings.[18]

> Shares of Halliburton Co. plunged 13.2 percent Tuesday after the company said its Dresser Industries unit will sell its stake in two joint ventures to Ingersoll-Rand for $1.1 billion, after poor performance by the businesses hurt third quarter results.
>
> Dresser Industries decided to sell the interests amid the Dresser Equipment Group segment's poor current and projected financial performance at D-R and at IDP. D-R is expected to report an operating loss in the third-quarter while the entire business segment forecasts weaker operating results, compared to previous predictions, for the third and fourth quarters.
>
> Analysts appear to agree that Halliburton's sale of the poor-performing joint ventures was a good move and that the earnings shortfall will be temporary.

---

18. *See, e.g.*, Dain Rauscher Wessels, "Halliburton Selling Joint-Venture Interests; Expects To Miss Previous Third-Quarter Guidance," October 5, 1999; *Dow Jones Business News*, "Earnings Warning Pressures Shares Of Oil-Services Firm Halliburton," October 5, 1999, 11:26 am.

Appendix B

> In a research note, analyst James Stone of Schroders said Halliburton's move is "a better-than-expected outcome" for the company and even though "it will negatively affect earnings in the fourth quarter and for at least part of 2000, it is a much better scenario than having bought out Ingersoll-Rand."
>
> Stone reduced his third-quarter earnings-per-share estimate to 12 cents from 21 cents, but noted that the sale's impact on the company is short-term and will ultimately be to Halliburton's advantage.
>
> Additionally, Arvind Sanger, analyst at Donaldson, Lufkin & Jenrette downgraded his third-quarter estimate to 12 cents a share from 18 cents, fourth-quarter earnings-per-share estimate to 18 cents from 28 cents. However, in his research note, he maintained a "buy" rating on the company's stock, viewing the sales as "a good strategic move."[19]

Analysts lowered their forecasts after the Company's earnings warning. For example:

> *Deutsche Banc Alex. Brown:*
>
> We view the recent announcement by Halliburton that the company will sell its

19. *CBS MarketWatch.com*, "Halliburton to sell interests in two joint ventures; issues third-quarter earnings warning," October 5, 1999, 8:06 pm.

interests in [Dresser-Rand and Ingersoll-Dresser Pumps] as a strategic positive given that oil services will account for an increasing proportion of Halliburton's future earnings. We estimate that the sales of the interests to Ingersoll Rand will be dilutive to Halliburton's estimated 2000 earnings given that projected net cash proceeds of about $630 million will likely be used near term to pay-down the company's short-term debt.

In light of the company's 3Q99 earnings pre-announcement on October 4, we are reducing our 1999 EPS estimate from $0.69 to $0.59 to primarily reflect likely lower Energy Service and Dresser Equipment Group earnings. Of the $98 million (or 15%) reduction in Halliburton's estimated 1999 operating income, about $34 million (or 35%) was attributable to lower Energy Services income (due to lower non-North American rig activities) and $62 million (or 63%) was due to lower estimated Energy Equipment earnings (due to much lower results at D-R and IDP).[20]

CIBC:

We have revised our estimates for 3Q and 4Q99 to $0.12 and $0.18 from $0.18 and $0.25, respectively. We are preliminarily raising our

20. Deutsche Banc Alex. Brown, October 5, 1999.

> 2000 and 2001 estimates to $1.56 and $2.15 from $1.49 and $2.08, respectively. We reiterate our Buy rating and 12- to 18-month price target of $56.
>
> The sale of the joint-venture interest comes as a major surprise to Wall Street, which assumed [Halliburton] wanted to own the compressor and pump businesses. ... Reducing financial leverage and creating potentially accretive earnings transactions made the sale decision mandatory, from the point of view of shareholder value creation.
>
> The company's announcement of weakness across virtually every business line in 3Q is not surprising, given the slower than anticipated oilfield industry recovery. [Halliburton] is merely the latest company to confess to this situation.
>
> We believe a significant disconnect exists between oilfield service stock prices and improving industry fundamentals. ... [21]

16. *October 15, 1999*: On Friday, October 15, 1999, Halliburton's stock price was down 5.78% to close at $34.63. The company-specific return was -3.6%, a statistically significant decline. The stock price continued to decline another 2.17% on Monday, October 18 (this is not

---

21. CIBC World Markets, October 5, 1999.

a statistically significant decline). There was no company-specific news on that day to explain the movement of the stock. On October 18, Schlumberger Ltd., which at that time was world's second biggest oilfield services company (second by revenues to Halliburton), reported third quarter earnings which fell 60 percent compared with the prior year but rose four percent from the previous quarter "as firm oil and gas prices fuelled a modest industry recovery."[22] While Schlumberger's stock rose that day, news commentators noted that "Most other stocks in the same sector closed lower, with the OSX oilfield services index down down [*sic*] 2.43 points at 68.17."[23]

17. *October 27, 1999*: On October 27, 1999, Halliburton's stock price declined 3.4%; the company-specific return was -3.5%, a statistically significant decline. On that day, an analyst at Brown Brothers Harriman lowered her estimates for fourth quarter 1999 and for the year 2000.

> Following the company's third quarter earnings announcement last week, we are making the following adjustments to our earnings estimates: For 1999, we are increasing our full-year estimate by a penny to $0.66 from $0.65 to reflect the $0.02 better-than-expected third quarter results ($0.13 compared to our $0.11 estimate), offset by a $0.01 reduction

22. *Reuters News*, "Schlumberger says Q3 earns fall but worst is over," October 18, 1999, 1:27 pm.

23. *Reuters News*, "FOCUS—Schlumberger says earns fall but worst over," October 18, 1999, 5:12 pm.

to our fourth quarter estimate (to $0.16 from $0.17). For 2000, we are reducing our 2000 EPS estimate to $1.10 from $1.25 to reflect lower earnings contributions from the company's Dresser Equipment Group and, to a lesser extent, lower projections for the Energy Services group. For 2001, we are lowering our forecast modestly to $1.75 from $1.80, reflecting lower earnings at the Dresser Equipment Group. The estimate reductions in the Dresser Equipment Group reflect Halliburton's planned sale of its interests in its two joint ventures (51%-owned Dresser Rand and 49%-owned Ingersoll Dresser Pump); we now forecast operating income of $136 million versus $236 million previously. The estimate reduction in the Energy Services area reflects less aggressive margin assumptions in 2000 (7.6% versus 8.8% previously). In comparison, consensus estimates currently are at $0.16 for fourth-quarter 1999; $1.19 for 2000 and $1.78 for 2001. Despite our estimate reductions, we remain enthusiastic about the recovery and Halliburton's earnings prospects. Consequently, we are reiterating our Buy/Buy ratings on the shares.[24]

18. The small but significant price decline on October 27, 1999 is consistent with the analyst's reduction in estimates while maintaining her Buy ratings.

---

24. Brown Brothers Harriman & Co., "HAL: Reducing Estimates; Maintaining Buy," October 27, 1999.

Appendix B

19. *January 5, 2000*: On Wednesday, January 5, 2000, Merrill Lynch analyst Simpson cut his estimates of Halliburton's earnings for 2000 and 2001, and downgraded the Company's intermediate-term rating on the stock to "Accumulate" from "Buy," while retaining the long-term buy rating. Simpson attributed the cut to "reduced expectations for offshore construction results, a reduced growth estimate for oilfield spending outside North America and 'less powerful synergies from the Dresser merger than he had envisioned.'"[25] Analyst Carol Lau with Brown Brothers Harriman & Co. also reduced her fourth-quarter 1999 and 2000 EPS estimates following a conversation with the company that morning.[26] On January 5, 2000, Halliburton's stock price dropped 4.38% to $36.81. The company-specific return was - 4.3% that day, a statistically significant negative return.

20. *January 10, 2000*: On Monday, January 10, 2000, an analyst at A.G. Edwards reduced his earnings estimates for 2000.[27] Halliburton's stock price was down

---

25. *Reuters News*, "Research Alert—Halliburton Estimates Cut," January 5, 2000, 9:59 am.

26. Brown Brothers Harriman & Co., "HAL: Reducing Estimates; Maintaining Buy Ratings," January 5, 2000.

27. On Friday, January 7, 2000, BJ Services, a major competitor in the pressure pumping business, pre-announced its quarterly earnings, stating earnings would be stronger than expected due to a strong recovery in North American drilling activity. Analysts stated on Monday that they expected that Halliburton would also benefit from the stronger market. On Friday, Halliburton's stock price was up 6.02% (this is not a

4.0% to close at $39.06. The company-specific decline that day is -3.9%, which is a statistically significant decline.

> We believe the sequential improvement that Halliburton has experienced in its ES segment in late 1999 has positive implications for oilfield service activity levels in 2000. We believe that the industry is turning the corner and North America will continue to drive near-term quarterly earnings growth. In the second half of 2000, we expect Halliburton's international ES business and [Engineering and Construction] businesses to add fuel to the recovery. Although major oil companies are increasing upstream budgets, the underlying commodity price assumptions appear very conservative and the year could get off to a slow start. If commodity prices are favorable, which we expect, a positive surprise in the trend in capital spending is likely. Although we expect a pickup in international markets in 2000, it will be heavily weighted toward 2H2000. As a result, we are lowering our 2000 EPS to $1.00 from $1.05.[28]

---

significant increase because both the market and the industry were up that day).

28. A.G. Edwards & Sons, Inc., "North America Continues to Lead—Positive BJS EPS Pre-Announcement," January 10, 2000; SunTrust Robinson Humphrey Capital Markets, "Oil Services Industry—BJS Pre-Release & Positive Implications," January 10, 2000.

Appendix B

21. *January 12, 2000*: On Wednesday, January 12, the Houston Chronicle reported that "Oil-field service companies' earnings are also expected to be a mixed bag. Weatherford International, Smith International, Halliburton and Schlumberger are all projected to earn less in the 1999 fourth quarter than they did the year before."[29] On January 12, Halliburton's stock price was down 6.79% to close at $37.75. The company-specific decline that day is -3.6%; this is a statistically significant decline.

22. On Tuesday, January 11, an analyst with Deutsche Banc Alex. Brown reduced his 2000 and 2001 EPS estimates for Halliburton to $0.94 (from $1.05) and to $2.00 (from $2.15), respectively, "based on a recent conversation with Halliburton management." The reductions were "entirely due to a likely slower earnings recovery at Brown & Root Energy Services (BRES), Halliburton's offshore construction (marine fabrication/installation and pipelay services), subsea services, pipecoating services, and flexible pipe manufacturing division."[30]

23. *February 10, 2000*: On Thursday, February 10, 2000, Halliburton's stock price was down 0.18% to close at $35.44. The company-specific decline is -5.1%, a statistically significant decline. This company-specific decline is driven by the industry and the market, both

---

29. *Houston Chronicle*, "How energy industry fared / Oil profits reveal mixed results / Major integrated companies best at riding out energy cycles," January 12, 2000.

30. Deutsche Banc Alex. Brown, "Halliburton—Reducing 2000/01 EPS Estimates," January 11, 2001.

of which were up that day.[31] There is no other company-specific information at this time that can explain why Halliburton's stock price was down, if modestly, when the market and industry were up.

24. *February 25, 2000*: On Friday, February 25, 2000, Halliburton's stock price declined 4.9% to close at $33.69. The company-specific decline is 3.6%, a statistically significant decline. There was speculation regarding an upcoming meeting between the then- U.S. Energy Secretary and the oil minister for Saudi Arabia:

> Oil stocks performed well in anticipation of Saturday's meeting between Ali al-Naimi, the oil minister for Saudi Arabia, the world's biggest oil producer, and U.S. Energy Secretary Bill Richardson. The two leaders will meet to discuss a wide range of oil supply issues that recently have sent oil and gasoline prices sky-high. ...
>
> Oil services companies closed down for the day, with Halliburton (NYSE:HAL) falling 1 3/4 (-4.94%) to 33 11/16 and Schlumberger (NYSE:SLB) dropping 1 7/16 (-2.10) to 67.[32]

---

31. Also that day, ING Barings issued a positive report regarding Halliburton's earnings results which were released on January 27, 2000 (entitled "Strong U.S. Oilfield Boosts Results Above Expectations").

32. *Business Wire*, "SmartPortfolio.Com Announces Investment Opinion," February 26, 2000, 8:25 am ("Stock prices are reflective of February 25, 2000 at 5:30 PM, EST").

Appendix B

Although there was no company-specific information on February 25 to explain the decline that day in the stock, analysts commented on the recent poor performance in the stock prices of oil service companies:

> We like oil stocks and oil service stocks, companies like ARCO and Phillips, Baker Hughes, Schlumberger and Halliburton. These stocks haven't moved because of nervousness over long-term oil prices. But it looks like oil will hold above $20 a barrel for a good while.[33]

25. *May 2, 2000*: On Tuesday, May 2, 2000, Halliburton's stock price rose 7.06%, to close at $47.38. The company-specific return was 3.7%, a statistically significant increase. News commentators attributed the gain in Halliburton's stock price to OPEC's anticipated decision to not increase production quotas:

> [Traders] did have some opportunities to play off one piece of encouraging news, as crude-oil prices rose on expectations that the Organization of Petroleum Exporting Countries won't increase production quotas at its June meeting. An output increase, of course, would have hurt pricing. ...
>
> Oil-service stocks also improved in the session. Halliburton rose 3 1/8 to 47 3/8. Schlumberger

33. *Austin American-Statesman*, "When less will become more: Looking for value stocks' rebound," February 26, 2002.

> gained 2 9/16 to 77 9/16. Transocean Sedco Forex moved up 2 to 49 5/16.[34]

26. *May 19, 2000*: On Friday, May, 19, 2000, Halliburton's stock price rose 2.52% to close at $50.88. The company-specific return that day is 3.9%, which is a statistically significant increase because the market was down that day. There was no company-specific information on May 19 to explain the increase that day in the stock, although analysts later commented on the recent increase in the stock prices of oil service companies. For example, on the following Monday, May 22, an analyst with Donaldson, Lufkin & Jenrette raised his 12-month price target for the Company to $57 from $51, and raised his EPS estimate for 2001 "to reflect the assumption of more accretive acquisitions than [his] prior assumptions and secondarily to reflect a stronger oilfield recovery than [he] had anticipated."[35]

27. *May 30, 2000*: On Saturday, May 27, the weekly financial newspaper *Barron's* issued a positive report on Halliburton, stating it expected Halliburton's stock price to recover over the next 18 months:

> Oilfield stocks are rallying. The major energy companies will likely reopen their wallets soon.

35. Donaldson, Lufkin & Jenrette, "Raising 2001 Ests. and Target Price Based on Acquisition and Stronger Oilfield Recovery Assumptions; Lowering Rating to Market Performance on Valuation," May 22, 2000.

Appendix B

> So why do shares of Halliburton, the world's second-largest oil-service outfit, lag? The short answer is that the Dallas-based company gets about 70% of its revenues from the international market, where exploration and production have yet to take off. Moreover a large part of Halliburton's business is in engineering and construction activities that traditionally begin to pay off late in the oil cycle. In other words, the very things that are holding the stock back now are likely to power it higher over the next 18 months or so.[36]

On Tuesday, May 30, 2000,[37] an analyst at Jefferies & Company, Inc. raised its price target for Halliburton:

> We are maintaining our Accumulate rating on Halliburton Company, however, we are raising our price target on Halliburton to $56 per share from $50 per share based on recent positive developments at the Company and continuing signs that the Company's earnings are poised to turn higher. ... There is no question that most of the investment news surrounding Halliburton has been very positive in the last six months, however, Halliburton must continue

---

36. *Dow Jones International News*, "Barron's: Gusher Ahead: Expect Halliburton's Profits—And Its Share Price—To Continue Rising," May 27, 2000, 2:01 am.

37. The U.S. stock markets were closed Monday, May 29, 2000, in observance of Memorial Day.

> to demonstrate that the Company can achieve projected peak earnings potential due to higher drilling, and engineering and construction activity, favorable management decision making and the favorable reinvestment of free cash flow into new opportunities. Should Halliburton meet these criteria, the stock can reach or exceed our new price target.[38]

On May 30, 2000, Halliburton's stock price rose 4.7%, to $49.00. The company-specific return was 3.6% that day, a statistically significant positive return.

28. *June 8, 2000*: On Thursday, June 7, 2000, an analyst with Donaldson, Lufkin & Jenrette met with the Company. The analyst's report was issued on Friday, June 8, based on that meeting, in which he lowered his estimate for second-quarter operating earnings for the Company by a penny to 64 cents:

> Donaldson, Lufkin & Jenrette analyst Arvin Sanger on Friday lowered his second quarter operating earnings on oil exploration giant Halliburton by a penny after a meeting with the company's management Thursday.
>
> In a research report, Sanger lowered his estimate to 11 cents to reflect a still-sluggish engineering and construction environment,

38. Jefferies & Company. Inc., "Halliburton Company: Raising Price Target To $56," May 30, 2000.

> bringing the full-year estimate down a penny to 64 cents.
>
> "We are a little ahead of the Street," said an analyst in the group about the adjustment to Halliburton's second quarter earnings.[39]

On June 8, 2000, Halliburton's stock price was down 1.84%, to $46.63. The company-specific return was -3.5% that day, a statistically significant negative return because the industry index was up that day.

29. *October 6, 2000*: On October 5, 2000, Owens-Corning, a maker of fiberglass insulation and other building products, filed for bankruptcy protection "after it ran out of options to pay asbestos lawsuit claims that could eventually cost the company $7 billion."[40] The October 9 edition of Barron's discussed Halliburton's asbestos litigation exposure in light of the Owens-Corning situation:

> Halliburton's exposure so far has been slight compared to Owens-Corning and others. The oil-services concern paid out a total of $99 million in claims through the end of 1999, with all but $23 million covered by insurance. In

---

39. *Reuters*, "Research Alert—DLJ trims Halliburton Q2 operating earns by a pen [*sic*]," June 9, 2001, 9:21 am.

40. *Associated Press Newswire*, "Owens Corning seeks bankruptcy protection to cope with asbestos claims," October 5, 2000, 9:36 am.

its 10K and latest 10Q filing, Halliburton says Dresser has insurance covering "in whole or in part" its asbestos liability, and that it believes "pending asbestos claims will be resolved without material effect on our financial position or results of operations." This language and the relatively modest claims payments to date suggest the company doesn't have a meaningful problem.

One potential thorn could come from a former division of Halliburton, Highlands insurance, which provided coverage to Brown & Root. Highlands sued Halliburton in April, arguing that Halliburton assumed liability for asbestos claims filed after the Highlands spinoff in 1996. Halliburton has countersued, arguing that the Brown & Root exposure is Highlands' problem. Highlands has $162 million in statutory capital, an amount Halliburton says should be enough to pay remaining asbestos claims. Halliburton had 107,000 open cases at the end of June.

Given Halliburton's market value of $20 billion and its financial strength, even a worst-case asbestos scenario probably wouldn't be significant. But the asbestos issue could get more attention in the months to come at Halliburton and elsewhere.[41]

---

41. *Barron's*, "Financials, Broadcasters Sideswiped in Latest Tech Wreck," October 9, 2000.

Appendix B

On October 6, 2000, Halliburton's stock price was down 5.0%, to $43.94. The company-specific return was -3.8% that day, a statistically significant negative return.

30. *October 23, 2000*: On Monday, October 23, 2000, Halliburton reported that its Brown & Root Services unit was a target of the federal grand jury investigation. On that day, Halliburton's stock price was down 6.5%, to close at $41.19. The company-specific return was -3.5% that day; this is a statistically significant decline.

> Halliburton Company (NYSE: HAL) stated today that one of its business units, Brown & Root Services ("BRS"), is a defendant in civil litigation pending in federal court in Sacramento, California, alleging that it violated certain provisions of the False Claims Act while performing work for the U.S. Army at Ft. Ord in California (the "Qui Tam" litigation). This lawsuit was filed by a former employee in 1997. BRS has denied the allegations and is preparing to defend itself at trial, which is expected to occur in late 2001. Halliburton believes that the outcome of this civil litigation will not have a material adverse impact on it.
>
> Although in 1998 the U.S. Department of Justice declined to join the Qui Tam litigation, it has now advised BRS that BRS is the target of a federal grand jury investigation regarding the contract issues raised in the Qui Tam litigation. In addition, BRS has been served

> with grand jury subpoenas, which require the production of certain documents relating to the Ft. Ord contract. BRS is cooperating in the investigation and believes that it has acted in accordance with the law and the Ft. Ord contract. At the present, the Department of Justice has not made any specific allegations against BRS.[42]

31. *October 24, 2000*: On October 24, 2000, Halliburton's stock price was up 1.06%, to close at $41.63. The company-specific return was 4.2% that day; this is a statistically significant increase because both the market and the industry were down that day. There is no company-specific news on this day.

32: *October 25, 2000*: After market close, on October 24, 2000, Halliburton announced that it intended to restructure and shrink its engineering and construction units into a single unit. The changes would "put some major businesses, including construction giant Kellogg Brown & Root and Brown & Root Services, under one management." Lesar said that:

> [T]he engineering and construction units have been hurt because customers have been slow to move ahead with major construction projects and that profits have been unsatisfactory.

---

42. *PR Newswire*, "Brown & Root Services to Defend Civil Litigation," October 23, 2000, 2:00 pm.

> ... Kellogg Brown & Roots profits have been adequate so far because that unit has been working through a backlog of projects.
>
> However, its profit margins will erode as it finishes projects and customers continue to delay decisions on major new construction.
>
> The announcement, made toward the end of Halliburton's discussion of third-quarter earnings, overshadowed the company's sharply improved profits. The company said it earned $157 million in the three months ended Sept. 30, up 171 percent from the same period in 1999. The results equaled 35 cents per share diluted on $3.02 billion in revenue. In third quarter 1999, Halliburton earned $58 million, or 13 cents a share, on revenue of $2.97 billion.[43]

33. The announcement by the Company on October 24 prompted certain analysts to cut earnings forecasts.

> Shares of oil-services firm Halliburton Co. slumped Wednesday after the company announced a restructuring of its engineering and construction units.
>
> Company officials said after the close of markets Tuesday that a slowdown in new orders was threatening profits in the units.

---

43. *Knight Ridder Tribune Business News*, "Dallas-Based Halliburton Co. to Combine Engineering, Construction Units," October 25, 2000.

Appendix B

ING Barings lowered its rating on the stock from "buy" to "hold," Southwest Securities downgraded from "buy" to "accumulate," and Dain Rauscher Wessels said that because of "too many uncertainties" in the non-oilfield units investors should focus on purely oil-service stocks.

In trading Wednesday morning, Halliburton shares were down $5.13, or more than 12 percent, to $37.06.

The Dallas-based company, which was led until August by Republican vice presidential candidate Dick Cheney, said it plans to restructure and shrink its engineering and construction businesses into a single unit.

The company made the announcement while releasing its third-quarter results. Halliburton said excluding one-time items, it earned $109 million, or 24 cents per share, a penny better than expected by analysts surveyed by First Call/Thomson Financial. Revenue was $3 billion.

Chairman and chief executive Dave Lesar the company is not satisfied with profits in the engineering and construction business, as customers have delayed major projects.

Lesar said profit margins at Kellogg Brown & Root will shrink as it finishes a backlog of jobs

and customers delay decisions on major new construction.[44]

34. Several analyst reports were released on October 25.

> Merrill Lynch analyst Kevin Simpson said he had cut his estimate of Halliburton's 2001 earnings per share to $1.30 from $1.50 but was maintaining an accumulate rating on the stock.

> "The engineering and construction side of the business is turning much more slowly than they had expected and than I had expected," he said.
>
> Mark Kellstrom, an analyst with Jefferies & Co., said he thought the market had overreacted by driving down Halliburton's stock so much. He maintained a buy rating for the stock and kept his 2001 earnings per share estimate unchanged at $1.65.
>
> "At this point engineering and construction is not a big driver of the company's earnings," he said.
>
> Kellstrom said continuing recovery at Halliburton's oilfield services business could

44. *Associated Press Newswires*, "Halliburton stock slides on news of restructuring, slowing projects," October 25, 2000, 12:24 pm.

> more than make up for the decline in earnings from engineering and construction.
>
> "The company's long-term earnings power is still intact," he said.[45]

35. Analyst James K. He stated:

We recommend investor's focus on pure-play oilfield service stocks that are more highly leveraged to the continued cyclical recovery. We continue to rate the stock Neutral.[46]

The report also states that the "expected increase in international activity is materializing at a much slower

---

45. *Reuters News*, "Update 2—Halliburton stock hit by engineering slowdown," October 25, 2000, 4:26 pm.

46. Dain Rauscher Wessels, "Halliburton Reports: Announces Major Restructuring Initiative," October 25, 2000.

rate than originally anticipated [and i]nvestor concerns of asbestos liabilities may dampen investor's interest in the stock until the ultimate outcome becomes more clear. Wicklund reduced his fourth-quarter estimates to "reflect the increasing weakness in the engineering and construction business and the slower-than-expected increase in international activity."

36. Analyst Allen Brooks with CIBC stated in his report that day:

> We are maintaining our Buy rating but reducing our price target to $50 from $56. We anticipate much market confusion due to the uncertainty about future earnings, the valuation of the stock and what Halliburton may look like in the future. ...Our basic conclusion is that the stock price can move higher over the next 12 months given the strength of the oilfield service industry recovery, especially internationally where Halliburton derives 64% of its business. The stock price may go lower first, however.
>
> The shock in the conference call was management's statement that, given the outlook for customer spending in the shallow water marine construction market and the downstream [Engineering and Construction] business, it is not sure that Halliburton has the critical mass to generate consistent and predictable profitability and profit growth from these sectors. Management believes

> the stock is being punished for the lack of this predictability. Therefore, it will look to a significant restructuring of these businesses with an eye to achieving this goal during 2001. We could envision a substantial shrinking of these operations as they are presently constituted. In the end, the company should produce better returns on capital that should produce an improved valuation. The issue is how long it will take to accomplish this goal and what the nearterm costs are.[47]

37. Analyst Fratt with A.G. Edwards & Sons, Inc. stated that Halliburton's EPS was ahead of expectations "due to strong North American drilling market," but that the "near-term outlook [was] less robust." Fratt lowered his estimates for the Company to "reflect weaker [Engineering and Construction] business," concluding that the "[r]estructuring is positive and oilfield service recovery continues." Fratt reiterated his "Accumulate/ Aggressive" rating for the Company.[48]

38. Analyst Asit K. Sen with ABN AMRO stated:

> Strong performance from the oil field services business ... were essentially offset by weaker

---

47. CIBC, "Weak E&C Outlook Prompts Restructuring; Reducing Estimates," October 25, 2000.

48. A.G. Edwards & Sons, Inc., "North America Drives Positive Earnings Surprise—Lowering Estimates to Reflect Weaker E&C Business," October 25, 2000.

> results from the Engineering and Construction (E&C) business. ... The company indicated that it is embarking on a strategic restructuring program to improve results from the E&C business that we view positively. ... We are lowering our 2000 EPS estimate to $0.55 (from $0.58) and 2001 estimate to $1.35 (from $1.50).[49]

39. In a later report that day, Sen of ABN AMRO stated that the Company's shares "were off as much as 18% this morning following management's cautious comments on the outlook of the Engineering and Construction (E&C) business. We view this as an overreaction."[50]

40. On October 25, 2000, Halliburton's stock price declined 10.96%, to close at $37.06. The company-specific return that day is negative 6.6%, a statistically significant decline. Trading volume was 25.35 million shares that day, more than 7 times the average daily trading volume for Halliburton stock during the Class Period.[51]

41. *December 18, 2000*: On December 18, 2000, Halliburton's stock price was up 4.03% to close at $38.75. However, the company-specific return that day is negative

---

49. ABN AMRO, "HAL: Lowering 2000 and 2001 Earnings Estimates," October 25, 2000.

50. ABN AMRO, "HAL: Bruised But Not Broken—Sensitivity Analysis," October 25, 2000.

51. The average daily trading volume for Halliburton stock during the Class Period was 3.46 million shares.

3.76%, a statistically significant decline because the industry was up sharply that day. There was considerable positive industry news on December 18, 2000, which was reflected in Halliburton's share price, but not to the same extent as industry peers.

42. Moody's Investors Service issued a press release stating it expected the oil services industry to recover by the end of 2001:

> Improving fundamentals have created a generally stable to positive rating outlook for the oil services industry, according the new Moody's Investors Service annual outlook for the sector. Moody's also believes consolidation among these companies will continue.
>
> "We expect the overall sector to recover by the end of 2001, based on strong oil and natural gas prices and higher budgeted capital spending by major oil companies, national oil companies, and independent E&P companies," says Moody's vice president and senior credit officer Alexandra Parker, author of the outlook.[52]

43. Also that day, analyst Geoff B. Kieburtz with Salomon Smith Barney issued a positive report on the oilfield equipment and services industry in which he

---

52. *Dow Jones Newswire*, "Moody's: Stable To Positive Outlook For Oil Service Indus," December 18, 2000, 11:21 am.

recommended Halliburton's stock for investors seeking exposure to the accelerating international recovery.[53]

> The investment bank's comments contributed to a jump in oilfield service stocks, with the main index for the volatile sector showing a gain of almost 8 percent by early afternoon. ... [54]

Lehman Brothers Holdings Inc. also issued a positive sector report that day.

> The positive outlook from analysts at Lehman Brothers Holdings Inc. and Citigroup's Salomon Smith Barney touched off a rally among the stocks of oilfield-service and equipment companies, which make their profit from spending on exploration-and-drilling projects. ... Sector bellwethers Schlumberger Ltd. (SLB) and Halliburton Co. (HAL) also posted gains of $5.06, or 7%, to $77 and $1.50, or 4%, to $38.75, respectively. [55]

44. *December 22, 2000*: On Thursday, December 21, 2000, Halliburton pre-announced fourth-quarter earnings and formally unveiled the restructuring of its engineering

53. Salomon Smith Barney, "Oilfield Equipment & Services; 19th Annual E&P Spending Survey Forecasts 20.2% Growth in 2001," December 18, 2000.

54. *Reuters News*, "Research Alert—Salomon sees E&P spending growth," December 18, 2000, 1:03 pm.

55. *Factiva Energy Digest*, December 19, 2000, 8:59 am.

and construction units. The press release stated that it planned to take a charge of $120 million in the fourth quarter, the bulk of which was due to cost overruns at several overseas projects.[56]

> [Halliburton will] record[] approximately $120 million after tax charges in the fourth quarter related to restructuring and charges on projects of the engineering and construction businesses. Both Brown & Root Energy Services and Kellogg Brown & Root are impacted by the charges and reorganization.
>
> The portion of the charges related to reorganization costs is expected to be approximately $25 million after tax and primarily relate to severance costs associated with a reduction in the number of senior management positions and costs to exit several facilities no longer required, while the remaining charges primarily relate to project specific matters.
>
> During the quarter, several large fixed fee engineering and construction projects, including two projects where Kellogg Brown & Root participates as a member of a construction

56. Aftermarket close, on January 30, 2001, Halliburton released its fourth-quarter 2000 earnings results in which the Company increased the $120 million charge announced December 21 to $193 million (of which, $157 million was attributed to project losses).

> joint venture, incurred significant additional costs related to projected completion of the projects. Much of the additional costs relate to labor disturbances in Venezuela and West Africa that have significantly affected productivity on the projects. While claims will be made for a large portion of the additional costs, management does not believe that all the claims will be recovered. In addition, negotiations with customers regarding cost increases on seven other projects have not resulted in resolution of certain claims as originally anticipated.[57]

45. In general, analysts were surprised by the charges related to the cost overruns.

> Halliburton said approximately $25 million of the charge will cover costs of the restructuring, which analysts said could foreshadow spinning off the engineering and construction units into a separate company. But the bulk of the charge, about $95 million, was related to delays and cost overruns. The company blamed some on labor problems in Venezuela and West Africa and said it will make claims to recoup the money. It is also negotiating, so far unsuccessfully, to recover extra costs on seven other projects.

---

57. *PR Newswire*, "Halliburton Announces New Structure and Engineering and Construction Charges," December 21, 2000, 8:59am.

> The Dallas-based company had hinted about the restructuring two months ago, but the cost overruns caught observers off-guard.
>
> "There are nine projects (with overruns). That points more to a problem with the bidding process," said Jim Wicklund, an analyst with Dain Rauscher Wessels who rates Halliburton stock "neutral."
>
> Allen Brooks, an analyst with CIBC World Markets Corp., attributed the overruns to doing business in places such as Nigeria.
>
> "It was a little bit of a surprise, but I don't raise too high a flag about it," said Brooks.[58]

46. Analysts continued to express concerns on December 22:

> Two investment analysts who follow Halliburton expressed some unhappiness about the write-off from cost overruns and higher expenses, which came as a surprise to them.
>
> "I knew there would be charges," said Fred A. Mutalibov with Southwest Securities Inc. in Dallas. "But one of the problems with the big companies like Baker Hughes, Halliburton and

---

58. *Associated Press*, "Halliburton to split into two divisions," December 21, 2000, 5:31 pm.

Appendix B

Schlumberger within my industry is that what are called one-time or non-recurring charges keep coming again and again."

Jim Wicklund, analyst with Dain Rauscher Wessels in Dallas, said excluding the charges makes it difficult for investors to compare Halliburton's earnings from quarter to quarter. It isn't the first time Halliburton has written off cost overruns on projects, he said.

"This is $95 million in charges where they had significant cost overruns and seven projects that they had cost increases that they haven't been able to pass along. With no offense meant toward Halliburton, that's a lack of good contingency consideration," he said.

Halliburton shares, after trading off as much as $1.31, closed down 75 cents to $37 Thursday on the New York Stock Exchange.

Guy Marcus, Halliburton's vice president of investor relations, declined to identify the projects or customers with which Halliburton has incurred the higher costs.

Halliburton said "several large fixed-fee" projects, including two where its Kellogg Brown & Root unit is part of a construction joint venture, "incurred significant additional costs" coming up to completion.

> It said "labor disturbances" in Venezuela and West Africa "have significantly affected productivity on the projects."
>
> "While claims will be made for a large portion of the additional costs, management does not believe that all the claims will be recovered," Halliburton said.
>
> The company also said that on seven other projects, it has been unable to resolve claims over cost increases as it had first anticipated.[59]

47. Although the stock fell 2.0% on December 21, this was not a statistically significant return. On December 22, 2000, Halliburton's stock price declined 2.7%, to close at $36.00. The company-specific return that day is negative 3.9%, a statistically significant decline (although the industry was down that day, the overall market was up more than 3.0%). The price reactions on December 21 and 22 are consistent with the charge for cost overruns at various projects that was a surprise to the market.

48. Several analysts issued reports on December 21 and 22 in response to the Company's announcement.

A.G. Edwards & Sons:

> Although these project adjustments will undoubtedly have a positive impact on

59. *Texas*, "Dallas-Based Oil Services Firm Halliburton to Take $120 Million Charge," December 22, 2001.

[Engineering and Construction] profitability in 2001-2, the extent of the adjustments is much wider than previously thought, in our view, and is evidence that execution problems have also had a negative impact on [Engineering and Construction] operating results. With the restructuring and project adjustments, we believe that [Halliburton's] [Engineering and Construction] business should be on track to meet its 3% margin goal in 2001 and generate closer to 5% margins in the future. We point out that the [Engineering and Construction] backlog has improved slightly since the end of 3Q2000 and additional activity should materialize as integrated oil companies increase capital spending in 2001.[60]

CIBC:

The struggling [Engineering and Construction] division has been a drag on [Halliburton's] stock performance. Based on our 2001 EPS estimates, [Halliburton] currently trades at a 35% valuation discount to other major oil services companies. Although part of this discrepancy is warranted due to the weak performance of the [Engineering and Construction] business, we believe [Halliburton] can narrow the valuation gap with a successful reorganization.

60. AG Edwards & Sons, Inc. "E&C Business Restructuring Formally Announced—4Q2000 EPS ON Track," December 21, 2000.

Additionally, the strength of the recovery in the oilfield service industry should also enhance stock price appreciation.[61]

49. *February 12, 2001*: On February 12, Halliburton's stock price rose 0.42%. The company-specific return is 4.6%, a statistically significant increase because the industry was down that day. Schlumberger stock, a major Halliburton competitor, was down 12% that day on news of a proposed cash purchase of Sema PLC, a British technology information firm, which dragged down the overall industry return.[62]

50. *April 26, 2001*: After market close on April 25, 2001, Halliburton released its first-quarter 2001 financial results, reporting earnings on the low end of analysts' estimates, and stating that the company expected 2001 EPS to be at or above $1.30, which was higher than analysts' consensus forecast of $1.20, "as a recovery in demand for oilfield services gradually spreads beyond North America. Halliburton said its customers stepped up their drilling activity in response to high oil and natural gas prices."[63]

62. *Chicago Tribune*, "Schlumberger Buying Firm to Help Diversify Oil Field Giant to Pay $5.2 Billion for Sema," February 13, 2001.

63. *Reuters News*, "UPDATE 2—Halliburton earnings more than triple," April 25, 2001, 7:33 pm; *Reuters News*, "Halliburton sees 2001 EPS at or above $1.30," April 25, 2001, 5:46 pm.

51. In response to the Company's first quarter earnings results, certain analysts raised their estimates and/or rating for Halliburton. For example, on April 26, 2001, analyst Tom Escott with Robinson Humphrey raised his estimates for Halliburton's EPS and raised his rating to "Outperform" from "Neutral," stating: "After downgrading [Halliburton] to Neutral last August at $53.50, we are upgrading our rating to Outperform based on the improved earnings outlook."[64] Credit Suisse First Boston Corporation ("CSFB") raised its 2001 and 2002 estimates for Halliburton "to reflect company guidance and incorporate stronger revenue and margin growth in the oilfield operations."[65] Prudential Securities raised its investment recommendation on Halliburton to "Strong Buy" from "Accumulate" on increased earnings forecasts.[66]

52. Some analysts maintained the ratings and estimates for the Company. CIBC maintained its estimates and rating for Halliburton, stating "Business trends and outlook comments by management support our thesis of a recovery of international activity becoming the principal driver of [Halliburton's] earnings in 2H01 and thereafter."[67]UBS Warburg maintained its ratings for Halliburton, stating: "Although the outlook for

67. CIBC World Markets, "Halliburton Co.: 1Q01 EPS In Line; Broadening Recovery Under Way," April 26, 2001.

[Halliburton's] core business is improving, we still do not find the risk/reward ratio as attractive as that of some of its peers. Our rating remains Hold."[68]

53. On April 26, Halliburton's stock price rose 9.09%, to close at $42.13. The company-specific return was 3.7%, a statistically significant increase. News commentators attributed the Company's stock price gain to its positive earnings release.[69]

54. *June 29, 2001*: On Thursday, June 28, 2001, after market close, Halliburton announced that Harbison had been requesting the Company's financial assistance with asbestos claims Harbison agreed to assume in 1992 after it was spun off from Dresser. Dresser had agreed to handle asbestos claims filed prior to the split, and Harbison agreed to handle asbestos claims filed afterward. Dresser was named as a defendant in the claims, and the companies were in effect co-insured. Halliburton stated that it had "substantial interest" in resolving the claims, and that this development exposed the Company, net of insurance recoveries, to a worst case asbestos liability cost of $60 million.[70] On June 29, 2001, Halliburton's stock price declined 4.22%, to close at $35.60. The company-specific return that day is negative 4.6%, a statistically significant decline.

68. UBS Warburg Research Note, "Halliburton: Below Expectations for 1Q; Guides Higher for 2Q," April 26, 2000.

69. *Reuters News*, "Oil services shares surge on rosy outlook," April 26, 2001, 2:28 pm.

70. *Dow Jones News Service*, "Harbison-Walker Asks Halliburton For Asbestos Claims Help," 4:47 pm, June 28, 2001.

55. Certain analysts expressed concern over the Company's potential exposure to asbestos liability, which is reflected in the decline in the stock price. On June 29, Goldman Sachs removed Halliburton from its list of top recommendations, citing anticipated pressure on the Company's stock price due to this asbestos related disclosure:

> Analyst Terry Darling ["Darling"] wrote in a report, "Although [Halliburton's] operating performance is improving (second quarter upside surprise likely) and it's unlikely that this event substantially increases [Halliburton's] financial risk from asbestos liabilities, we believe the incremental uncertainty created by this new development is likely to place further pressure on [Halliburton] shares.[71]

CNBC discussed the Goldman Sachs downgrade:

> [Halliburton] was downgraded today by Goldman Sachs. The bottom line from Goldman is that Goldman says the company has issues with w--asbestos *[sic]* liabilities. That's going to be a problem, even though the fundamentals appear to be improving for Halliburton. The firm is taking the stock off of its recommend list. They make it a market performer on the heels of the company, saying it may assume

71. *Reuters News*, "Research Alert—Goldman cuts Halliburton from recommended list," June 29, 2001, 8:04 am.

asbestos liabilities of Harbison Walker, which was spun off by Dresser Industries as Indresco back in 1992.[72]

56. Analyst Geoff Kieburtz with Salomon Smith Barney, stated:

> There is risk from the company's asbestos liability on three fronts. First, the possibility of a dramatic increase in the number of new claims filed. The first quarter of 2001 saw 18,000 new claims filed, versus a total of 45,000 during all of 2000, indicating a potential annual total this year of 72,000 new claims. Second, claimants could become more aggressive in terms of the amount of money being sought, as has been the case with other asbestos defendants, such as McDermott International. Third, the Delaware Supreme Court could uphold the lower court ruling that Highlands is not obligated to provide insurance coverage for asbestos claims filed against Kellogg Brown & Root, thereby removing Halliburton's primary insurance coverage for these claims.
>
> Despite the risks detailed above, we do not expect that Halliburton's asbestos exposure presents a material risk to the company's existence as a going concern. Firstly, the magnitude of the

72. *CNBC Squawk Box*, "Newscast: Squawk Box, 9:30 AM; today's business news," June 29, 2001.

> company's exposure is an order of magnitude lower than that of McDermott International, while Halliburton is a significantly larger and more profitable company. With $278 million of cash at the end of the first quarter, against an $84 million accrued liability for open claims, assuming no insurance coverage, Halliburton appears to have sufficient financial resources to manage this exposure. Thus, we reiterate our Buy rating on the stock.[73]

57. Analyst Sanger with Deutsche Banc Alex. Brown stated:

> This charge, if taken, will be in Q2 for discontinued operations, and will be easily offset by the $300 million after-tax gain on the sale of Dresser Equipment Group. While insignificant by itself, it does remind people of [Halliburton's] asbestos liabilities and could depress its multiple as these concerns rear their head again. We continue to rate [Halliburton] a Buy because of its recent sharp pull back but prefer RIG, BHI and SLB (all Strong Buy rated) among the large caps. Our target price remains unchanged at $54 ....[74]

---

73. Salomon Smith Barney, "HAL: Possible Additional Asbestos Exposure," June 29, 2001.

74. Deutsche Banc Alex. Brown, "Halliburton Increases Asbestos Reserve. Reiterate Buy, but Renewed Concerns Could Impact Valuation," June 29, 2001.

Appendix B

58. *July 26, 2001*: After market close on July 25, 2001, Halliburton released its second quarter financial results, reporting strong revenue and earnings:

> [S]econd-quarter earnings from continuing operations more than doubled as oil and gas companies stepped up their drilling activity in response to strong energy prices during the quarter.
>
> Dallas-based Halliburton, headed until August 2000 by U.S. Vice President Dick Cheney, said second-quarter earnings from continuing operations and excluding one-time items rose to $143 million, or 33 cents per share, from $52 million, or 12 cents a share, in the same period of 2000.
>
> 'Analysts' earnings estimates had ranged from 28 to 32 cents per share, with a mean estimate of 30 cents, according to research firm Thomson Financial/First Call.[75]

59. Several analysts raised their estimates for Halliburton in response to the results:

For example, analyst Sanger raised EPS estimates for the Company, stating:

> Although we expect a drilling slowdown in the US to negatively impact [Halliburton], the

75. *Reuters News*, "Halliburton operating earnings more than double," July 25, 2001, 4:11 pm.

> near term strength there and the longer-term leverage to the international recovery are higher than we had assumed. Consequently, we are raising our EPS estimates for 2001 from $1.19 to $1.32, leaving 2002 unchanged at $1.63. We are also maintaining our target price of $44 based on a 27 multiple of 2002 EPS (implying an 11.9 multiple of 2002 EBITDA), and we continue to rate [Halliburton] a Buy.[76]

ABN AMRO also raised their EPR targets for the Company:

> We are raising our 2001 EPS estimate to $1.40 from $1.25 to reflect the upside surprise, as well as a more rapid improvement in the international markets than we had previously anticipated. In addition, we are increasing our 2002 EPS estimate to $2.10 from $2.00.[77]

That day, Halliburton's stock price rose 3.65% to close at $35.50. The company-specific return was 3.4%, a statistically significant increase.

60. *August 9, 2001*: On August 9, 2001, Halliburton filed Form 10-Q with the SEC, in which it increased its

---

76. Deutsche Banc Alex. Brown, "Q2 Earnings Higher Than Expected; Raising Ests, but Maintaining 2002 Ests, Target Price and Strong Buy Rating Because of Rapidly Improving Fundamentals," July 26, 2001.

77. ABN AMRO, "International Stength [*sic*] Drives Upside Surprise," July 26, 2001.

accrued net liability for known open asbestos claims to $124 million (from $30 million on March 31, 2001 and $29 million on Dec. 31, 2000). In response to the Company's filing, an analyst at A.G. Edwards stated that the situation was now more complex and uncertainty increased, although it appeared manageable:

> With these recent developments the scope of Halliburton's potential asbestos liabilities has expanded and uncertainty has increased. The inherent uncertainty of litigation as well as the possibility that a series of adverse court rulings or new legislation could quickly alter [Halliburton's] position, makes it very difficult for the company accurately predict the outcome. However, based on its: historical experience with similar claims; understanding of the facts and circumstances that gave rise to asbestos claims; and estimate of amounts that will be recovered from insurance companies; along with the time elapsed since Halliburton and its former divisions or subsidiaries discontinued sale of products containing asbestos; and the time elapsed since Kellogg Brown & Root used materials containing asbestos in any construction process; [Halliburton] believes that the known open asbestos claims are manageable and will be resolved without a material adverse effect on its financial position or results of operations. Regardless, the situation should be monitored closely and the uncertainty could continue to hamper

Appendix B

Halliburton's valuation relative to its peers (BHI and SLB).[78]

61. On August 9, 2001, Halliburton's stock price declined 4.48%, to close at $32.00. The company-specific return that day is negative 5.2%, a statistically significant decline. The decline was attributed to the information released in the 10-Q:

> Halliburton Co, the world's No.1 oilfield services firm, saw its stock fall 4.5 percent on Thursday after the company released information showing a sharp increase in its asbestos litigation liability.
>
> Dallas-based Halliburton, headed until August 2000 by U.S. Vice President Dick Cheney, said it estimated its net liability for open asbestos claims against current and former Halliburton subsidiaries at $124 million as of June 30, 2001, up from $30 million on March 31, 2001 and $29 million on Dec. 31, 2000.
>
> The information, contained in a 10-Q filing with the Securities and Exchange Commission (SEC), hit Halliburton's stock which closed $1.50 lower at $32.

---

78. A.G. Edwards, "Net Liability for Asbestos Claims Rises—More Complex Situation Appears Manageable but Uncertainty Increases," August 10, 2001.

Appendix B

> "When you look at the growth in claims and you look at these numbers, we're concerned," said Scott Gill, an analyst with Houston-based energy investment bank Simmons & Co.
>
> Gill said the information about the asbestos claims—which date back to the 1970s—was far more detailed than the company had made in 10-Q statements in previous quarters.[79]

62. *October 31-November 1, 2001*: After market close, on Tuesday, October 30, 2001, Halliburton announced that on October 26, 2001, a jury in Mississippi found Dresser (through Harbison) liable in two of six asbestos cases for total compensatory damages of $21.3 million ($10.7 million per plaintiff). The case was against three companies, and the total verdict was $150 million. This verdict had not yet been affirmed and a judgment had not yet been entered against the Company. The Company stated that it would "file post trial motions and vigorously appeal if the verdict is not set aside"[80]

63. One analyst was surprised by the size of the award, and expected the news to have a negative impact on the Company's stock price:

> Six plaintiffs were each awarded $25 million and Dresser (through the Harbison-Walker

---

79. *Reuters News*, "Halliburton stock down as asbestos liability rises," August 9, 2001, 7:12 pm.

80. *PR Newswire*, "Halliburton Disputes Asbestos Claims," October 30, 2001, 8:05 pm.

(H-W) subsidiary) was found liable in two of the six cases for total compensatory damages of $21.25 million ($10.675 million per plaintiff). Potential 4Q2001E impact is small: $5mil or $3mil tax effected = less than $0.01/share hit. If appeal is unsuccessful, reserves could move up sharply. This jury award sets new precedents; the size of award is enormous ....

Size of jury award was unexpected and is likely to have a negative impact on stock price tomorrow. We expect a vigorous defense by [Halliburton's] and remain optimistic that the asbestos liability will remain under control. Given the significant discount relative to its peer group, we believe that [Halliburton's] current stock price adequately discounts potential asbestos liability risk.[81]

64. Another analyst noted the risks:

We continue to monitor the situation closely and we recognize the unpredictability and apparent irrationality of the asbestos litigation environment in general. For example, at least 95% of the claims filed against Halliburton are by claimants that have no symptoms of illness and a very small fraction, under 3%, have

81. A.G. Edwards, "Asbestos Case in Small Mississippi Town Yields $150 Million Jury Award Against HAL, MMM and Others—Vigorous Appeal Expected," October 31, 2001.

> diagnosed cancer. Notably, the five claimants in the Orange County case all had been diagnosed with cancer. In addition, each case that is filed against Halliburton has many other co-defendants, creating a degree of competition between defendants to avoid being tagged with a liability. However, because of these factors and others, we cannot confidently develop a "worst case scenario" for Halliburton's ultimate asbestos liability. [82]

65. On October 31, 2001, Halliburton's stock price declined 6.3%, to close at $24.69. The company-specific return that day is negative 4.9%, a statistically significant decline. The Company's stock continued to decline 2.88% on November 1, 2001, to close at $23.98. The company-specific decline is -3.7%, a statistically significant decline because the market was up that day.

66. *November 6, 2001*: On November 6, 2001, Halliburton's stock price declined 3.85%, to close at $21.72. The company-specific return that day is negative 3.5%, a statistically significant decline. There was no company-specific news on that day consistent with the price decline.

67. After market close on November 6, 2001, based on the Company's third quarter earnings, which were released after market close on October 23, 2001, investment firm Hibernia Southcoast Capital reduced its

---

82. Salomon Smith Barney, "HAL: Further Asbestos Developments," October 31, 2001.

EPS estimates and 12-month price target for Halliburton (to $34 from $60). The firm maintained its "Buy/Strong Buy" rating for the Company's shares.[83]

68. *November 9, 2001*: On November 9, 2001, Halliburton's stock price rose 0.18%, to close at $22.76. However, the company-specific return that day is negative 3.4%, a statistically significant decline, because the industry was up that day.

69. On November 9, 2001, Salomon Smith Barney issued a report on Halliburton that was generally positive but in which the analyst lowered his earnings estimates for fourth quarter 2001 and maintained his 2002 estimate and Buy rating.

70. *December 4-7, 2001*: During the period December 4 through December 7, 2001, Halliburton disclosed recent adverse asbestos jury verdicts in Form 8-K SEC filings and there was substantial discussion in the news and by analysts related to Halliburton's potential asbestos exposure.

71. On Tuesday, December 4, the Company filed Form 8-K with the SEC, in which it disclosed that a Texas District Court had entered a judgment against Dresser on a $65 million jury verdict rendered in September 2001.[84]

---

83. Hibernia Southcoast Capital, "Halliburton Co.," November 6, 2001.

84. This verdict was known to the public before December 4. For example, an analyst for Salomon Smith Barney referred to this verdict in his November 9, 2001 report.

In the same filing, the Company disclosed that the same district court also entered three additional judgments against Dresser in favor of 100 other asbestos plaintiffs in the aggregate amount of $35.7 million related to an alleged breach of a purported settlement agreement. The Company stated that it intended to appeal the three judgments "on the grounds that it wasn't a party to the settlement agreements and that it didn't authorize anyone to settle on its behalf. The company said it believes its appeal will be successful."[85]

72. On December 3, 2001, Halliburton's stock price closed at $22.06. On December 4, Halliburton's stock price declined 0.73%. The company-specific return is -3.7%; this is a statistically significant negative return because both the market and the industry are up that day. On December 5, Halliburton's stock price increased 0.46%, which also is a statistically significant negative return because both the market and the industry are up that day (the company-specific return is -3.8%). On December 6, the stock declined 5.23%. This is not a statistically significant return because both the market and the industry are down that day. Halliburton closed at $20.85 on December 6.

73. Analysts recognized the market's concern with Halliburton's asbestos exposure but continued to recommend the stock. This is consistent with the net stock price decline over December 4-6. Analyst Fratt with A.G. Edwards lowered his price target for Halliburton and reiterated his "Strong Buy/Speculative" rating:

---

85. *Dow Jones Corporate Filings Alert*, "Texas Court Enters $65M Verdict Against Halliburton," December 4, 2001, 8:45 am.

> In our view, these large jury awards are troubling due to the size of awards and jury findings appear to based *[sic]* on the possibility of development of asbestos-related illnesses, not actual presence of asbestosis, a form of asbestos-related lung cancer, or mesothelioma, a cancer that is caused by exposure to asbestos. Nonetheless, [Halliburton's] asbestos liability remains large and the overhang could remain in place for the next several years in spite of [Halliburton's] vigorous defense (in part due to the lengthy appeals process). ...
>
> Although disappointing earnings, a weak engineering & construction (E&C) business environment and exposure to asbestos litigation have weighed on the stock price, an extensive restructuring in the E&C business, the sale of Dresser Equipment Group and improving Energy Service operating results, especially outside of North America, should enable Halliburton to perform better in the near-term. In addition, a slowing of asbestos litigation claims could help the stock perform better.[86]

74. Analyst Sanger of Deutsche Banc Alex. Brown reiterated his Strong Buy rating for Halliburton, stating that the market was over-discounting the Company's potential asbestos liability:

---

86. A. G. Edwards, "Asbestos News Continues to Develop—North American Drilling Market Weak and 2001-2 EPS Estimates Lowered," December 5, 2001.

Appendix B

> Improved disclosure does not mean improved clarity: The asbestos issue continues to overhang [Halliburton] and better disclosure of its liabilities, a strategy which [Halliburton] has now decided to pursue, does not provide investors with comfort on either the upper-end or the potential ultimate liability or on the timing of the development of a clearer definition of what that liability might be.
>
> Recommendation: We continue to rate [Halliburton] a strong Buy and we believe that the current valuation over-discounts the asbestos liability ....[87]

75. On the morning of December 7, 2001, the Company filed Form 8-K with the SEC disclosing that on December 5 a Maryland jury had awarded a $30 million verdict against Dresser in favor of five plaintiffs in an asbestos litigation. The Company stated that it intended to "aggressively" appeal the verdict:

> The company said it believes the trial court committed numerous errors and that the evidence didn't support the verdict, according to the filing. The company intends to challenge the verdicts by post trial motion and, if those motions aren't successful, to pursue an appeal "aggressively."[88]

---

87. Deutsche Banc Alex. Brown, "Better Asbestos Disclosure Does Not Help Stock Price," December 5, 2001.

88. *Dow Jones Corporate Filings Alert*, "Jury Returns $30M Verdict against Halliburton Subsidiary," 8: 17 am.

76. Several analysts issued reports that day in response to the Company's SEC filing. Analyst Geoff Kieburtz with Salomon Smith Barney downgraded his rating for Halliburton (to 3H from 1M) and dropped his price target to $20 from $36 citing mounting asbestos liabilities:

> This verdict comes on the heels of a $21 million Mississippi jury verdict, a $65 million judgement in Orange, Texas, and an additional $36 million, representing a settlement previously negotiated by Harbison-Walker. All of these cases pertain to Harbison-Walker, a former subsidiary. The company has indicated that in all cases that it believes the trial courts have committed numerous errors, and that it expects to prevail on appeal. While the stock heavily discounts Halliburton's asbestos exposure, the specter of lawsuits spiraling out of control is likely to adversely impact the stock for the foreseeable future, and thus we cannot recommend it at this time.[89]

77. Analyst Sen with Jefferies & Co. put his rating for Halliburton under review citing uncertainty regarding the asbestos litigations and near-term earnings risk:

> We have remained cautious on Halliburton for two main reasons: 1) uncertainty surrounding

89. Salomon Smith Barney, "HAL: Downgrading on Mounting Asbestos Liabilities," December 7, 2001.

> ongoing asbestos litigation, and 2) near-term earnings risk .... These [asbestos related disclosures] are surprising developments following management's rather positive asbestos update during its 3Q01 conference call on October 23. During the conference call management had provided further assurances that current reserves are adequate to cover projected asbestos liabilities. We now believe that [Halliburton's] asbestos-related net liabilities could be significantly higher than currently estimated (estimated at $125 million by the company). We continue to remain cautious on the stock. Our rating is under review (with a negative bias) pending further update from management on asbestos.[90]

78. UBS Warburg analyst, James Stone, downgraded his rating for Halliburton to "Hold" from "Strong Buy" and reduced his 12-month target price to $24 from $38:

> While we do not anticipate that every claim filed against Halliburton will end up in court, in fact the vast majority of claims should continue to be settled at or near the company's historical settlement rates. Nevertheless, if only 1% of cases resulted in jury verdicts of a similar magnitude and the awards were upheld at the appellate level, the future liability would

90. Jefferies, "Halliburton: Update On Asbestos Litigation; Stay Cautious," December 7, 2001.

> be significantly greater than our previous expectations. From a value standpoint, it is arguable that the stock is still quite undervalued .... When all is said and done, we still believe that our analysis and our conclusions are reasonable. However, the current climate is sufficiently uncertain to merit more caution on our part. If we were to see several signs that would allow us to believe that the liability is confinable at the level of our previous analysis, we would be inclined to re-evaluate the stock. Since the value gap that results from our previous analysis is so great, we are not uncomfortable missing some of the initial upside if we wait for better signals.[91]

79. On December 7, 2001, Halliburton's stock price declined 42.4%, to close at $12.00. The company-specific return that day is negative 42.7%, a statistically significant decline. Trading volume was almost 77 million shares that day, more than 22 times the average daily trading volume for Halliburton stock during the Class Period. Several news articles attributed the decline in Halliburton's stock price on December 7 to the recent asbestos disclosures.[92]

---

COUNSEL FOR DEFENDANT HALLIBURTON COMPANY

Appendix C

[TABLES INTENTIONALLY OMITTED]

The Court should deny Lead Plaintiff Archdiocese of Milwaukee Supporting Fund, Inc.'s ("AMSF") Motion for Class Certification ("Motion"). As in two recent decisions of the Fifth Circuit and the Northern District of Texas, the proposed class fails because AMSF has failed to prove loss causation by a preponderance of the admissible evidence. *Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261, 262, 269 (5th Cir. 2007); *Ryan v. Flowserve Corp.*, __ F.R.D. __, No. 3:03-CV-1769-B, 2007 WL 3357692, at *8 (N.D. Tex. Nov. 13, 2007) (Boyle, J.). The Expert Report of Jane Nettesheim—AMSF's only evidence of loss causation—fails to satisfy loss causation requirements in the Fifth Circuit and is based on unreliable methodology and analysis. Nettesheim repeatedly admits that she did not conduct the type of inquiry the Fifth Circuit requires, and the evaluation she did conduct fails to meet basic standards for experts in her field.[1] AMSF's Motion also fails because the proposed class representatives, Ben Alan Murphey and AMSF, do not satisfy the requirements of adequacy and typicality under Federal Rule of Civil Procedure 23.

LEAD PLAINTIFF'S BURDEN OF PROOF

The issue of class certification should not be considered lightly. In *Oscar*, Judge Higginbotham recently noted

1. *See* Defendants' Motion to Strike the Report of Jane Nettesheim ("Motion to Strike"), filed contemporaneously with this Response and fully incorporated herein.

the "lethal force of certifying a class of purchasers of securities enabled by the fraud-on-the-market doctrine." *Oscar*, 487 F.3d at 262. A court must conduct a "rigorous analysis" to determine whether there is sufficient evidence to satisfy each of the requirements of class certification. *Unger v. Amedisys Inc.*, 401 F.3d 316, 320 (5th Cir. 2005). In doing so, a court must look beyond the pleadings to "understand the claims, defenses, relevant facts, and applicable substantive law in order to make a meaningful determination of the certification issues." *Castano v. Am. Tobacco Co.*, 84 F.3d 734, 744 (5th Cir. 1996); *Griffin v. GK Intelligent Sys., Inc.* 196 F.R.D. 298, 300 (S.D. Tex. 2000).

AMSF bears the burden of establishing each requirement of Rule 23 and is entitled to no presumptions. *Unger*, 401 F.3d at 321 ("The plain text of Rule 23 requires the court to 'find,' not merely assume, the facts favoring class certification."); *see also Berger v. Compaq Computer Corp.*, 257 F.3d 475, 481 (5th Cir. 2001); *Gen. Tel. Co. v. Falcon*, 457 U.S. 147, 160 (1982). "Unsupported allegations that the case satisfies the requirements of Rule 23 are an insufficient basis for certifying a class action." *Kase v. Salomon Smith Barney, Inc.*, 218 F.R.D. 149, 152 (S.D. Tex. 2003). If AMSF has not satisfied the requirements for class certification, it is improper to certify a class on the possibility that it might make the required showing at a later stage in the litigation.[2]

---

2. *See Oscar*, 487 F.3d at 268 ("[A] district court must resolve factual disputes relevant to each Rule 23 requirement and find that whatever underlying facts are relevant to a particular Rule 23 requirement have been established. . . . The obligation to make such determinations is not lessened by overlap between a Rule 23 requirement and a merits issue . . . .") (internal citations

Rule 23's requirements include that: (1) the proposed class is so numerous that joinder of all members is impracticable; (2) there are questions of law or fact common to the proposed class; (3) the claims or defenses of the representatives are typical of those of the proposed class; and (4) the representative parties will fairly and adequately protect the interests of the proposed class. FED. R. CIV. P. 23(a). Under Rule 23(b)(3), AMSF must also show that common questions of law or fact "predominate over" individual issues and that a "class action is superior to other available methods for the fair and efficient adjudication of the controversy." *Id.* at 23(b)(3).

To satisfy Rule 23(b)(3), AMSF relies on the fraud-on-the-market presumption, without which individual issues of reliance would predominate and the class would fail. The reliance element of a plaintiff's securities claim is presumed for a company whose shares are traded in an efficient market. *Basic Inc. v. Levinson*, 485 U.S. 224, 244 (1988). Under the Fifth Circuit's interpretation of *Basic*, classwide reliance is presumed if there is proof that: "(1) the defendant made public material misrepresentations, (2) the defendant's shares were traded in an efficient market, and (3) the plaintiff[] traded shares between the time the misrepresentations were made and the time the truth was revealed." *Greenberg v. Crossroads Sys., Inc.*, 364 F.3d 657, 661 (5th Cir. 2004). To benefit from the presumption of reliance, however, a plaintiff must also prove that the material "misstatement *actually moved* the

---

omitted); *Castano*, 84 F.3d at 742 ("Given the plaintiffs' burden, a court cannot rely on assurances of counsel that any problems . . . can be overcome.").

market" and therefore caused the alleged losses. *Oscar*, 487 F.3d at 265; *see also Greenberg*, 364 F.3d at 665. The Fifth Circuit thus requires "plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption." *Oscar*, 487 F.3d at 265.

Recognizing the gravity of certifying a securities class action relying on the fraud-on-the-market presumption, the Fifth Circuit has held that the district court must make a "find[ing]" that "loss causation [is] established at the class certification stage." *Id.* at 269. Elaborating on the reasons for this requirement, the Fifth Circuit stated:

> In short, the efficient market doctrine facilitates an extraordinary aggregation of claims. We cannot ignore the *in terrorem* power of certification, continuing to abide the practice of withholding until "trial" a merit inquiry central to the certification decision, and failing to insist upon a greater showing of loss causation to sustain certification, at least in the instance of simultaneous disclosure of multiple pieces of negative news. Nor is there sound reason for an early "tentative" certification, which leaves loss causation for later more focused examination.

Id. at 267. Under *Oscar*, it is AMSF's burden to establish, and the Court must find, loss causation by a preponderance of the evidence. *Id.* at 269. Absent such a finding, the proposed class cannot rely on the fraud-on-the-market presumption, and the class therefore fails. *Id.*; *Flowserve*, 2007 WL 3357692, at *8, *16.

Appendix C

BACKGROUND

The Fourth Consolidated Class Action Complaint ("Fourth Complaint") alleges that a class of plaintiffs suffered damages because Halliburton's "financial falsifications and other misleading statements" inflated Halliburton's stock price throughout the class period from June 3, 1999 to December 7, 2001.[3] Specifically, AMSF's Motion premises its argument on alleged misrepresentations concerning: (1) the success of its acquisition of Dresser Industries, Inc., including projected cost savings from the integration of Dresser's and Halliburton's operations; (2) its accounting for unapproved claims (claims that were in the process of being negotiated with customers); and (3) the Company's liability for asbestos lawsuits.[4]

AMSF's own expert, however, affirmatively disproved the most basic element of securities fraud—inflation of the stock price. For example, she could not identify any instances before April 2001 when Halliburton's stock price increased in connection with a Company announcement in a way significantly different from an index of similar companies.[5] AMSF made all its purchases prior to this date, and the other proposed class representative, Ben Alan Murphey, made all his purchases and sales prior to

---

3. Fourth Compl. ¶ 3.

4. *See* Motion at 3-8.

5. AMSF App. 96 (Nettesheim Rep. ¶ 53); App. 49 (Nettesheim Dep. 77).

that date.[6] Neither AMSF nor its expert contend that the two instances of a stock price increase in the over 600-day class period provide any support whatsoever to their failed attempt to prove loss causation. The expert also fails to link any corrective disclosure causing a decline in the stock price with a prior misstatement by Halliburton or Lesar. The timing and content of Halliburton's disclosures demonstrate the absence of loss causation and AMSF's failure to prove the requirements of class certification.

I. The only two alleged class period representations regarding the Dresser merger merely repeated information disclosed to the market before the class period.[7]

AMSF alleges two class period statements regarding Dresser; both statements, if even actionable, merely repeat nonactionable statements prior to the class period.[8] Lesar's alleged September 13, 1999 projection that the

---

6. App. 15-18 (AMSF Dep. 115-17; 120; 125-27); App. 39, 42-44 (Murphey Dep. 152-53; 165-66; 171).

7. The Fifth Circuit has held that only non-confirmatory statements—those that disclose information not already known to the market—can provide the basis for loss causation. *Greenberg*, 364 F.3d at 663; *see also Flowserve*, 2007 WL 3357692, at *10 (holding that confirmatory statements are not "capable of moving the market" and provide no support for loss causation).

8. As the Motion demonstrates, the statement that the Dresser merger was a "win" for shareholders was made in 1998, and claims based on that statement are time-barred. *See* Motion at 6; March 14, 2006 Order at 3.

Dresser merger would result in "annual benefits of $500 million" mirrored a report issued on March 1, 1999—three months before the class period began.[9] Likewise, Cheney's statement in paragraph 122 of the Fourth Complaint describing the successful merger and integration of Dresser confirmed pre-class period statements that projected positive and synergystic effects of the merger and integration.[10] There is no evidence that Halliburton's stock price reacted to these alleged representations. As AMSF's own expert admits, "successive announcements of the same information will have no additional effect on share price."[11]

II. Halliburton's disclosures regarding accounting for unapproved claims were not accompanied by any decline in Halliburton's stock price.

An understanding of Halliburton's various business segments is instructive in evaluating AMSF's claim of loss causation regarding the unapproved claims allegations. The Fourth Complaint and AMSF's Motion frequently refer generally to the Company's engineering and construction operations when discussing the unapproved claims allegations. As detailed below, however, the major fixed-price construction projects on which the Company accrued unapproved claims were not part of

---

9. *Compare* Fourth Compl. ¶ 115 *with id.* ¶ 93 (quoting report that "[c]ost savings from the merger . . . should yield over $500 million").

10. *See, e.g., id.* ¶¶ 83-84.

11. AMSF App. 18 (Nettesheim Rep. ¶ 40).

the Company's Engineering Construction Group. For that reason, disclosures related generally to engineering and construction, or "E&C," do not necessarily relate, as AMSF and Nettesheim suggest, to the unapproved claims allegations.

Halliburton is one of the world's largest providers of services and products to the energy industry.[12] During the proposed class period from June 3, 1999 to December 7, 2001,[13] Halliburton provided two types of services—energy services and engineering and construction services.[14] The Company's Energy Services Group serviced companies involved in the exploration, development, and production of oil and gas.[15] Until 2001, one of the Energy Services Group's business units, Brown & Root Engineering Services ("BRES"), provided engineering and construction services, such as oil-field development, to the *upstream* oil and gas industry.[16] With the exception of BRES, the Energy Services Group provided non-construction related energy services.[17]

13. The Court previously dismissed "all claims asserted by Plaintiffs for actions of any Defendant predating June 3, 1999" as time-barred. March 14, 2006 Order at 3.

14. *See* App. 100-01 (June 2001 Form 10-Q at 5-6).

15. *See* App. 101 (June 2001 Form 10-Q at 6).

16. App. 72 (1999 10-K at 2); *see infra* note 20

17. App. 71-73 (1999 10-K at 1-3).

Appendix C

The Company's Engineering and Construction Group, which included the Kellogg Brown & Root ("KBR") and Brown & Root Services business units, provided engineering and construction services to *downstream* energy customers involved in processing and refining petroleum, and to non-energy and governmental customers involved in such industries as mining and forestry.[18] At the end of 2000, the Company announced plans to combine its engineering and construction operations into one company, KBR, reporting as the Engineering and Construction Group.[19] As a result of this reorganization, the BRES business unit was moved from the Energy Services Group to the Engineering and Construction Group.[20]

To support loss causation, AMSF points to unapproved claims allegations in the Fourth Complaint that pre-date the reorganization of Halliburton's construction operations in 2001.[21] The major projects for which Halliburton accrued unapproved claims were BRES projects.[22] At the time, BRES was a part of Halliburton's Energy Services

---

18. App. 73-74 (1999 10-K at 3-4).

19. *See* App. 114-16 (Dec. 21, 2000 Press Release, *Halliburton Announces New Structure and Engineering and Construction Charges*).

20. *See id.*; App. 100 (June 2001 Form 10-Q at 5).

21. *See* Motion at 1-5.

22. *See SEC v. Morris*, No. Civ. A. H-04-3096, 2007 WL 614210, at *1 (S.D. Tex. Feb. 26, 2007).

Group, not its Engineering and Construction Group.[23] Thus, any disclosures concerning the non-construction related services of the Energy Services Group and the downstream construction operations of the Engineering and Construction Group have little, if any, relevance to the unapproved claims allegations.

Prior to the class period, Halliburton's BRES unit began to recognize revenue from unapproved claims when the revenue was deemed probable of recovery and the amount could be estimated.[24] Accordingly, in its 1998 Form 10-K, issued before the class period, Halliburton deleted a statement in prior reports that the Company's claims for additional compensation were recognized when resolved.[25] Allegations regarding this change, the propriety of the amounts recorded, or other unapproved claims disclosures referenced on pages 3-4 of AMSF's Motion predate the class period, are barred by limitations, and thus provide no basis for class certification or any claim in this litigation.[26] *See* March 14, 2006 Order at 3 (dismissing as time-barred all claims based on pre-June 3, 1999 conduct).

---

23. *See* App. 65 (1998 Form 10-K at 1).

24. *See Morris*, 2007 WL 614210, at *2.

25. App. 66 (1998 Form 10-K at 26).

26. The Paine Webber Energy Conference and subsequent analyst reports referenced on pages 4-5 of the Motion did not occur on June 9, 1999 as the Motion states. Rather, according to the Fourth Complaint, that conference occurred on February 9, 1999, and the related analyst reports were released in February and March 1999, all well before the class period. *See* Fourth Complaint ¶¶ 91-93.

Appendix C

In March 2000, Halliburton's 1999 Form 10-K specifically informed shareholders that "[c]laims and change orders, which are in the process of being negotiated with customers, for extra work or changes in the scope of work are included in revenue when collection is deemed probable."[27] At the same time, Halliburton also disclosed in the notes to its financial statements that its unbilled receivables included $89 million in unapproved claims in 1998 and $98 million in 1999.[28] As AMSF's own expert demonstrates, however, these disclosures regarding the accounting change and its effect had no impact on the price of Halliburton stock.[29] There was no statistically significant change in the stock price following the March 2000 disclosure.[30]

III. Halliburton accurately disclosed its asbestos liability for pending claims.

Halliburton made meaningful and truthful disclosures during the class period concerning its expected liability for

---

27. App. 76 (1999 Form 10-K at 34); *see also* App. 82 (2000 Form 10-K at 28); App. 88 (2001 Form 10-K at 35).

28. *See* App. 76 (1999 Form 10-K at 34); *see also* App. 82 (2000 Form 10-K at 28 ($113 million)); App. 88 (2001 Form 10-K at 35 ($234 million)).

29. *See* AMSF App. 124 (Nettesheim Rep., Ex. 3 at 8) (showing that the stock price *increased* following the release of the 1999 10-K on March 30, 2000). Although the Fourth Complaint alleges that the March 2000 disclosure was partially misleading, AMSF does not contend loss causation exists as to this allegation, for which there is no alleged corrective disclosure causing any decline in the stock price.

30. AMSF App. 124 (Nettesheim Rep., Ex. 3 at 8).

pending asbestos claims. Halliburton informed investors both quarterly and annually of the actual number of then-pending asbestos claims and the precise amount of reserves Halliburton had accrued for those claims.[31] Far from downplaying its asbestos liability, Halliburton regularly reported estimates of multiple millions of dollars.[32] Halliburton's estimates were predictive in nature, and the Company expressly warned that future events could negatively affect its estimates: "We recognize the uncertainties of litigation and the possibility that a series of adverse court rulings . . . could materially impact the expected resolution of asbestos related claims."[33]

Thus, Halliburton cautioned investors both in formal disclosures and in press releases that if actual amounts paid on claims or recovered from insurance companies differed from projections, it may have to take a loss. Before the class period, for example, Halliburton disclosed a dispute with a former Dresser affiliate, Harbison-Walker, related to its contractual obligation to indemnify Dresser for certain asbestos claims.[34] Further, in June 2001, the Company issued a press release announcing that its potential asbestos liability could increase by at least $50-60 million because Harbison-Walker had asked Dresser for

---

31. *See* App. 77-78 (1999 Form 10-K at 43-44); App. 83 (2000 Form 10-K at 37); App. 96 (June 2000 Form 10-Q at 10).

32. *See* App. 72-78 (1999 Form 10-K at 43-44); App. 83 (2000 Form 10-K at 37).

33. App. 84 (2000 Form 10-K at 38).

34. App. 67 (1998 Form 10-K at 39).

financial assistance in meeting its indemnity obligations.[35] There is no allegation in the Fourth Complaint—and certainly no evidence—that Harbison-Walker required Dresser's assistance prior to this disclosure. Additionally, in late 2001, Halliburton told investors about a recent judgment and two jury verdicts, which were significant departures from the Company's previous experience concerning its asbestos liability.[36] There is no evidence of any prior representation regarding the potential outcomes of these lawsuits. Rather, disclosure of them was in line with the Company's previous warning that a series of such results "could materially impact" its expectations regarding resolutions of its asbestos claims.[37]

AMSF's Motion misconstrues the content of the Company's asbestos disclosures in an attempt to fabricate a misrepresentation. AMSF contends that Halliburton falsely represented that it had "adequately reserved for *potential* asbestos liability."[38] Halliburton plainly and repeatedly disclosed, however, that its reserves were only for *pending* claims and that *reserves were not accrued for potential claims* that might be filed in the future.[39]

36. App. 121-23 (Dec. 7, 2001 Press Release, *Halliburton Comments on Asbestos Judgments*).

37. *See* App. 78 (1999 Form 10-K at 44).

38. Motion at 6 (emphasis added).

39. App. 83 (2000 Form 10-K at 37); App. 92 (March 2000 Form 10-Q at 10); App. 96 (June 2000 Form 10-Q at 10).

AMSF provides no evidence in the form of analyst statements or otherwise that investors somehow believed that Halliburton's reserves were for anything other than pending claims.

ARGUMENT

I. Class certification must be denied because AMSF has failed to prove loss causation.

In *Oscar*, the Fifth Circuit expressly held that "loss causation must be established at the class certification stage by a preponderance of all admissible evidence." *Oscar*, 487 F.3d at 269. "[A]ny showing that severs the link between the misrepresentation and the plaintiff's loss," including the absence of any element of loss causation, "rebuts on arrival the plaintiff's fraud-on-the-market theory." *Id.* at 265 (internal quotation marks omitted). If the fraud-on-the-market presumption fails, questions of individual reliance by each class member then predominate, and a motion for class certification must be denied. *Id.* at 271; *Flowserve*, 2007 WL 3357692, at * 7.

AMSF has not met and cannot meet its burden to prove loss causation. Specifically, AMSF must show that an alleged misstatement "*actually* moved the market." *Oscar*, 487 F.3d at 265. In other words, there must be proof that the alleged misrepresentations inflated the stock price, which later decreased when the truth was revealed. *See Greenberg*, 364 F.3d at 665. Courts in the Fifth Circuit have held that plaintiffs must prove the fraud's effect on the market in at least one of two ways: (1) "an increase in

stock price immediately following the release of positive information";[40] or (2) proof of "actual negative movement in the stock price following the release of the alleged 'truth' of the earlier misrepresentation." *Id.*; *Flowserve*, 2007 WL 3357692, at *10. Additionally, when multiple pieces of information are released contemporaneously with the corrective disclosure, there must be empirical proof that the corrective disclosure, as opposed to other unrelated information, caused a significant amount of the decline in stock price. *Oscar*, 487 F.3d at 270-71; *Greenberg*, 364 F.3d at 666.

AMSF's only proof of loss causation is Nettesheim's report, which fails to demonstrate loss causation:

• Nettesheim admitted that she "did not find any statements by Halliburton which had a statistically significant positive impact on Halliburton's stock price" except for April and June 2001 earnings releases that Nettesheim does not link to any subsequent corrective disclosure.[41]

• To the extent Nettesheim identified any "corrective" disclosure causing a statistically significant decline in the stock price, she admitted repeatedly that she "didn't . . . match[] particular prior statements to [such alleged corrective] disclosures."[42]

---

40. Proof of stock price inflation is a necessary, but not sufficient, component of loss causation. *See infra* note 46.

41. App. 49 (Nettesheim Dep. 77).

42. App. 54 (Nettesheim Dep. 121); *see also* App. 57, 58, 59A, 59B, 60A (Nettesheim Dep. 137, 138, 164-65, 167, 168, 180).

• Nettesheim did not attempt to analyze what portion of any statistically significant stock price decline was attributable to Halliburton's correction of a potentially actionable prior disclosure (as opposed to the simultaneous disclosure of other nonactionable, negative news). In fact, although she explained she has conducted such an empirical inquiry in the past, she "was not asked to do" so in this case.[43]

In addition to expressly rejecting the very standards the Fifth Circuit has imposed for loss causation, Nettesheim's report and testimony fails to satisfy the basic requirements of reliability for experts in her field.[44] Nettesheim claims to have conducted an "event study"—a method of determining the effect of an event on a company's stock price—but she fails even to follow the methodology of the experts that she cites in her report.[45] Because AMSF has failed to meet its burden of proving that Halliburton's alleged misrepresentations caused any losses during the class period, class certification must be denied.

---

43. App. 51 (Nettesheim Dep. 91-92).

44. *See* Motion to Strike at 2-10 (including in its Appendix the Expert Report of Dr. Lucy Allen of NERA).

45. *See* Motion to Strike at 3-4. This and other methodological problems with Nettesheim's report are reviewed in detail in the Motion to Strike and provide independent grounds for the Court to deny class certification.

Appendix C

A. AMSF failed to prove that any class period misrepresentation inflated Halliburton's stock price.

Loss causation requires a plaintiff to show that the defendant made an actionable, nonconfirmatory, positive statement that inflated the stock price. *Greenberg*, 364 F.3d at 666. To meet this requirement, plaintiffs "ordinarily show[] an increase in stock price immediately following the release of positive information."[46] *Id.* at 665; *see also Nathenson v. Zonagen, Inc.*, 267 F.3d 400, 419 (5th Cir. 2001); *In re Zonagen, Inc. Sec. Litig.*, 322 F. Supp. 2d 764, 775-82 (S.D. Tex. 2003).

The premise of AMSF's entire case is that Halliburton's stock traded at prices significantly inflated because of multiple misrepresentations throughout the class period.[47] Yet AMSF's expert—who provides AMSF's only proof of loss causation—examined every single day in the class period and found only two instances of a statistically significant stock price increase that she connected to

---

46. Proof that the misrepresentation caused inflation of the stock price is a necessary, but not sufficient, component of loss causation. *Flowserve*, 2007 WL 3357962, at *10 (holding that evidence of disclosures accompanying stock price increases were no evidence of loss causation because "there was no statistically significant price reaction" and "[w]ithout any price reaction, particularly a negative one, no investor could have suffered a loss"); *Zonagen*, 322 F. Supp. 2d at 781 ("Merely showing that the stock price was inflated when plaintiff purchased it, however, is not sufficient to demonstrate loss causation.").

47. Fourth Compl. ¶ 3.

any Company-specific information.[48] Both instances were late in the class period, and neither AMSF's Motion nor Nettesheim's Report even contends that these instances demonstrate loss causation.[49] Nettesheim essentially disproves the entire premise of AMSF's case. Her failure to demonstrate the central aspect of any securities case—that a misrepresentation inflated the stock price—is a fatal flaw. *See, e.g., Zonagen*, 322 F. Supp. 2d at 775-82 (granting summary judgment for defendant because the plaintiffs' expert failed to present any evidence that the alleged misrepresentation at issue inflated the defendant's stock price).

B. AMSF does not prove any link between a potentially actionable, nonconfirmatory misrepresentation and corrective disclosure that reveals its falsity and causes a decline in the stock price.

AMSF attempts to prove loss causation through the second method the *Greenberg* court identified: linking "an

---

48. AMSF App. 96, 99 (Nettesheim Rep. ¶¶ 53, 59).

49. *See* Motion at 19-23; AMSF App. 37-66 (Nettesheim Rep. ¶¶ 79-134). These instances occurred at the tail end of the class period in April and July 2001, and Nettesheim does nothing to link them to any corrective disclosure of any alleged culpable information causing a decline in the stock price. They therefore cannot serve as any basis for loss causation. *See Flowserve*, 2007 WL 3357962, at *10 (holding that earnings statements accompanying a stock price increase provided no evidence of loss causation because there was no relationship between them and subsequent price drops).

allegedly false, non-confirmatory positive statement" with "negative 'truthful' information" that later "caus[es] the decrease in [the stock] price." *Greenberg*, 364 F.3d at 666. AMSF's Motion looks solely to Nettesheim's testimony to satisfy this requirement. Nettesheim, however, admitted during her deposition that she did not conduct the required analysis. She explained repeatedly that she "didn't . . . match[] particular prior statements to [alleged corrective] disclosures."[50]

1. Nettesheim failed to isolate any actionable misrepresentations, and AMSF's reliance on confirmatory and other nonactionable statements to support loss causation is contrary to Fifth Circuit authority.

The *Greenberg* and *Flowserve* cases demonstrate the proper procedure for linking an alleged corrective disclosure with a prior actionable misrepresentation. The first step is to isolate the alleged actionable, nonconfirmatory misstatements. *Id.* at 666 ("Of the alleged misrepresentations made by Crossroads regarding the features of its products, only those made on [particular dates] are non-confirmatory and therefore actionable."); *see also Zonagen*, 322 F. Supp. 2d at 778-81 (granting summary judgment because plaintiff's expert failed to demonstrate a link between the corrective disclosure and an actionable misrepresentation, as opposed to an alleged misrepresentation that did not survive the motion to dismiss). Thus, at "the threshold of class certification,"

50. App. 53 (Nettesheim Dep. 121); *see also* App. 57, 58, 59A, 59B, 60A (Nettesheim Dep. 137, 138, 164-65, 167, 168, 180).

the *Flowserve* court "look[ed] for alleged falsehoods that are capable of moving the market." *Flowserve*, 2007 WL 3357692, at *10. The court then held that almost half of the alleged misrepresentations were "confirmatory, had already been digested by the market, and [could not] serve as the basis for a fraud-on-the-market presumption." *Id.*

Nettesheim's entire analysis is flawed because she categorically refused to pinpoint any "particular statement" for which she claimed to have found loss causation.[51] Nettesheim's analysis merely references broad categories of allegations in the Fourth Complaint and does not identify specific representations made at any particular time by any particular Halliburton official.[52] Nettesheim thus failed to complete the first essential step of the analysis under *Greenberg* and *Flowserve*.

---

51. App. 52A (Nettesheim Dep. 114); *see also* App. 57, 58 (Nettesheim Dep. 137, 138); App. to Motion to Strike (Allen Report at 15-18, 29-31, 33-39).

52. AMSF App. 39-65 (Nettesheim Rep. ¶¶ 82-132). Nettesheim conducted her statistical analysis backwards. Rather than starting with the potentially actionable misrepresentations and corrective disclosures alleged in the Fourth Complaint and determining whether they caused a statistically significant movement of the stock, Nettesheim analyzed each and every day during the nearly 3-year-long class period to find any day on which the stock had a statistically significant movement. As to all of those days, she then combed the news sources to see if she could find any disclosure relating in any fashion to any topic at issue in the Fourth Complaint. This methodology is unreliable and contrary to the very authority Nettesheim cites in her own report. *See* Motion to Strike at 3-4.

Appendix C

Setting aside Nettesheim's failure to identify *any* specific misrepresentations, even AMSF's Motion plainly argues that loss causation exists as to alleged misrepresentations that the Court has previously dismissed and to non-actionable confirmatory statements. Almost all of the alleged misrepresentations regarding unapproved claims to which AMSF points (including those it describes on pages 3-4 of its Motion) predate June 3, 1999, are time-barred, and do not provide any basis for loss causation.[53] *See* March 14, 2006 Order at 3 (dismissing as time-barred all claims based on pre-June 3, 1999 conduct). AMSF also relies on several time-barred statements related to the Dresser merger and asbestos in its Motion.[54] These statements (and any allegations in paragraphs 64-107 in the Fourth Complaint) cannot serve the basis of loss causation. *Id.* Similarly, AMSF's Motion points only to

---

53. In fact, all of the claims asserted in the Fourth Complaint are time-barred and cannot support loss causation. The Fourth Complaint alleges in no uncertain terms that there was a "shocking public revelation" of Halliburton's prior alleged fraudulent conduct on October 24, 2000. Fourth Compl. ¶ 31; *see also id.* ¶¶ 144-45. Nettesheim also states that there was a statistically significant drop in the stock price following what she claims to be corrective disclosures on October 25 and December 22, 2000. Plaintiffs were then required to "proceed with a reasonable and diligent investigation" and file a complaint no later than October 24, 2001. Because the first complaint was not filed until June 3, 2002, all of the claims are time-barred. *See* March 14, 2006 Order at 3 (dismissing as time-barred all claims based on pre-June 3, 1999 conduct).

54. Motion at 6-7 (citing ¶¶ 8, 88, 101 of the Fourth Complaint, all of which pre-date June 3, 1999).

two statements in the class period concerning the success of the Dresser merger.[55] These statements, however, are confirmatory and therefore not actionable. *See supra* p. 5; *Greenberg*, 364 F.3d at 666; *Flowserve*, 2007 WL 3357692, at *10. To summarize, there can be no loss causation as to: (1) almost all of the unapproved claims allegations to which AMSF's Motion points; (2) the pre-June 3, 1999 asbestos-related statements; (3) and all of the Dresser merger-related statements.[56]

Additionally, neither AMSF's Motion nor Nettesheim's Report even mentions the hodgepodge of alleged "accounting irregularities" in paragraphs 247-87 of the Fourth Complaint, let alone attempt to prove loss causation with respect to them. As a result, these claims cannot provide any basis for class certification.

---

55. Motion at 7.

56. Only misrepresentations for which the Fourth Complaint properly alleges materiality, falsity, and scienter are potentially actionable for the purposes of loss causation. *See Zonagen*, 322 F. Supp. 2d at 777, 779; *see also Flowserve*, 2007 WL 3357962, at *7 ("The predominance query begins with a review of the basic elements of a § 10(b) and Rule 10b-5 actions . . . [which include] (1) a misstatement or omission; (2) of a material fact; (3) made with scienter; (4) on which they *relied*; and (5) that proximately caused their injuries"). For example, any alleged misrepresentations attributed only to the former individual defendants are not actionable because the Court has held that the Fourth Complaint does not demonstrate that those statement were uttered with scienter. *See* Fourth Compl. ¶¶ 28, 38, 46, 132, 175, 181, 183, 185 (all containing statements attributed only to defendants that have been dismissed).

2. Nettesheim's claimed corrective disclosures do not reveal the falsity of any prior misrepresentation and therefore do not support loss causation.

The next task is to determine whether there is a link between any remaining misstatements and a later corrective disclosure that (1) revealed the falsity of the prior statement; and (2) caused a decrease in the stock price. *Greenberg*, 364 F.3d at 666-67; *Flowserve*, 2007 WL 3357692, at *11-15. Under *Greenberg*, the necessary relationship between the corrective disclosure and the earlier misstatement is satisfied only if the corrective disclosure "specifically reveal[s]" the prior misstatement. *Greenberg*, 364 F.3d at 666.

Proof that a disclosure merely concerns the same general subject as the supposed misrepresentation is no evidence that the later disclosure is *corrective*. For example, in *Greenberg*, the plaintiffs alleged that the defendants made a number of misrepresentations related to its business of designing, manufacturing, and selling storage routers. An alleged misrepresentation regarding router speed, however, was not actionable because the alleged corrective disclosure discussed problems with a competitor in the router business and reported that earnings would be below analysts expectations, but made "no reference to increased router speed." *Id.* at 667. Likewise, there was no proof of loss causation as to misrepresentations regarding *first* quarter results and *second* quarter analyst expectations because the alleged corrective disclosure mentioned only expected

third quarter earnings. *Id.* Thus, even if the disclosure discusses the same concept or business as the prior misrepresentation, it is not a corrective disclosure unless it "specifically" corrects the prior misrepresentation and reveals the "truth[]." *Id.* at 666; *Flowserve*, 2007 WL 3357692, at *11-12 (holding that revised earnings per share guidance was not sufficiently related to a previous alleged misrepresentation discussing projected earnings per share because it did not reveal any prior fraud); *Congregation of Ezra Sholom v. Blockbuster, Inc.*, 504 F. Supp. 2d 151, 167-68 (N.D. Tex. 2007) (dismissing suit because plaintiff failed to "explicitly allege a corrective disclosure—*i.e.*, a statement that corrects a previous misrepresentation or discloses a prior omission").

The *Flowserve* court further elaborated on the requirement that a corrective disclosure must reveal the prior fraud. The court rejected an expert's claim that acute drops in the stock price reveal the "true financial condition" of a company and are proof loss causation "even if the fraudulent conduct itself is not revealed." *Flowserve*, 2007 WL 3357692, at *13. Under that expert's logic, the court explained, "a plaintiff . . . with debatable evidence of fraud can pick the largest stock drop irrespective of the actual reason and still relate the fraud" to a prior disclosure. *Id.* The court held that this approach to loss causation would "undermine the objectives of securities law and disregard[] precedent" in *Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336 (2005) and *Greenberg*. *Id.*

Additionally, the court held that even if the alleged "corrective disclosure" had a "*negative* effect on the

price of [the] stock," that alone does not "demonstrate a *corrective* effect on the price of [the] stock." *Id.*, at *18-19 (emphasis in original). The *Flowserve* court found analysis from the Southern District of New York instructive on the distinction between a *negative* disclosure and a *corrective* disclosure:

> The fact that an event—in this case, a failure to meet earnings forecasts or a statement foreshadowing such a failure—disabused the market of that belief [that the securities were valuable] does not mean that the event disclosed the alleged scheme to the market. In other words, a failure to meet earnings forecasts has a *negative* effect on stock prices, but not a *corrective* effect. Such a failure does not imply that defendants concealed a scheme to depress earnings estimates and drive up prices. It does not disclose the scheme; therefore, it cannot correct the artificial inflation caused by the scheme.

Id., at *18 n.31 (quoting *In re Initial Pub. Offering Sec. Litig.*, 399 F. Supp. 2d 261, 266 (S.D.N.Y. 2005) (emphasis in original)). Under *Greenberg* and *Flowserve*, it is not enough that the disclosure mentions the same subject matter as the prior alleged misrepresentation omission and causes a decline in the stock price. AMSF must also prove that the disclosure actually revealed the prior fraud to the market. *See Flowserve*, 2007 WL 3357692, at *13, *19.

Nettesheim's approach to loss causation is directly contrary to this standard. Just as the expert in *Flowserve*, she premises her entire analysis on the invalid theory that disclosures, which she concedes do not reveal the alleged fraud, are somehow "corrective."[57] She attempts to prove loss causation through "partial disclosures of information," which "changed investors' perceptions of the *true value of Halliburton*," but that "*did not admit the alleged fraud.*"[58] Under *Greenberg* and *Flowserve*, her "true value of Halliburton" theory is no evidence of loss causation and, if accepted, would undermine the objectives of the securities laws. *Id.*, at *13 (rejecting expert's similar "true financial health" theory).

Even when Nettesheim attempts to link alleged corretive disclosures to prior (but unspecified) misrepresentations, her approach is contrary to Fifth Circuit authority. Nettesheim identifies 24 days during the class period with statistically significant decreases in Halliburton's stock price.[59] As to those 24 dates, Nettesheim identifies only eight involving a statement by Halliburton (as opposed to news about a competitor, oil prices, or other such information not specific to the

57. *See* App. to Mot. to Strike (NERA Report at 15-18, 29-31, 33-39).

58. AMSF App. 36 (Nettesheim Rep. ¶ 77) (emphasis added); *see also* AMSF App. 35 (Nettesheim Rep. ¶ 75) (admitting that in her view "[t]he corrective disclosure has a causal link to the alleged misrepresentations even though the company had not admitted to prior misrepresentations or to fraud").

59. AMSF App. 19 (Nettesheim Rep. ¶ 42).

Company).[60] As to each such date, she nakedly asserts that a Company disclosure, regardless of its content, has some unspecified relationship with the general subjects of the Complaint, such as unapproved claims, asbestos liability, or the Dresser merger.[61] For example, in answering a deposition question about the link between the December 2000 stock price decline and a prior misrepresentation, she stated:

> Q. [I]n your mind, [the December 2000 press release, which contained multiple pieces of news[62]] is a corrective disclosure or partial corrective disclosure of what statements made by Halliburton?
>
> A. This is related to the – what's generally called the unapproved claims or the cost overruns in the engineering and construction units.
>
> Q. And how in your mind is it related to the unapproved claims issue?
>
> A. It's my understanding that those relate to cost overruns.

---

60. AMSF App. 20-23 (Nettesheim Rep. ¶ 45). It is unclear if AMSF is alleging loss causation as to each of these eight dates. AMSF's Motion only refers to four of the dates. *See* Motion at 2.

61. AMSF App. 42-43, 46, 52, 56-57, 65 (Nettesheim Rep. ¶¶ 87, 92, 105, 112, 132); see also App. to Motion to Strike (Allen Report at 15-18, 29-31, 33-39).

62. *See infra* pp. 27-28.

> Q. And I take it in your mind if there is a negative stock price movement of a statistically significant amount, and in the day preceding that movement there was some company announcement about fixed price contracts, whatever it may be, that is a sufficient relationship in your mind to make this a corrective disclosure or partial corrective disclosure?
>
> A. In this case, yes.[63]

Nettesheim fails to demonstrate that any disclosure corrected and "specifically reveal[ed]" any particular prior misrepresentation.[64] *See Greenberg*, 364 F.3d at 666-67 (rejecting evidence of disclosure merely mentioning the same general subject as a prior misstatement as not probative of loss causation).

Like the expert in *Flowserve*, Nettesheim takes a "results-oriented approach," and "discount[s] inconvenient but relevant facts" along the way. *See Flowserve*, 2007 WL 3357962, at *12. For example, she reviewed an October 4, 1999 disclosure containing *positive* news about Dresser and claimed it somehow revealed alleged fraud concerning

---

63. App. 56 (Nettesheim Dep. 130-31); *see also* App. 53-54 (Nettesheim Dep. 119, 121, 124) (contending disclosures concerning asbestos, regardless of their content, correct all prior disclosures concerning asbestos).

64. *See* App. to Motion to Strike (Allen Report at 15-18, 29-31, 33-39).

the Dresser merger. The October 4, 1999 press release, which is not even mentioned in the Fourth Complaint, reported that Dresser had elected to sell its interest in two joint ventures and predicted that the sale would "result in net cash inflow of approximately $630 million which will be used to repay short-term debt" and "significantly strengthen[] Halliburton's balance sheet."[65] Analysts reacted to this news *positively*.[66] Nettesheim's conclusion that this information somehow corrected an unidentified prior fraudulent statement concerning the Dresser merger demonstrates the unreliability of her methodology and conclusions.[67]

Nettesheim's report is AMSF's only evidence of loss causation. Her opinions are premised on a theory that is directly contrary to Fifth Circuit authority, and her analysis demonstrates the absence of loss causation. Class certification must be denied.

C. AMSF provides no empirical evidence that the alleged corrective disclosures, as opposed to other unrelated news, caused a significant amount of the stock price decline.

When an alleged corrective disclosure is released with other negative news, a plaintiff must show "'that

---

65. App. 109-10 (October 4, 1999 Press Release, *Halliburton to Sell Two Joint Ventures, Announces Earnings Outlook*).

66. *See, e.g.*, App. 126-27 (October 4, 1999 Dow Jones Business News, *Halliburton Sells Stakes in Joint Venture for $1.1 Billion*).

67. See App. 60 (Nettesheim Dep. 175-76).

it is more probable than not that it was [the corrective disclosure of the alleged misrepresentation], and not other unrelated negative statements, that caused a significant amount of the decline.'" *Oscar*, 487 F.3d at 266 (quoting *Greenberg*, 364 F.3d at 666). Nettesheim failed to conduct this analysis. In fact, she admits that she "was not asked to do" so.[68]

The *Oscar* case demonstrates the rigor of this requirement. The issuer in that case, Allegience, was a national telecommunications provider. Claimants alleged that the defendants fraudulently misrepresented Allegiance's line-installation count. The defendants later restated the line-installation count in a disclosure containing various other items of bad news. *Id.* at 263. Plaintiff's expert conducted a study demonstrating that the company's stock price declined in a statistically significant amount after the disclosure. The Fifth Circuit vacated and remanded, however, holding that the expert's report did not establish loss causation, and the district court abused its discretion in certifying the class. *Id.* at 262, 270. The Fifth Circuit explained that "when unrelated negative statements are announced contemporaneous of a corrective disclosure, the plaintiff must prove that 'it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline.'" *Id.* at 270 (quoting *Greenberg*, 364 F.3d at 666).

---

68. App. 51 (Nettesheim Dep. 91-92); *see also* App. 50A (Nettesheim Dep. 89).

The Fifth Circuit also discussed the kind of proof necessary to meet this requirement. An event study showing only that the "stock reacted to the *entire bundle* of negative information" in the corrective disclosure is insufficient. *Id.* at 271. Rather, a plaintiff's evidence must be "empirically-based" and "more than well-informed speculation." *Id.* at 270-71. In *Oscar*, as here, the plaintiff's evidence of the amount of the stock price decline attributable to the revelation of the prior misstatement "consist[ed] chiefly of analyst commentary," which the court held was no evidence of loss causation. *Id.* at 270. Rather, the Fifth Circuit requires an "empirical" showing "that some percentage of the drop was attributable to the corrective disclosure" and "demands a peek at the plaintiff's damages model." *Id.* at 270-71.

Just as in *Oscar*, Nettesheim relied on the opinion of market analysts to supply the evidence that the stock price drop was attributable to the revelation of an alleged misrepresentation as opposed to other unrelated negative information.[69] Nettesheim, like the *Oscar* expert, failed to provide an "empirically-based" showing that Halliburton's stock price dropped in response to revelation of the prior misstatements, and not other negative news about the company. *Id.* at 270.[70] Her report therefore provides no evidence of loss causation; and under *Oscar*, the Court must refuse to certify the class.

---

69. App. 50A, 51 (Nettesheim Dep. 89-92)

70. *See also* App. to Motion to Strike (Allen Report at 22-27, 40-41).

D. Nettesheim neither links the eight alleged "corrective disclosures" to previously released nonconfirmatory information nor provides empirical evidence that they caused a significant portion of the decline in stock price.

Nettesheim repeated the very mistakes that the Fifth Circuit determined to be fatal in *Greenberg* and *Oscar*. She conducted a methodologically flawed analysis that neither links a corrective disclosure with a potentially actionable misrepresentation, nor proves that the stock price reacted negatively to correction of the alleged fraud as opposed to other items of bad news. *See Oscar*, 487 F.3d at 270-71; *Greenberg*, 364 F.3d at 666-67. Specifically, the following disclosures, the only support in her report for loss causation, cannot be construed as "corrective":

October 4, 1999. After the market closed on October 4, 1999, Halliburton issued a press release that, as Nettesheim admits, discusses multiple pieces of news.[71] The Fourth Complaint does not mention this press release

---

71. *See* App. 50 (Nettesheim Dep. 82). The October 4, 1999 press release relates to the following subjects, none of which are mentioned in the Fourth Complaint: (1) Dresser's election to sell its interests in two joint ventures; (2) under performance of the Dresser Equipment Group business segment; (3) lower than expected profits in Dresser Equipment Group's joint ventures and other business units; (4) 1999 third quarter results, which were affected by a decline in downstream Engineering and Construction business segment; (5) 1999 third quarter earnings in the Energy Service Group segment, which would remain flat to slightly up due to continued low spending levels by the company's energy industry customers. App. 109-10 (October 4, 1999 Press Release, *Halliburton to Sell Two Joint Ventures, Announces Earnings Outlook*).

and certainly does not claim that it reveals any prior fraud. Nettesheim's report does not link any disclosures in the release with any particular misrepresentation. Instead, her report references pages 1-2 of the Fourth Complaint,[72] which contain no alleged misrepresentations at all, much less allegations regarding any of the subjects of the press release. In fact, nowhere in the Fourth Complaint are there any allegations whatsoever regarding these subjects, including Dresser Equipment Group or any joint ventures it owned. As in *Flowserve*, there is no apparent relationship between the disclosures in the press release and any potentially actionable prior misrepresentation (which Nettesheim does not identify). *Flowserve*, 2007 WL 3357692, at *11. Additionally, as discussed above, Nettesheim's testimony that the *positive* news about the sale of Dresser's joint ventures somehow discloses previous (unidentified) fraudulent statements regarding the Dresser merger[73] demonstrates her refusal to apply the requirement that a corrective disclosure "specifically reveal[]" the prior fraud. *Greenberg*, 364 F.3d at 666.

Because Nettesheim's report characterized the press release as containing only one piece of news, she never attempted to evaluate whether a significant portion of the stock price decline was attributable to alleged culpable versus nonculpable news. Thus, even if the press release revealed the falsity of a prior misrepresentation, it would still not support loss causation. Nettesheim conducted no empirical analysis concluding that revelation of the truth, as opposed to other negative news—such as the

72. AMSF App. 42-43 (Nettesheim Rep. ¶ 87 & n.51).

73. App. 60 (Nettesheim Dep. 175-76).

decline in the *downstream* Engineering and Construction Group and the low spending by customers in the Energy Services Group—caused a significant portion of the stock price decline. *Oscar*, 487 F.3d at 270. This press release is not corrective of anything and is no evidence of loss causation.[74]

January 5, 2000. On January 5, 2000, analyst Carol Y. Lau issued a report after she had an alleged call with Halliburton. The report reduced earnings per share projections for various Halliburton segments, including Energy Services, and discussed lower oilfield services profits.[75] The Fourth Complaint does not mention Lau's report or claim that it is a corrective disclosure.[76] Nettesheim admits that she did not link any piece of news in Lau's report to any prior statement by Halliburton.[77] A reduced earnings per share estimate—in this case, one emanating from an analyst, not the Company—that does not specifically reveal prior fraud is no evidence of loss causation. *See Flowserve*, 2007 WL 3357962, at *13, *18-19.

---

74. *See also* App. to Motion to Strike (Allen Report at 23-24, 29).

75. App. 128-29 (Jan. 5, 2000 Brown Brothers Harriman & Co. Report).

76. Under *Flowserve*, Lau's report could not constitute a corrective disclosure because there is no proof that the market recognized any relationship between the disclosure and the alleged fraud. *Flowserve*, 2007 WL 3357692, at *19 (holding that "[w]hen fraud is revealed through indirect disclosure, 'plaintiffs must provide proof that the market recognized a relationship between the event disclosed and the fraud' in order to establish loss causation").

77. App. 59 (Nettesheim Dep. 142-43).

Although Nettesheim admits that the Lau report contained nonculpable news,[78] she concludes that news and analyst reports suggest that the "reductions in earnings estimates *are based at least in part* on the problems with the large fixed-price contracts and the lack of benefits from the Dresser merger."[79] This conclusion is a far cry from the *Oscar* requirement of an *"empirically-based"* analysis (as opposed to a review of news or analyst reports) concluding that a *"significant amount"* of the decline was due to the correction of prior fraud. *Oscar*, 487 F.3d at 270 (emphasis added). This is particularly true considering that the Lau report does not even mention unapproved claims or the Dresser merger.[80] The January 5, 2000 stock price drop is not evidence of loss causation.

October 24, 2000. After the market close on October 24, 2000, Halliburton issued a press release and held a

---

78. AMSF App. 43 (Nettesheim Rep. ¶ 88).

79. AMSF App. 45 (Nettesheim Rep. ¶ 92) (emphasis added).

80. App. 128-29 (Jan. 5, 2000 Brown Brothers Harriman & Co. Report). Nettesheim cites a Merrill Lynch report by analyst K. Simpson in which Simpson explains that he cut earnings estimates for a number of reasons, some of which Nettesheim admits are nonculpable. AMSF App. 42 (Nettesheim Rep. ¶ 89). Simpson references "less powerful synergies from the *Dresser* merger than *[h]e* had envisioned." AMSF App. 42 (Nettesheim Rep. ¶ 89) (emphasis added). A single analyst report referencing *his own* prior expectation about Dresser (and not Halliburton's), does not even rise to the level of "well-informed speculation," which the Fifth Circuit held is *not* probative of loss causation. *See Oscar*, 487 F.3d at 271. Under *Oscar*, Nettesheim's mere review of Simpson's report is no evidence of loss causation. *Id.*; *see also* App. to Motion to Strike (Allen Report at 24-25, 29-30).

conference call with analysts. The press release disclosed the following negative news: (1) BRES's operating income of $10 million in the 2000 third quarter was negatively impacted by continuing low capacity utilization and by delayed customer projects; (2) Engineering and Construction Group business segment's revenues in the 2000 third quarter was a declined 21 percent from the previous year; (3) the Engineering and Construction Group's revenue decline was attributable to reduced customer spending associated with KBR's downstream petroleum industry; (4) operating income for the Engineering and Construction Group was flat compared to the previous year.[81]

Analyst reports following the October 24, 2000 conference call indicate the market's awareness of the following news: (1) lower earnings in the Engineering and Construction segment;[82] (2) depressed outlook for customer spending and the lack of profit predictability in the shallow water marine construction market;[83] (3) reduced customer spending in the KBR downstream petroleum business;[84] (4) plans for restructuring of the

Engineering and Construction segment;[85] (5) lower than expected international revenues and decreased international spending by major oil companies;[86] (6) increased concerns about exposure to asbestos liability.[87]

Nettesheim admits that she "did not go back and match this partial disclosure with any particular statement."[88] Rather, she concludes with no explanation that the variety of news percolating in the market somehow related to unapproved claims and the lack of benefits from the Dresser merger.[89] And *presto*, loss causation! Under *Greenberg*, *Oscar*, and *Flowserve*, it is not that easy. First, neither the Company's statements nor the analyst reports say a single thing about unapproved claims or the Dresser merger. This is another instance in which the disclosure and the prior (unspecified) misrepresentation have no apparent relationship and loss causation is therefore absent. *See, e.g.*, *Flowserve*, 2007 WL 3357962, at *13 (holding that a disclosure accompanying a stock price drop is not corrective simply because it revealed the true financial condition of a company).

88. App. 57 (Nettesheim Dep. 137).

89. AMSF App. 47, 51 (Nettesheim Rep. ¶¶ 93, 103).

Second, there is no proof that a significant amount of the stock price drop is due to the revelation of the truth regarding any prior misrepresentation. *See Oscar*, 487 F.3d at 270. Again, Nettesheim relies on her review of analyst reports and news stories to determine the cause of the price decline.[90] Her analysis of that news, however, bears little relation to the facts. For example, she contends that because analysts reported on problems with the Engineering and Construction segment (specifically, KBR), that showed that a significant portion of the stock price decline on October 25, 2000 was related to the Company's booking of unapproved claims and the lack of benefits of the Dresser merger.[91] She fails to recognize, however, that the BRES business unit, not KBR, conducted the majority of projects on which the Company booked unapproved claims.[92] She also fails to consider that the challenges facing the KBR business unit were driven by reduced customer spending, not alleged problems with the Dresser merger.[93]

If the analyst reports show anything, they reveal that a variety of negative information existed in the marketplace. Most, if not all, of that information—low customer spending in KBR's downstream petroleum business[94] and decreased international spending by major

91. AMSF App. 47-52 (Nettesheim Rep. ¶¶ 95-105

92. *Morris*, 2007 WL 614210, at *1.

93. App. 135-37 (October 25, 2000 Dain Rauscher Wessels Report).

94. App. 135-37 (October 25, 2000 Dain Rauscher Wessels Report).

oil companies,[95] for example—bears no relation to the allegations regarding unapproved claims or the Dresser merger. Nettesheim does not provide any empirical evidence that the stock price decline was due to revelation of any alleged misrepresentation as opposed to this nonculpable information. *See Oscar*, 487 F.3d at 270. In fact, Nettesheim does not even prove that there was *any* corrective disclosure on October 24, 2000, much less that such disclosure caused the stock price decline.[96]

December 22, 2000. On December 21, 2000, the company issued a press release formally announcing the restructuring of its engineering and construction units into one business segment and stating that the company would take an after-tax charge. The charge related to (1) restructuring costs (such as severance costs associated with reduction of senior management positions); (2) current losses during the quarter on KBR's construction joint ventures, much of which was caused by labor disturbances in Venezuela and West Africa; (3) and some unapproved claims, which the company was unable to favorably resolve with customers.[97]

---

95. App. 135-37 (October 25, 2000 Dain Rauscher Wessels Report).

96. *See* App. to Motion to Strike (Allen Report at 25-27, 30).

97. App. 114-16 (December 21, 2000 Press Release, *Halliburton Announces New Structure and Engineering and Construction Charges*). Recording of current losses is not and cannot be a correction of any prior misstatement. Additionally, the Company's decision to take a charge for prior unapproved claims does not mean that the prior recording of such unapproved claims was improper.

Nettesheim cannot connect this release, which makes no mention of the Dresser merger, to any nonconfirmatory prior statement about Dresser.[98] Her claim that this disclosure relates generally to allegations regarding unapproved claims and cost overruns[99] is contrary to *Greenberg's* requirement of a specific corrective connection. *See Greenberg*, 364 F.3d at 668 (holding that a disclosure concerning third quarter expectations had no relationship with a prior alleged misrepresentation concerning first and second quarter results). Additionally, as the *Flowserve* court held, a disclosure of a change in circumstances—here, an unfavorable resolution of unapproved claims with its customers—does not constitute a correction of a prior statement.[100] *See Flowserve*, 2007 WL 3357692, at *18 & n.31.

Nettesheim does not explain how losses during the quarter on KBR joint venture projects never mentioned in the Fourth Complaint could possibly relate to any alleged prior misrepresentation. Analyst commentary indicates that these losses related to labor disturbances, a shrinking customer base resulting from consolidations, and financially troubled competitors who were driving

---

98. As discussed above, there is no allegation of a nonconfirmatory statement during the class period about Dresser. *See supra* p. 5.

99. App. 56 (Nettesheim Dep. 130)

100. AMSF has not presented evidence of when the company originally recorded the unapproved claims discussed in this release and whether that recording was even during the class period and therefore actionable.

down prices.[101] The release plainly contains nonculpable negative news.[102] But when Nettesheim responded to a question about whether she conducted any statistical analysis of the various factors affecting the stock price decline, she explained that she reviewed news reports (which themselves contain multiple pieces of negative news).[103] She conducted no empirical analysis separating the various potential reasons for the stock-price decline as required by *Oscar*. The December 22, 2000 decline in stock price is therefore no evidence of loss causation.

June 28, 2001. On June 28, 2001, Halliburton issued an after-market press release stating that Harbison-Walker Refractories Company, a former subsidiary of Dresser had requested Halliburton's financial assistance for asbestos claims Harbison-Walker assumed financial responsibility for when it was spun off from Dresser in 1992.[104] Halliburton could not have disclosed this information until June 2001 because Halliburton had only then received Harbison-Walker's request for assistance.[105]

Nettesheim contended there was a sufficient link between this disclosure and a prior—but unidentified—misstatement merely because the disclosure "talk[ed]

---

105. App. 102 (June 2001 10-Q at 11).

about asbestos claims."[106] She could not, however, provide any evidence that the disclosure revealed the falsity of any specific prior misrepresentation, as required by *Greenberg*. In fact, she refused to testify that the disclosure contained information that Halliburton should have disclosed earlier.[107] There is no such evidence. The release itself states that Harbison-Walker's request was an "unexpected development" and that Harbison-Walker had recently reaffirmed its responsibility for the relevant asbestos claims.[108] There is no proof that this disclosure is corrective, and it is therefore no evidence of loss causation. *See Flowserve*, 2007 WL 3357962, at *18 (holding that an unexpected disclosure's negative effect on the price of the stock does not demonstrate any corrective effect).[109]

August 9, 2001, October 31, 2001, and December 4-7, 2001. On August 9, 2001, Halliburton filed its Form 10-Q, which Nettesheim admits contained a "lot of information"[110] including that the Company increased its reserves for known asbestos claims. The Fourth Complaint does not allege that this 10-Q contained any corrective disclosure. On October 30, 2001, the Company issued a press release concerning a jury verdict in a Mississippi asbestos suit against Harbison-Walker.[111] The

107. App. 54 (Nettesheim Dep. 123).

108. App. 117-18 (June 28, 2001 Press Release, *Harbison-Walker Asks Halliburton for Assistance*).

109. *See also* App. to Motion to Strike (Allen Report at 33-39).

110. App. 53 (Nettesheim Dep. 121).

111. App. 119-20 (Oct. 30, 2001 Press Release, *Halliburton Disputes Asbestos Claims*).

Fourth Complaint does not mention this press release or claim that it resulted in losses to the class. On December 4, 2007, the Company announced that a Texas court entered judgment in asbestos litigation against Dresser.[112] On December 7, 2001, the Company issued a press release concerning a Maryland jury verdict in an asbestos suits against Dresser.[113]

Nettesheim merely contends that these disclosures generally relate to prior, unidentified statements about asbestos.[114] Despite the requirement in *Greenberg* that there be evidence that such disclosures "specifically reveal[]" a prior misrepresentation, Nettesheim provided no testimony of any such prior misrepresentation and could not explain when or why Halliburton should have disclosed this information earlier.[115] Halliburton's increase of its asbestos reserves in the August 2001 10-Q results from the previously announced inability of Harbison-Walker to satisfy its indemnitee obligations, reflects a change Halliburton's estimation of its liability on pending claims, and is no evidence of a corrective disclosure.[116] Further, disclosures of adverse jury verdicts—particularly when, as here, the disclosure occurred within days of the verdict—corrects nothing. *Flowserve*, 2007 WL 3357692,

---

112. App. 107 (Dec. 4, 2001 Form 8-K at 2).

113. App. 121-23 (Dec. 7, 2001 Press Release, *Halliburton Comments on Asbestos Judgments*).

114. App. 52, 53 (Nettesheim Dep. 110-11, 120, 121).

115. App. 53 (Nettesheim Dep. 120).

116. App. 103 (June 2001 10-Q at 12); App. to Motion to Strike (Allen Report at 37).

at *19 (holding that a negative disclosure is not necessarily a corrective disclosure).[117] In fact, the disclosures merely confirmed the Company's previous and repeated warning that a series of such results "could materially impact" its expectations regarding resolutions of its asbestos claims.[118]

For all these reasons, and the reasons in the Expert Report of Dr. Lucy Allen, these eight disclosures cannot be construed as corrective and provide no evidence of loss causation. Because AMSF has provided no evidence of loss causation, class certification must be denied.

II. A class should not be certified as to Lesar because AMSF has not and cannot prove loss causation as to any misrepresentation attributed to him.

AMSF did not even attempt to prove the most basic element of its securities claim against Lesar—that a statement he made inflated the stock price. Nettesheim identifies only two dates late in the more than 600-day class period on which the stock price increased. On neither of those dates did Lesar make a factual statement that AMSF has alleged to be false. Nor does AMSF or its expert claim that either of these statements support loss causation. Nettesheim's failure to demonstrate inflation of the stock price due to a statement by Lesar during the class period is fatal. *See Zonagen*, 322 F. Supp. 2d at 776.

Likewise, Nettesheim fails to identify any disclosure

117. *See also* App. to Motion to Strike (Allen Report at 34-38).

118. *See* App. 78 (1999 Form 10-K at 44).

accompanying a stock price drop that corrects any prior actionable statement by Lesar. As discussed above, his statement concerning benefits from the Dresser merger is confirmatory and thus not actionable, and none of the eight disclosures Nettesheim identifies could possibly be construed as correcting the statement. *See supra* pp. 5, 23-31. As Nettesheim freely admits, she did not link any of the eight disclosures to any prior particular statement, including any statement by Lesar. Her analysis does not pass muster in the Fifth Circuit, and class certification must be denied as to Lesar. *See Greenberg,* 364 F.3d at 667; *Flowserve*, 2007 WL 3357692, at *11-12. AMSF has failed to prove loss causation (which Defendants contend it never pleaded) as to Lesar. The Court should not only refuse to certify a class as to him but should also grant the pending motion for reconsideration and dismiss any claims in the Fourth Complaint against Lesar.

III. Proposed class representatives Murphey and AMSF are neither typical nor adequate.

Neither Murphey nor AMSF have made the requisite showings to satisfy the typicality and adequacy requirements imposed under Rule 23(a). Murphey has not been appointed by the Court as a lead plaintiff, and AMSF's Motion offers no reason whatsoever for appointing him as class representative. His vulnerability to a number of unique defenses, his unfamiliarity with and lack of control over the litigation, and his small stake in the outcome of the litigation make him an improper representative. Similarly, unique defenses that may be asserted against AMSF render it an atypical and inadequate class representative.

Appendix C

A. Rule 23(a)'s requirements for typicality and adequacy.

A plaintiff's claims lack typicality if his legal or factual position is "markedly different from that of other [class] members, even though common issues of law or fact are raised." *Kas v. Fin. Gen. Bankshares, Inc.*, 105 F.R.D. 453, 461 (D.D.C. 1984). Thus, "the typicality requirement is not met when the circumstances of the representatives or the legal theory upon which their claims are premised are notably different from circumstances or claims of the class members." *Weikel v. Tower Semiconductor, Ltd.*, 183 F.R.D. 377, 390 (D.N.J. 1998). Similarly, when the representatives' claims and the defendants' defenses thereto "will be dominated by individual evidence," the typicality requirement of Rule 23(a)(3) is not satisfied. *Martin v. Home Depot U.S.A., Inc.*, 225 F.R.D. 198, 201 (W.D. Tex. 2004); *In re FirstPlus Fin. Group, Inc., Sec. Litig.*, No. Civ. A. 3:98-CV-2551-M, 2002 WL 31415951, at *5 (N.D. Tex. Oct. 28, 2002).

The typicality requirement of Rule 23(a)(4) is heightened in securities cases because "the PSLRA raises the standard adequacy threshold," requiring that "competent plaintiffs, rather than lawyers, direct such cases." *Berger*, 257 F.3d. at 483-84. "[B]ecause absent class members are conclusively bound by the judgment in any class action brought on their behalf, the court must be especially vigilant to ensure that the due process rights of all class members are safeguarded through adequate representation at all times." *Id.* at 480; *Ogden v. AmeriCredit Corp.*, 225 F.R.D. 529, 532 (N.D. Tex. 2005). Accordingly, the Fifth Circuit has interpreted Rule 23(a)(4) to mandate an inquiry not only into the "zeal and

competence of the representative[s'] counsel," but also into "the willingness and ability of the *representative[s]* to take an *active role in and control* the litigation and to protect the interests of the absentees." *Berger*, 257 F.3d at 479 (quoting *Horton v. Goose Creek Indep. Sch. Dist.*, 690 F.2d 470, 484 (5th Cir. 1982) (emphasis added). A class representative is inadequate when the evidence demonstrates that his or her understanding of the case is "limited to derivative knowledge acquired solely from counsel." *Berger*, 257 F.3d at 483 n.18; *Ogden*, 225 F.R.D. at 535; *Krim v. pcOrder.com, Inc.*, 210 F.R.D. 581, 587 (W.D. Tex. 2002).

B. Murphey is neither typical nor adequate as required by Rule 23(a).

1. Murphey cannot satisfy the typicality requirement.

Murphey—basically a day-trader, who profited from buying Halliburton stock and whose class period trades occurred before any alleged artificial inflation in the stock price—fails to satisfy the typicality requirement because he is subject to unique defenses concerning his reliance. *See Warren v. Reserve Fund, Inc.*, 728 F.2d 741, 747 (5th Cir. 1984) (affirming denial of class certification because, among other reasons, of "concern that representation of the class will suffer if the named plaintiff is preoccupied with a defense . . . applicable only to himself").

First, as a day-trader, he looked at short-term price patterns of Halliburton stock, rather than the market price, to determine whether to buy or sell the stock.[119] He

119. App. 37-40 (Murphey Dep. 149-51; 156-58).

frequently bought and sold Halliburton stock on the same day.[120] Evidence that a person "focuses on technical price movements rather than price" is a "compelling reason to rebut the [fraud on the market] reliance presumption." *See In re Safeguard Scientifics*, 216 F.R.D. 577, 582 (E.D. Pa. 2003).[121]

Second, Murphey profited from every trade he made during the class period, and is therefore not a typical representative.[122] *See In re Organogenesis Sec. Litig.*, 241 F.R.D. 397, 401 (D. Mass 2007) (concluding that the plaintiff would not be a typical representative if he actually benefited from an artificially inflated price). The only shares that he held at the end of the class period—the 300 shares he bought on September 13, 2000 for $15,843.75—he still holds today. Those shares have grown through stock splits and dividend reinvestments to over 600 shares and are worth considerably more than Murphey paid.[123]

---

120. App. 37-40 (Murphey Dep. 149-51; 156-58).

121. Murphey also admits that he relied on non-market information in making the decision to purchase Halliburton stock. Unlike other class members, he bought Halliburton stock because he *personally* observed Halliburton's work overseas, and even he believes that there is not "another person in the class" who invested for these reasons. App. 35-36 (Murphey Dep. 133–34).

122. *See* App. 42 (Murphey Dep. 164-65) (admitting that he profited on every sale of Halliburton stock during the class period and therefore had a 100 percent success rate); *see also* App. 255 (Ben Alan Murphey Class Period Trades).

123. *See* App. 42-44 (Murphey Dep. 165-70); *see also* App. 158-254, (Yahoo! Finance Stock Price Chart).

Third, the timing of Murphey's transactions demonstrates Murphey's atypical position with respect to reliance and injury.[124] All of Murphey's class period trades occurred between March 14, 2000 and September 13, 2000,[125] and before the only two instances of a statistically significant price increase that AMSF's expert has tied to any Halliburton-specific statement.[126] Thus, Murphey is subject to the defense that he cannot benefit from the fraud-on-the-market presumption because he did not trade any shares "between the time [any actionable] misrepresentations were made and the time the truth was evealed."[127] *See Greenberg*, 364 F.3d at 661.

---

124. Plaintiffs purport to rely on the fraud-on-the-market theory to establish a "class-wide presumption of reliance." Motion at 16. "Ordinarily, under a fraud-on-the-market theory, there is a presumption that an investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price." *Safeguard*, 216 F.R.D. at 582 (internal quotations omitted). However, a defendant may rebut the presumption by "showing that . . . the plaintiff would have made the purchase regardless of the misstatement/omission." *Id.*

125. App. 38, 42-44 (Murphey Dep. 152-54, 165-66, 171).

126. *See* AMSF App. 20-23 (Nettesheim Rep. ¶ 45) (identifying first such increase on April 26, 2001).

127. Moreover, all of Murphey's trades occurred on or after the day that Halliburton issued its 1999 Form 10-K, which disclosed Halliburton's accounting for unapproved claims and therefore cannot be based on the alleged misrepresentations related to those claims. *See* App. 38 (Murphey Dep. 152:3-153:16); App. 76 (1999 Form 10-K at 34).

2. Murphey cannot satisfy the adequacy requirement.

Murphey sued Halliburton many months after this class action was first filed,[128] and he did so only after being contacted by Neil Rothstein, AMSF's "special counsel" with whom he had had no prior contact.[129] Murphey's testimony shows that he lacks the necessary understanding of the allegations and the procedural history of this case to serve as a class representative.[130]

He is not in control of the litigation.[131] He does not remember having any input into the filing of the original complaint filed in his name;[132] he admits it was not his decision to file the Fourth Complaint;[133] and he does not know if he reviewed the class certification motion before it was filed with the Court.[134] In fact, Murphey does not even actively contact his lawyers.[135] He is unfamiliar with the parties to the suit, the remaining claims at issue, or

---

128. App. 26-27 (Murphey Dep. 53-55).

129. App. 25, 29-30 (Murphey Dep. 34-35, 64-66).

130. App. 30, 32, 34, 45 (Murphey Dep. 62; 106-08; 109; 122-23; 201).

131. App. 46 (Murphey Dep. 211).

132. App. 28 (Murphey Dep. 59–60).

133. App. 33 (Murphey Dep. 119).

134. App. 33 (Murphey Dep. 120-21).

135. App. 32 (Murphey Dep. 109).

whether any claims have been dismissed.[136] Accordingly, Murphey is not an "active, able class representative[] who [is] informed and can demonstrate that [he is] directing the litigation." *Berger*, 257 F.3d at 483; *see also Kase*, 218 F.R.D. at 159 (finding named plaintiff an inadequate representative because he had "not participated in many of the key strategic decisions" in the case and he had "stated that he would permit class counsel to pursue [the] lawsuit as they saw fit"); *Krim*, 210 F.R.D. at 588 ("An example of an adequate class representative is one with 'commendable familiarity with the complaint . . . .'") (quoting *Horton*, 690 F.2d at 484).

A putative class representative is also inadequate if he has "an insufficient stake in the outcome." *Jenkins v. Raymark Indus., Inc.*, 782 F.2d 468, 472 (5th Cir. 1986).[137] As discussed above, Murphey did not lose money; he actually profited by purchasing Halliburton stock. Because Murphey, by his own admission, does not have enough at stake in the outcome "to ensure zealous advocacy," he will not adequately protect the interests of the unnamed class members. *See Vodak v. City of Chicago*, No. 03 C 2463, 2006 WL 1037151, at *6 (N.D. Ill. Apr. 17, 2006).

---

136. App. 45, 34, 32 (Murphey Dep. 201, 122-23, 106-08).

137. The rebuttable presumption in the PSLRA that the most adequate plaintiff is the person with "the largest financial interest in the relief sought by the class" further illustrates the importance of a class representative's financial interest in the outcome of the litigation. 15 U.S.C. § 78u-4(a)(3)(B)(iii)(bb) (2000).

C. AMSF cannot satisfy the typicality and adequacy requirements.

1. AMSF's complete reliance on money managers renders it atypical and/or inadequate.

Because AMSF decided to grant unfettered authority over its investment decisions to third parties, it cannot satisfy the typicality requirement. Courts have recognized that plaintiffs who rely solely upon third parties to make investments are subject to a unique defense—namely that they have not relied upon the misrepresentations and omissions allegedly made by the defendant to the market. *See In re Caremark Int'l, Inc. Sec. Litig.*, No. 94 C 4751, 1996 WL 351182, at *6 (N.D. Ill. June 24, 1996); *see also Fry v. UAL Corp.*, 136 F.R.D. 626, 635-36 (N.D. Ill. 1991).[138] As such, they may be atypical or inadequate

---

138. No court within the Fifth Circuit has addressed whether a proposed class representative who delegates authority over its investments to a third party satisfies the typicality and/or adequacy requirements of Rule 23(a). But the *Caremark* and *Fry* decisions holding that plaintiffs who abdicate their investment decisions to others are not adequate or typical are consistent with the Fifth Circuit's careful approach to the Rule 23 requirements. In contrast, some courts have found such plaintiffs adequate and typical in circumstances not present in this case. *See In re Vicuron Pharm., Inc. Sec. Litig.*, 233 F.R.D. 421, 426-27 (E.D. Pa. 2006) (approving class representative that delegated investment decisions to a manager but created investment guidelines and monitored investment activities); *Dorchester Invs. v. Peak Trends Trust*, 2002 WL 272404, at *8-9 (S.D.N.Y. Feb 26, 2002) (approving class representatives despite discretationary accounts because it did not appear that they had never followed the affairs of the company or had learned about the investment only after the fact).

and cannot serve as class representatives.

In *Fry*, the court refused to allow plaintiff Marra to be a class representative because (1) Marra stated that a third party had "complete discretionary authority over his account"' (2) Marra did not follow the affairs of UAL; and (3) Marra "was not even aware that his funds had been invested" in UAL. *Fry*, 136 F.R.D. at 636. The court reasoned that "someone who abdicated complete authority over his relevant financial affairs" could not be found an adequate representative. *Id.* Similarly, in *Caremark*, the court held that "a certain minimal level of participation by the plaintiff in the relevant stock transaction must be demonstrated" in order for that plaintiff to satisfy the typicality or adequacy requirements of Rule 23(a). *Caremark*, 1996 WL 351182, at *6 (quoting *Fry*, 136 F.R.D. at 635). In refusing to certify one of the plaintiffs as a class representative, the *Caremark* court stated that "[p]lainttiffs have not been permitted to act as class representative in securities litigation where they did not participate in the investment decision *at issue*." *Id.* (emphasis added). Because the plaintiff in *Caremark* "had no input into the decision to purchase the Caremark Stock and learned of it only after it had occurred," he was precluded from being a class representative. *Id.*

AMSF, like the plaintiffs in *Fry* and *Caremark*, made no decisions whatsoever regarding the purchase of the stock at issue in this case.[139] Instead, AMSF relied exclusively on its money managers during the class period

139. App. 14 (AMSF Dep. 113). AMSF continues to this date to completely delegate authority over its investments to third parties. App. 3, 14 (AMSF Dep. 23, 113).

to make any and all decisions related to the purchase or sale of *any* stock. AMSF granted these money managers "full discretionary authority."[140] AMSF therefore never made the most basic decisions about whether or when to purchase or sell its Halliburton stock.[141] In fact, AMSF could not recall how or when it first learned that it owned Halliburton stock,[142] and was not even aware that it owned Halliburton stock until AMSF was informed by its money managers that it had been purchased on AMSF's behalf.[143] Moreover, AMSF did not know why its money managers purchased Halliburton stock,[144] or what its money managers intended to do with it once it was purchased.[145]

AMSF relied exclusively on its money managers not only to make stock purchase and sale decisions, but also to monitor all of its investments. AMSF admitted that because its "investment strategy is handled completely by consultants," it did not know other basic information about its investments, including whether AMSF employs money managers who buy and sell stock on the same day,[146] or what "general strategy" the money managers follow.[147]

Appendix C

The facts surrounding AMSF's delegation of unfettered discretion to its money managers in connection with its investments are identical to those in both *Fry* and *Caremark*. As a result, AMSF does not meet the typicality requirement of Rule 23(a) and it cannot serve as a class representative. *In re Caremark*, 1996 WL 351182, at * 6.

2. AMSF Is Not an Adequate Representative of the Putative Class.

Throughout this litigation Paula John, AMSF's President and CEO and former law school classmate of AMSF's special counsel, Neil Rothstein,[148] has been the client representative of AMSF. Naturally, Halliburton's counsel expected (as AMSF's counsel had represented) that John would appear for the Rule 30(b)(6) deposition of AMSF. Instead, upon arriving at the deposition, Halliburton learned that AMSF would offer Patrick Byrne, who could not answer a number of questions that were integral to issues related to class certification and AMSF's adequacy as a class representative.[149]

John's absence from the AMSF deposition is indicative of who is actively directing the litigation: AMSF's lawyers, not AMSF. *Berger*, 257 F.3d at 483-84. AMSF

148. *See* App. 156 (Roger Parloff, *Lerach Firm Will Fight Client to Stay in Halliburton Case, Fortune*, Dec. 13, 2006, at 2, available at http://legalpad.blogs.fortune.cnn.com/2006/12/13/lerach-firm-will-fight-client-to-stay-in-halliburton-case (last visited Nov. 15, 2007).

149. App. 7-8, 9 (AMSF Dep. 53, 54, 59).

also admitted that it had very limited knowledge about the confidential sources upon which part of its complaint relies and could not even confirm whether AMSF had previously been in contact with those sources.[150] Quite simply, it appears as though the idea for the lawsuit, as well as the development of the factual allegations on which it is based, came from counsel, not AMSF. A proposed class representative, even if aware of the facts regarding the lawsuit, is an inadequate representative if he has left it to the attorneys to direct and develop the case. *See Kase v. Salomon Smith Barney, Inc.*, 218 F.R.D. 149 (S.D. Tex. 2003).

CONCLUSION

The Court should deny AMSF's motion for class certification. There is no evidence of loss causation. In fact, AMSF's expert demonstrates that Halliburton's stock price was not inflated due to any alleged misrepresentation. Additionally, the proposed class representatives are neither adequate nor typical of the proposed class.

EXCERPTS OF DEPOSITION OF JANE NETTESHEIM IN THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF TEXAS DALLAS DIVISION, DATED OCTOBER 16, 2007

[1] IN THE UNITED STATES DISTRICT COURT
FOR THE NORTHERN DISTRICT OF TEXAS
DALLAS DIVISION

ARCHDIOCESE OF MILWAUKEE SUPPORTING FUND, INC., et al., On Behalf of Itself and All Others Similarly Situated,

Lead Plaintiff,

vs.

HALLIBURTON COMPANY and DAVID J. LESAR,

Defendants.

Civ Action No. 3:02-CV-1152-M

DEPOSITION OF JANE NETTESHEIM
New York, New York
Tuesday, October 16, 2007

Reported by:
Adrienne M. Mignano
JOB NO. 198024

Appendix C

[2] October 16, 2007

9:35 a.m.

Deposition of JANE NETTESHEIM, held at the offices of Boies, Schiller & Flexner, 575 Lexington Avenue, New York, New York, pursuant to Notice, before Adrienne M. Mignano, a Notary Public of the State of New York.

[4] IT IS HEREBY STIPULATED AND AGREED, by and between counsel for the respective parties hereto, that the filing. sealing and certification of the within deposition shall be and the same are hereby waived;

IT IS FURTHER STIPULATED AND AGREED that all objections, except as to the form of the question, shall be reserved to the time of the trial;

IT IS FURTHER STIPULATED AND AGREED that the within deposition may be signed before any Notary Public with the same force and effect as if signed and sworn to before the Court.

[5] Nettesheim

JANE NETTESHEIM, called as a witness, having been duly sworn by a Notary Public, was examined and testified as follows:

EXAMINATION BY MR. STERLING:

Q. Tell us your name, please.

A. Jane Denise Nettesheim.

Q. The "H" is silent as you pronounce it?

A. Yes.

Q. I'm sorry. By whom are you employed?

A. Stanford Consulting Group.

Q. What is Stanford Consulting Group?

A. It's a consulting firm. We do economics, financial economics, and most of our work is in the area of litigation support.

Q. What percentage of Stanford Consulting Group revenues are related to litigation support?

A. Well over 90 percent.

Q. What is your position with

* * *

[74] find any statements made by Halliburton during the class period which increased in a statistical manner the stock price other than the April 26, 2001 increase in estimates and the July 26, 2001 release of earnings?

MS. BOIES: Can you read that back.

(Record read)

A. That's correct.

Q. And am I also correct that you did not do any analysis of statements made by Halliburton or anybody

acting on behalf of Halliburton before the class period which increased in a statistically significant manner the stock price of Halliburton?

A. I did not look at any statements before the class period.

Q. So as we sit here today, based upon all the work that you have done on this case, the only statements ever made by Halliburton which according to your analysis had an impact positively on the stock price were the April 26, 2001 [75] increase in estimates and the July 26, 2001 earnings announcement?

A. No, that's not correct.

Q. What's incorrect about that?

A. Could you read back the question?

(Record read)

A. I stand by my answer.

Q. And your answer was?

A. That — your question was something about any positive impact, and we have had an extensive discussion about statistically significant positive returns, but not any positive impact.

Q. You lost me, I'm sorry.

A. I did not look at every Halliburton statement during the class period and then look to see whether or not the stock price went up.

Q. Sure. What you did was you looked at the dates in which there was a statistically significant return with a positive or negative, correct?

A. Correct.

[76]Q. And my question, I'll rephrase it, is: Did you find — other than the April 26, 2001 increase in Halliburton's earnings estimates and the July 26, 2001 earnings announcement, did you ever find any statements made by Halliburton which had a statistically significant positive impact on Halliburton stock price?

A. Those were the two days there were significantly — significant positive increases in the stock price, and there were specifically that I have found at this point company announcements.

Now, Exhibit 18 to my report, there are lots of days where the stock price goes up. And there may be Halliburton news.

Q. But not on a statistically significant manner because you only found seven days where there was a statistically significant manner?

A. Correct, but your earlier question referred to a positive effect.

Q. I don't think so. Let me re-ask [77] it just so we're clear.

Other than the April 26, 2001 increase in Halliburton's earnings estimates and the July 26, 2001 announcement by Halliburton of its earnings, it is correct, is it not, that you did not find any statements by Halliburton which had a statistically significant positive impact on Halliburton stock price?

A. Correct, those are the only two days.

MR. STERLING: Let's take a break.

(Thereupon, a recess was taken, and then the proceedings continued as follows:)

BY MR. STERLING:

Q. Miss Nettesheim, we've finished going through the seven dates as to which you found a statistically significant positive return. Now I would like to focus on the 24 days when you found a statistically significant negative return,

* * *

[82]Q. Would you agree with me that the press release or news release contains multiple pieces of information about the company?

A. Well, it is generally about the Dresser businesses, but there is other information in the press release, yes.

Q. Including the lowering of earnings guidance for the third quarter of 1999?

A. Yes.

Q. And did you do any statistical or mathematical or econometrical analysis to delineate the stock price movement between the multiple pieces of information in that news release?

A. I determined that there was a statistically significant decline on that day, and determined what the — by looking at the news and all of the information on that day, what the decline was attributed to.

Q. Right.

And in my mind, I draw the distinction between looking at the news [83] and the analysts and doing something statistical or econometric or mathematical.

You have got a statistical background. You can do analysis that lots of people can't. Anybody can look and see what the analysts say. And I'm trying to see, did you do anything of a statistical or mathematical nature to delineate the stock movement between the different pieces of information that hit the market that day?

A. I'm not sure which pieces of information you're referring to. If you have something specific in mind.

Q. Just to pick out two pieces of information from that press release, there is the sale of the Dresser joint ventures and there is the lower earnings guidance for the next quarter.

A. Those are somewhat related.

Q. How do you know that?

A. I have paragraph 84 of my report indented, quote refers to the "Dresser [84] Equipment Group business segment and its engineering and construction business segment are warning of lower profits. As a result, Halliburton expects a third quarter profit between 11 and 13 cents a share."

Q. Which is different from the sale of the joint venture, correct?

A. I'm not sure that that is correct.

Q. You don't know one way or the other?

A. Well, it's related because in paragraph 85, it says, "Dresser Industries will sell its stake in two joint ventures to Ingersoll Rand for 1.1 billion after poor performance by the businesses hurt third quarter results."

Q. Right.

A. So I believe that's related.

Q. Well, when you have a sale of joint ventures for a disclosed price, the market may think it is a good price or a bad price, for example?

A. It could, yes.

[85]Q. And when the company also says, as it says here, we're warning of lower profits of our other divisions as well, that could be viewed positively or negatively by the market, correct?

MS. BOIES: Objection. Calls for speculation.

A. Depending on the circumstances.

Q. You would agree that just as your paragraph on page 84 reflects, there were multiple pieces of news regarding Halliburton reflected in this news release?

A. There are different sentences referring to different aspects of the information. I see them as related.

Q. And I think we'll save a lot of 19 time if —

MR. STERLING: Strike that.

Q. Would you agree with me that you did not do any statistical or econometric analysis to delineate the movement in the stock that day between different pieces of information about the company that hit the [86] market that day?

A. As I said earlier, I'm not sure which different pieces you're referring to.

Q. Just the different pieces reflected in paragraph 84 in the blocked quote.

A. As I said, there are different — there are a number of sentences in that quote, but I see that information as related.

Q. How do you see the information about the sale of the two joint ventures to Ingersoll Rand for 1.1 billion as being related to the warnings of lower profits in the engineering and construction business segment?

MS. BOIES: Objection. Asked and answered.

A. Well, the earnings warning is due to the lower profits and part of it is the Dresser Equipment, and then there is a description of what is contributing to the earnings warning, the Dresser Equipment [87] Group and the engineering and construction business.

Q. And then you have the sale of the joint venture for 1.1 billion?

A. Yes.

Q. That's a different piece of information, correct?

A. I see it as related to the Dresser Equipment Group and the earnings warning.

Q. How?

A. Well, as I pointed out in paragraph 85, quoted a news article saying there was poor performance in those businesses that hurt the third quarter.

Q. But am I correct that you did no statistical or econometrical analysis to try to delineate the stock movement on October 5th between any different pieces of information that hit the market on that day?

MS. BOIES: I think that she has answered this now three times. The point of differentiation is the word different. You keep saying analysis [88] between the different pieces of information and she is saying I don't see it as being different. And I think that's where we're sort of butting heads.

Q. Do you agree with Caryl's statement?

MS. BOIES: And I could be wrong.

Q. I'm not trying to put you on the spot or anything.

A. Well, I stand by my answer. I'm not sure what different pieces you're referring to.

Q. In any event, whether you think of all of that in the press release, the press release that you saw, as one piece of information or multiple pieces of information, it's true, isn't it, that you didn't do any statistical or mathematical

or econometrical analysis to try to delineate the stock movement between the different pieces of information?

A. Well, as I said, I see the information as related, It's the earnings [89] warning, and I measured the company specific return on that day.

Q. As you did with every day?

A. I did do that on every day, yes.

Q. Can you tell us or can you point to us a single day on which you found a statistically significant negative return to the stock in which you then went to the next step and did some statistical or mathematical or econometric analysis to try to delineate the stock movement between different pieces of information on the stock that hit the market that day?

A. I did not quantify it specifically, but there are days where I looked at different pieces of information to determine whether or not the different pieces of information could have been important material on those days.

Q. To be fair, and I really am trying to be fair, I think every time you found a statistically significant movement in the stock price. you looked what analysts and news reports said about it to see what [90] they attributed the movement to, correct?

A. In addition to that, I also looked at models of company valuations.

Q. Done by these analysts?

A. Correct.

Q. And my question is real simple. We all know what the answer is. At no time in your analysis did you ever go to the next step yourself and do any statistical, mathematical or econometric analysis to try to delineate stock movement between different pieces of information that hit the market that day about the stock, correct?

A. I don't think that's entirely correct, no.

Q. Because when you looked at how analysts changed their modeling, you looked to see how they attributed it?

A. The analysts' models incorporated the company's discussion or news release and the change in the company's guidance with respect to different aspects of the businesses.

[91]Q. But those models are going forward estimates, correct?

A. Well, they are based on both current reporting, current guidance and then projections.

Q. Those are not models showing here is what the stock price did historically on such and such a date and here is why I think it did that?

A. Well, they do look at the — the stock price is just a per share value of the company. So the models are

looking at valuations of the equity of the company. And when you change certain aspects of the model, you can see where what aspects — how changes with respect to value, different pieces of the company will affect the value of the company as a whole.

Q. Could you have done some type of statistical, mathematical, econometrical analysis to delineate on those days in which you found a significantly statistically price movement upon the [92] different pieces of information that hit the market about the Halliburton stock that day?

A. Yes. I think what you're asking me is something that I was not asked to do.

Q. Have you ever done such an analysis?

A. Yes.

Q. When? In the HomeStore.com case?

A. I don't recall.

Q. In the GenesisIntermedia case?

A. I don't think I did in the GenesisIntermedia case. I'm not sure if I did in the HomeStore case. I have done it in cases, I don't recall specifically, and I have been asked to do other kinds of things.

Q. Walk us through how you go about doing that type of analysis.

A. There could be several — it would depend on the type of information I was looking at, how it was released, the environment in which it was released.

[93]Q. Just generally the methodology?

A. There isn't one general methodology.

Q. How have you done it in the past?

A. I have used discounted cash flow analysis, I have used — I have looked at comparable company analysis.

Q. Have you ever done event studies on the same company to look at other disclosures of similar or related pieces of news that had a statistically significant impact on the stock price?

A. Can you read that back?

(Record read)

A. I'm sorry, could you rephrase the question?

Q. That didn't come out quite right.

Let's say you have three pieces of information. We'd call it A, B and C. And your analysis shows — and it's all released in the same news report oranalyst call or what not, okay?

A. Okay.

Q. And your analysis shows that that

* * *

[110] Halliburton had said, oh, we have this case in Maryland, don't worry about it, we're going to win or anything like that, are you?

A. I don't recall that.

Q. From a loss causation perspective, what, if any, fraudulent statements ever made by the company do you link to the discussion in paragraph 75?

MS. BOIES: Objection. Calls for a legal conclusion.

A. The discussion in paragraph 75 is related to the allegations in the complaint regarding under reserving for the asbestos exposure.

Q. And is there any particular statement that the company ever made that in your mind is shown to be somehow false or fraudulent or misleading based upon "what's discussed in paragraph 75?

MS. BOIES: Objection. Calls for a legal conclusion.

A. As I said in my report, I assumed the allegations in the complaint to be [111] true, and the discussion in paragraph 75 is related to the allegation about the under reserving for the asbestos liability.

Q. What is a reserve?

A. I am not an accountant. I will give you my understanding.

Q. I understand.

A. It is a liability or indication of the size of a potential liability.

Q. It's an estimate, correct?

A. Yes. It may not always be, but I think frequently it is an estimate.

Q. As an estimate, it could be high or low or, oddly enough, be right on the mark, correct?

A. In general, yes.

Q. Is there any particular statement made by the company that you claim that this was, in your phrase, partial disclosure of?

Let me back up.

You refer at several points in your report to partial corrective [112] disclosures; is that correct?

A. I may have used that term.

Q. In fact, if you look at — partial disclosures. If you look at, for example, page 37, APP.039.

A. Are you referring to in paragraph 83?

Q. Yes.

A. Yes, I use that term.

Q. And what in your mind is a partial disclosure as you use the phrase there?

A. Information released to the market that can at least partially correct for alleged misrepresentations and/or omissions.

Q. The announcement on July 7, 2001 discussed in paragraph 75 —

A. Excuse me, that's December 7, 2001.

Q. I'm sorry.

The announcement on December 7, 2001 as discussed in paragraph 75 is a partial disclosure in your mind of what prior statements made by the company?

[113] MS. BOIES: Just so we're clear, it's paragraph 75 of the appendix, not of the actual —

MR. STERLING: Correct.

A. That relates to, as I said earlier, the allegations about the under reserving of the asbestos liability.

Q. And I'll represent to you, and I'm sure you're aware, Halliburton had been reserving for asbestos exposure for a long period of time. And my question to you is: Which statement in your mind is this a partial corrective disclosure of?

A. I would say generally the statements relating to the reserve for the asbestos liability.

Q. Which one?

MS. BOIES: If you can pin it down to one statement.

MR. STERLING: Caryl's point is a fair one.

Q. Can you attribute it to a specific statement or are you attributing it to the company's asbestos reserves?

[114] A. I think I said earlier I was attributing it generally.

Q. To the company's general statement about asbestos reserves?

A. Yes.

Q. As opposed to any particular statement?

A. Well, there were many statements made in the class period, but I'm not attributing paragraph 75 to a particular statement.

Q. And there were many statements before the class period and you're not attributing to any one of those either, correct?

A. I didn't look at statements before the class period.

Q. On the issue about asbestos reserves, you have, among other things, looked at a lot of analyst reports about Halliburton, correct?

A. Yes.

Q. You understood, did you not, through your work on this case that what [115] Halliburton was doing throughout the class period was booking reserves for asbestos exposure for open or pending claims?

MS. BOIES: Can you read back the question.

MR. STERLING: Let me try it again. That didn't —

Q. You understood from your work on this case, did you not, that what Halliburton was doing with respect to asbestos reserves was booking reserve for its pending or open claims?

A. I don't have anything specifically in mind about that. If you want to point me to something where that is specifically what they said, I didn't think of it in those terms.

Q. Let me ask it thisway: You understood, did you not, that throughout the class period, or at no time during the class period did Halliburton suggest to the marketplace that its current asbestos reserve was intended to apply to whatever future exposure the company had to [116] asbestos, no matter how far down the road?

A. As I said earlier, I don't have a specific — I didn't think of it in that way.

Q. Correct, because what the company did, and the company was very clear about this, was their methodology said, whenever we get a new asbestos claim, we look at what our historical net cost of resolving it is and that goes on the books, in so many words?

MS. BOIES: Objection. Is that your testimony of what they have done or are you asking if she agrees with that? I'm not clear that was even a question as much as a statement.

A. I don't know. You would have to show me the company statements to that effect.

Q. You don't recall seeing the company's description of the asbestos reserves and its methodology for it?

A. I recall looking at it generally, but that wasn't something I was looking at [117] specifically so I don't recall specifically what was said.

Q. But you do recall looking at analyst reports, correct?

A. Yes.

Q. And some of those analyst reports commented or opined about the company's asbestos exposure, did they not?

A. Some of them did, yes.

Q. And would you agree with me that all of the analysts who were following Halliburton whose reports you saw at least understood that Halliburton was reserving only for pending or open asbestos claims as opposed to whatever the future universe of asbestos claims may be?

A. You would have to show me the specific analyst reports.

Q. Do you recall ever seeing an analyst report during the class period in which the analyst was professing a belief or an understanding that Halliburton's asbestos reserve was intended to apply for ad infinitum?

[118] A. I don't recall one way or the other.

Q. The bottom line is that the analysts certainly understood that the asbestos reserve was intended to apply to only the pending claims, correct?

MS. BOIES: Objection. Form of the question, and again she already testified that she doesn't recall what the analyst report said, and you're now asking her to draw a conclusion about things that she says she doesn't recall.

Q. As we sit here today with all the analyst reports that you have seen, can you recall a single analyst report during the class period which reflected an understanding from the analyst that he or she thought that the company — that the company's asbestos reserve was intended to apply to the entire future of any asbestos exposure that the company may have?

A. I don't recall one way or the other.

[119] Q. Working backwards on the negative stock price days, the next to last one is December 4 of '01. If you look at paragraph 71 on page APP.102.

That is an announcement about a bad jury verdict in an asbestos case in Texas, correct?

A. Yes.

Q. And, again, I take it you're not saying that the company ever said we're going to win that case in Texas to the marketplace, or we have nothing to worry about, we're never going to get popped in a bad asbestos verdict, correct?

A. I don't recall that specifically, no.

Q. I take it in your mind you relate this announcement on December 4th to all of the company's prior disclosures about asbestos reserves?

A. That's correct.

Q. Now, let's go back to October 31, working backwards in time. Paragraph 62 on page APP.100. Am I correct on that?

[120] A. Yes.

Q. The disclosure there was about an adverse jury verdict in Mississippi, correct?

A. Yes.

Q. And as with the other disclosures of bad jury verdicts, you're not saying that the company ever said to the marketplace, we're going to win this case in Mississippi, are you, correct?

A. I don't recall anything about what the company said about the Mississippi verdict before that day, or the Mississippi case.

Q. If anything, correct?

A. Correct.

Q. In your mind, this disclosure on October 30th relates back to all the company's prior statements about asbestos reserves, correct?

A. Generally, yes.

Q. Next is August 9th of '01, which is, I believe, paragraph 60 on page APP.099. Is that correct?

[121] A. Yes.

Q. And the company statement there is actually a 10Q, correct?

A. Yes.

Q. And a 10Q has a lot of information in it, does it not, typically?

A. Yes.

Q. It is a quarterly news report or a quarterly financial statement, correct?

A. It's a quarterly financial filing with the SEC.

Q. With multiple pieces of information, correct?

A. Yes.

Q. And I take it, again, you would, in your mind, the asbestos related disclosures in the 10Q released on August 9, '01 relate to all the company's prior statements about asbestos?

A. Well, as I said earlier, I didn't think in terms of matching particular prior statements to these disclosures.

Q. So my statement is correct?

A. In general, yes.

[122] Q. The next one is June 29 of '01, and that's in paragraph 54 on page APP.096.

Do you see that?

A. Yes.

Q. And the specific company statement there was, "The announcement following the close of the market on June 28th that Harbison had requested the company's financial assistance with asbestos claims that Harbison had agreed to assume back in 1992."

A. Yes, I see that.

Q. Had the company ever said that Harbison Walker —

MR. STERLING: Actually, let's mark this as the next exhibit. I'm sorry.

(Nettesheim Exhibit 3, News Release, marked for identification, as of this date.)

BY MR. STERLING:

Q. Is Exhibit number 3 the news release that you reference in paragraph [123] 54?

A. Not exactly. I reference a — the news release Dow Jones News Service, and this appears to be — and that

was retrieved from the SEC website. It may be the same, but I don't know that for a fact.

Q. Is it your testimony that sometime — that prior to June 28th, 2001, Halliburton at some point said that Harbison will never request or need our assistance on any of the asbestos claims they agreed to assume back in 1992?

A. No, that's not my testimony.

Q. Is it your testimony that this was — this announcement, June 20th, 2001, was some announcement that Halliburton was required to make earlier than it did?

A. No, that's not my testimony.

Q. Is it your testimony that the request by Harbison for assistance on the asbestos claim that Harbison agreed to was something that should have been predicted by Halliburton and disclosed to the [124] marketplace prior to June 28, 2001?

A. It's not something I examined so it's not my testimony.

Q. So in your mind, this news release on June 28, 2001, was that a partial disclosure of, or is it, again, all of the company's prior statements about asbestos?

A. It relates to the allegations regarding the under reserving of the asbestos reliability.

Q. How does it relate?

A. It is talking about asbestos claims and the potential asbestos liability of Halliburton.

Q. And that's a sufficient link in your mind?

A. Yes.

Q. And next one is December 22 of 2000. We're working in reverse chronological order here.

I believe that's discussed in paragraph 44 on page APP.091.

A. Yes.

Q. And this is a pre-announcement of [125] earnings and announcement of the unveiling of the restructuring of the engineering and construction units, correct?

A. Yes.

MR. STERLING: Let's mark that as the next one.

(Nettesheim Exhibit 4, Announcement, marked for identification, as of this date.)

BY MR. STERLING:

Q. Is Exhibit 4 the announcement that you reference in paragraph 44?

A. This isn't exactly the form that I have seen it in, and it has the same title, and it looks like a news wire, and I reference the PR news wire.

Q. Would you agree with me that there are certainly multiple pieces of information in that news release?

A. There is information in the news release. I don't know how you want to parse it.

Q. In your mind, is this one piece of information or multiple pieces of [126] information contained in Exhibit number 4?

A. Well, I think it is referring generally to the restructuring and to the charges. It refers to generally the engineering and construction projects.

Q. And it talks about reorganization charges?

A. Yes, that's what I said earlier.

Q. And it talks about the backlog in engineering and construction, correct?

A. There is — well, there is — I mean, generally, it contains information about the engineering and construction business. And it gives you some information about that business.

Q. And it also provides earning guidance, does it not, for the fourth quarter of 2000?

A. Yes, it does.

Q. Would you agree with me that we have multiple pieces of information in Exhibit number 4?

A. I don't know how you would describe multiple pieces of information. [127] There is information about the engineering and construction business, and then there is a description of different aspects of engineering and construction business.

Q. And in your mind — well, as to this news release, we can agree that you did no statistical, mathematical or econometrical analysis to determine which piece of information moved the stock price down that day?

A. Well, I think, as I said in my report, I attribute — I did the statistical analysis which looked at the declines in the stock price on the 21st and 22nd of December, and attributed it to the information regarding the changes with respect to the engineering and construction business.

Q. But my question is: Did you do any statistical or mathematical or econometric analysis to reach that conclusion?

A. Yes. As I said, I looked at the company specific stock returns on that day [128] and a statistical analysis.

Q. We're going beyond — we found a long time ago that you saw a statistically significant negative price decline. Now I'm asking: Did you do any mathematical, statistical

or econometrical analysis after that to determine which piece of information that day drove the stock price?

A. Well, I think looking at all of the news, the analyst reports, looking at the changes in the analyst models.

Q. Looking at news reports is not statistical analysis.

A. Well, I looked at all of the news that I could find at this point. So it wasn't a picking and choosing of the news.

Q. I didn't suggest that it was.

All I'm suggesting is that anybody can look at the news. My question is: What statistical or mathematical or econometrical analysis did you do, if any, to try to delineate which piece of information that day, or pieces of [129] information, impacted the stock price?

A. On this particular day, I don't recall if I looked at the analysts — there were some discounted cash flow analyses, which you have characterized that anybody could read and understand. I'm not sure how many people understand discounted cash flow analysis with the discount rates and growth rates and how they are mathematically applied. But that is among the things that I have discussed, those are things that I would have looked at.

Q. But there is no such analysis by you reflected in your report, correct?

A. Well, I think it is clear in my report what I looked at. You have to show me the analyst report to see whether they attached discounted cash flow analysis to them. I don't remember which ones did or which ones did not.

Q. As to the negative stock price movement on December 22, 2000, does your report reflect any statistical, [130] mathematical or econometrical analysis performed by you to determine which pieces of information caused the negative stock price?

A. I've described what I have done.

Q. My question was: Does your report reflect any?

A. My report reflects exactly what I have done.

Q. And it doesn't reflect any statistical analysis of the nature that I just described, does it?

MS. BOIES: Objection. Asked and answered.

A. I think it reflects the statistical analysis that I did.

Q. And on this same issue, in your mind, this is a corrective disclosure or partial corrective disclosure of what statements made by Halliburton?

A. This is related to the — what's generally called the unapproved claims or the cost overruns in the engineering and construction units.

[131] Q. And how in your mind is it related to the unapproved claims issue?

A. It's my understanding that those relate to cost overruns.

Q. How?

A. I have that understanding from the complaint.

Q. What's the relationship?

A. From reading the complaint, it's my understanding that the unapproved claims represent cost overruns in projects.

Q. And I take it in your mind if there is a negative stock price movement of a statistically significant amount, and in the day preceding that movement there was some company announcement about fixed price contracts, whatever it may be, that is a sufficient relationship in your mind to make this a corrective disclosure or partial corrective disclosure?

A. In this case, yes.

Q. Looking at the efficient market hypothesis, getting back a little bit to [132] the theory again, if we look at — I'll be concrete about this. On the accounting for unapproved claims, would you agree with me, Miss Nettesheim, that if, in fact, the company disclosed the change in its methodology, and the new methodology in its 1999 10-

K, that under the efficient market hypothesis, within a reasonably short period of time, one day, two days, three days, the market is going to understand that?

A. I think that would depend on the circumstances. I'm not an accountant.

Q. What circumstances would factor into that?

A. I think you would have to look at what was disclosed at the time and what was the understanding as to what that meant at the time, if there was an understanding. There could be a variety of things that one would look at.

Q. The company says, our accounting policy for unapproved claims is we book them when we believe they are probable of [133] collection. That disclosure is made on day X. Would you expect that to have any impact at all on the stock price in a class period that starts six months after X?

A. No, I think the stock price would react in less time than six months.

Q. Within a short period of time whenever X is, correct?

A. To whatever understanding there was to that statement.

Q. Next date working backwards is October 25, 2000, which is paragraphs 32.

MR. STERLING: Let's mark this as the next one, please.

(Nettesheim Exhibit 5, Press Release, marked for identification, as of this date.)

BY MR. STERLING:

Q. Exhibit number 5 is a Halliburton press release dated October 24, 2000, correct?

A. Yes.

Q. These are sometimes called [134] earnings releases?

A. Yes.

Q. And you're aware from your work in this case that it was Halliburton's practice to release its earnings releases following the close of the market on a particular date as opposed to some companies who may do it before a market opens?

A. Yes.

Q. So it would be your understanding that this earnings release came out after the market closed on October 24th of 2000?

A. That is my understanding.

Q. So paragraph 32, which talks about the company's October 24th announcement, in fact, what you're referring to is a lot of information in Exhibit number 5, correct?

A. I'm sorry, I'm just confirming my recollection. I believe the information that I talk about in Exhibit 32 came out in the conference call and not in the press release.

[135] Q. And the press release you're referring to is Exhibit 5, the earnings?

A. The press release that you handed to me?

Q. Yes.

So is this an example of multiple pieces of information hitting the market simultaneously?

A. There is — well, there is the press release which discusses the company as a whole, and there is the conference call, and there is the news and commentary which addresses primarily the restructuring.

Q. And typically the conference call comes right on the heels of the earnings release, correct?

A. That's my understanding.

Q. So in this situation, after the market closed on the 24th, the company announces earnings, and then right after that, they have a conference call?

A. That's my understanding of what generally happened, yes.

[136] Q. So the trading on the 24th doesn't reflect any of that information, but the trading on the 25th reflects all of it, correct? By all that information, I mean — what came out in the earnings call and in the earnings release?

A. I didn't look at the after market trading on the 24th. I looked at the reported trading on the 25th.

Q. Understood.

But my statement is correct, right?

A. With my explanation, yes.

Q. And you believe that this information in the news release and in the earnings call is a corrected disclosure of what prior statement by the company?

A. Actually, it was the information in the conference call with respect to the restructuring, and that is related to the allegations regarding the unapproved claims or cost overruns and the allegations regarding the lack of synergy from the Dresser merger.

[137] Q. And how is it related to the accounting for unapproved claims?

A. The restructuring, and this was made clearer in the December 21, 22 information, it's related to the operational

problems of what I call cost overruns in the engineering and construction business.

Q. I'm sorry, you lost me there. Could you repeat that?

A. Could you read back my answer, please?

(Record read)

Q. Are you satisfied with that answer?

A. Yes.

Q. Can you attribute it to any particular statement by Halliburton?

A. I did not go back and match this partial disclosure with any particular statement.

Q. And how do you relate this, in your mind, partial disclosure with any statements made about Dresser synergies?

[138] A. Well, part of the construction business that was restructured, it's my understanding that part of that business used to be Dresser Industries.

Q. And the basis for your understanding is what?

A. Description of the business, I believe from the 10-Ks.

Q. Can you attribute it to any particular statement the company made about Dresser synergies?

A. No. As I said, I did not go back and match this particular disclosure with a prior specific statement.

Q. Let's go to October 23, 2000, which is paragraph 30 on page APP.085.

Do you see that, ma'am?

A. I'm sorry, would you say that again? I've lost it.

Q. Fair enough.

I'm looking at the October 23, 2000 date in which there was a statistically significant stock price decline and a company statement, correct?

[139] A. Yes.

Q. And that's discussed on page APP.085, specifically paragraph 30, correct?

A. Yes.

Q. And on that date, the specific company announcement was that it's Brown Services unit was a target of a federal grand jury investigation, correct?

A. Yes.

Q. Do you relate that statement to any prior statement made by Halliburton?

A. No, I do not.

Q. So this is not what you call corrective disclosure?

A. That's correct.

Q. Let's go now to June 8, 2000, which is paragraph 28 on page APP.083.

A. Yes.

Q. And this is a date in which your analysis reflects that the Donaldson, Lufkin & Jenrette analyst changed his estimate after meeting with somebody from the company; is that correct?

[140] A. Yes.

Q. Does your report reflect in any way, shape or form what was discussed between the analyst and somebody at the company?

A. Not in my report, no.

Q. Do you claim that the June 8, 2000, whatever it was, was a partial disclosure of any prior statement made by Halliburton?

A. No, I did not.

Q. Let's go now to January 5, 2000, which is our next to last one in reverse chronological order, which is on page APP.078, paragraph 19.

A. Yes.

Q. This is another one where I believe there is no company statements, but there is an analyst changing his or her rating, correct?

A. There are two analysts.

Q. Two analysts, I'm sorry.

A. And one of the analysts refers to a conversation with the company.

[141] Q. And specifically you're referring to the Merrill Lynch analyst, Simpson, who notes reduced expectations for offshore construction results reduced growth estimates for oil field spending for outside North America and less powerful synergies from the Dresser merger than he had envisioned?

A. No, I'm referring specifically to the analyst, Carol Lau, with Brown Brothers Harriman.

Q. I'm sorry, okay.

And anywhere do those analysts report what they were told by the company?

A. I need to look at the Brown Brothers Harriman analyst report to see if there was a specific quote from the company. I don't recall.

Q. Is whatever was said on January 5, 2008 corrective disclosure or partial corrective disclosure in your mind?

A. I characterized it as a partial disclosure.

Q. And a partial disclosure relating [142] to what prior statement relating to the company?

A. What I describe in shorthand the unapproved claims for cost overruns and the lack of synergies from the Dresser merger.

Q. Any particular statements or just those statements generally?

A. When you say particular —

Q. Any particular statement about Dresser synergies or just all statements about Dresser synergies?

A. The prior statements about Dresser synergies.

Q. All of them, right?

A. Yes.

Q. Any particular statements about unapproved claims or all of them?

A. Not a particular statement, but unapproved claims or cost overruns, or in this case, omissions or statements about claims, cost overruns.

Q. Just the company statements generally on those topics, correct?

[143] A. Yes, or omissions, yes.

Q. And then our last one is October 25th of '99, which is discussed on APP.074, paragraph 14.

A. Yes.

Q. I believe we looked at this one in some detail already, have we not?

A. Yes.

MR. STERLING: Let's go off the record for a minute.

(Thereupon, a recess was taken, and then the proceedings continued as follows:)

EXAMINATION BY MR. GONZALEZ:

Q. Miss Nettesheim, I have a few quick questions for you.

In your testimony earlier, you identified 11 dates in which you say there was a statistically significant change

in the stock price that was accompanied by a statement with Halliburton.

Do you recall your testimony?

A. I recall generally, I didn't [144] count, as I said earlier.

Q. And Mr. Sterling just went through these dates with you with respect to statements that may have accompanied those dates made by Halliburton?

A. Again, I wasn't counting. I don't know if he missed one or two, but we went through dates.

Q. In your review of the information that was provided to you, whether it was analysts reports, any kind of reports, any information you have looked at, with respect to the October 5, 1999 date, which is paragraph 14 in your appendix, were you able to identify any statement that was made by Dave Lesar that accompanied this partial disclosure on October the 5th, 1999?

A. I looked at it with that in mind. I don't see quoting a statement from him in my report, but I don't recall in any of the news or in the analyst reports that I looked at, and there were several pieces of news and analyst reports, I don't [145] recall.

Q. And do you recall if in the disclosure that was made on October the 5th, 1999 whether you looked at any statement by Dave Lesar, any previous statement that was false and misleading?

A. As I said earlier, I don't recall statements specifically attributed to Mr. Lesar on that date. I don't have here in my report everything that was published on that date, but I don't have anything in the report specifically attributed to him on that date.

Q. The next date you identified was January the 5th, 2000, which is paragraph 19 in your report, in the appendix of your report.

If you look at — that same question, were you able to identify any statement, prior statement made by Dave Lesar in connection with the disclosure of January the 5th, 2000 that you reviewed?

A. I don't recall if the Brown Brothers Harriman report attributed a

* * *

[162] dollar verdict that came down; is that correct?

A. Yes, it is.

Q. Prior to December 4th of 2001, in preparing your report or appendix, did you identify or look at any statements that were made by Dave Lesar about this asbestos case that was pending in Texas that resulted in this 65 million dollar jury verdict?

A. Can you read back the question to me?

(Record read)

A. I don't recall if I saw a statement from Mr. Lesar about this case, about the Texas case filed in Texas.

Q. In preparing this type of report or an appendix, if you identify statements made by a CEO or chairman of the board or somebody at that level, is it your practice or custom to put those statements in your report or appendix?

A. Not necessarily.

Q. Why not?

[163] A. The purpose of the statements that I did put in my report were to summarize and to be informative as to what was said that day and what was reported on that day. I think it is fairly — I think it is completely clear that I did not include verbatim each and every news report, analyst report in their entirety for these dates.

Q. In preparing — because you were asked — according to your testimony, you were asked to do a loss causation analysis as part of your engagement in this case?

A. Yes.

Q. And as part of loss causation analysis as you understand it, and I don't mean just merely in that sense, are you just crunching numbers or are you looking to prior statements made by officers of the company?

A. In loss causation, I was asked to determine — well, to determine the cause of the decline in the stock price.

Q. In doing that, did you just crunch [164] numbers or did you go back and look at prior statements by the company or officers of the company?

A. It details a large number of steps and analysis that I described. Do you want me to describe all of that again?

Q. I think your testimony on that is on the record.

Is it your practice to look at prior statements made by officers of the company?

A. I looked at all of the news, basically anything that I could find, in order to determine what caused the stock price to decline.

Q. And the reason why, as part of your loss causation analysis, is you're looking at prior statements by the company or officers of the company to identify that the corrective statements that are being identified in your report relates back to a prior statement that was not accurate; is that correct?

A. Well, as I said earlier, I did not [165] link or match up statement by statement earlier statements with the partial disclosures I discussed.

Q. Did you not do that for purposes of this report?

A. One of the purposes of this report was to analyze loss causation.

Q. But going back to your statement just now, you did not link up any partial disclosure statements with prior statements that were made by the company or officers of the company?

A. Not specifically, no.

Q. And do you normally do that when you do a loss causation analysis?

A. By normally do that, you're referring to do I normally go back and look at statements by executives of the company?

Q. Is it part of your methodology, part of your protocol to go back and look at — look at the disclosure statement, partial disclosure statement, and link it back to prior statements made by the [166] company or its officers?

A. Yes, on occasion I have done that.

Q. On occasion.

Is there a particular reason in terms of your methodology or protocol that you use how to decide when to use it and when not to use it?

A. It depends on the circumstances of the case, the allegations. It depends on what I was asked to do. There

is a variety of factors that would enter that. There isn't one and only one way.

Q. And in terms of what you were asked to do in this case, or your approach to how you were asked to analyze this case, you determined in your professional opinion that linking up a partial disclosure statement to prior statements by the company or its officials was not necessary?

A. I was asked to determine the causes or the reasons for the decline in the stock price.

Q. But you made — in your [167] professional opinion, you made the decision not to look at the partial disclosure statement and try to link it back to the previous statement that allegedly was not accurate?

A. Well, the methodology I used was the appropriate methodology of what I was asked to do.

Q. That methodology did not include linking the partial disclosure statement to the prior statement that allegedly was not accurate?

A. Yes, I said earlier I did not link particular statements to the partial disclosure statement.

Q. I'm not questioning your approach. I'm trying to understand the approach that you used.

Appendix C

The next statement you identified in your report as partial disclosure was December 7th 2001. And that's in paragraph 75 of your opinions. And that has to deal with the Maryland verdict, 30 million dollar verdict.

[168] In preparing paragraph 75 of your report, did you look at any particular statements made by Dave Lesar?

A. Prior to December 7th, 2001?

Q. Yes, ma'am.

A. No. As I recall, I did not go back and look at prior statements as I was writing paragraph 75 of the appendix to my report.

Q. In your earlier testimony, you were identifying in terms of methodologies that you use, you referred to the discounted cash flow approach; is that correct?

A. No, that's not correct.

Q. What is a discounted cash flow?

A. It is an analysis that entails projecting cash flows, which are — cash flows are the net inflows and outflows. I assume can apply to many different things, which I assume you're talking about company evaluation, or at least that's what I'm referring to in this case, so it would be a projection of income flows [169] versus outflows, which would be expenses or any other type of outflow. And the

net of that each year would be a cash flow for that year, and then apply — in order to project cash flows, that entails taking into account company specific growth rates, inflation, growth rates that you may glean from industry factors or from industry comparables. There are several steps. I'm sure I'm going to leave out some.

The discounted cash flow approach also entails at least one discount rate. There may be one discount rate applied to near term discount or long term cash flows coming up with that discount rate is a — you need to apply analyses of inflation rates, projected inflation rates, beta, which is simplified term, talking about the relationship between the company's returns and market and industry returns. The discount rate may or may not, but can incorporate risk premium of various times.

And that's not exhaustive, but

* * *

[174] causation?

A. No, there is not.

MR. GONZALEZ: I pass the witness.

EXAMINATION BY MR. STERLING:

Q. If you'll look, please, at Exhibit number 15 to your report. It's appendix page 197.

A. Yes.

Q. Under the summary output at the top of that page.

A. Yes.

Q. It says, multiple R squared.

Does that tend to be R squared or multiple R?

A. That's the R squared, and this is a multiple regression because there is more than one independent variable so it is the R squared.

Q. Thank you.

If you look at page in your report 9, APP.011, paragraph 21. It says, "according to one anthority", and then you [175] have a quote?

A. Yes.

Q. Who is that authority?

A. That was the camera court citing Bromberg.

Q. And Bromberg is not an econometrician or a statistician, is he?

A. That I don't know. The book describes more fully in footnote 10.

Q. If you'll turn to page 38, APP.040. I don't mean to replow old ground, but October 5, '99 stock price decline. We talked about the earnings guidance, the lower than expected profits of the joint ventures, and so forth.

If you'll turn to page 39, the next page, the second full paragraph, it says, "Analysts agree it was a good move and that the earning shortfall will be temporary."

Do you see that?

A. Yes.

Q. So was that aspect, that piece of news, was that considered good news or bad [176] news by the marketplace?

A. I took it to mean that given the problems with the joint ventures, they agreed that it was a better move to sell them than it would have been to keep them.

Q. Looking at paragraph 86 on page 8 APP.041, you quote from a CIBC report, do you not?

A. Yes.

Q. And if you look at the top of the next page, it says, "The company's announcement of weakness across virtually every business line in 3Q, the third quarter, is not surprising given the slower than anticipated oil field recovery. Halliburton is the latest company to confess to this situation."

If what Halliburton is experiencing is an industry wide phenomenon, how do you relate that or link that to any of the allegations in this case?

A. Well, this is not the only thing that Halliburton was experiencing, and I [177] do have an industry index in my analysis which would pick up at least a portion of the industry effect.

Q. But your industry index also — let me back up.

But you also show a number of days in which there was a statistically significant return based upon your industry index, but there was no information or news that you could find that drove that return, correct?

A. That's correct.

Q. Is there anything that you did to try to break out, other than your industry wide index, industry wide phenomena from company specific phenomenon?

A. The industry index was the primary reason of doing that, the regression analysis and industry index.

Q. When you constructed your index, did you try adding or subtracting other companies to see if that improved the expandability of your model?

A. What I did is I — Exhibit 16 to [178] my report, and then I explained this in the appendix to my report. I picked a large number of companies that were components of, let's

say, call it pre-made indices that included Halliburton. So then because these companies were in the same index or a number of indices as Halliburton, they were at least considered comparables by the entity that created the index, whether it was FactSet or Bloomberg or some other data source.

I looked at analyst reports and pulled out companies that were considered competitors from the analyst reports, and then individually I determined whether the companies on an individual basis were correlated to Halliburton. And then I made an index of the companies that were correlated with Halliburton during the control period, with the exception of the one company that had the securities litigation pending.

Q. And I understand all of that.

My question is: Once you did [179] that, did you then try to add or subtract other companies to see if that explained — if that increased the explanatory power of your model?

A. No, because I'm including all of the companies that I determined were — well, actually that were considered comparables or competitors. I'm not including companies that were correlated and I wasn't trying to pick and choose here. Starting with as broad a base as I thought was reasonable and then including all of the companies that were statistically correlated.

Q. If you'll turn to page APP.047.

Looking at the carry over paragraph at the top, you're talking about the October 25, 2000 price decline?

A. Yes.

Q. And in your last sentence, it reads, "Thus, a significant portion of the stock price decline on October 25, 2000 was related to the company's booking unapproved claims on fixed price contracts [180] and lack of benefits from the Dresser merger alleged in the complaint."

Did I read that correctly?

A. Yes.

Q. Significant portion, the word significant there, you weren't referring to significant statistics, were you?

A. No.

Q. And the relation, the way you use related there is simply, as you explained before, if it had something to do with, as you perceive it, fixed price contracts or unapproved claims, then it relates back to the prior statements?

A. Cross overruns, yes.

Q. And not to any particular statement, correct?

A. Yes. As I said, I didn't link specific prior statements to disclosure statements.

Q. And looking back at the prior page, paragraph 93, where it says "the company made a partial disclosure concerning the company's booking [181] unapproved claims on fixed price contracts", what specific disclosure are you referring to there?

A. That relates to the — in general, on October 25th, the 24th and 25th disclosures regarding the operational problems in the engineering and construction units and then the —

Q. If I can interrupt you. Was there any specific disclosure about unapproved — booking unapproved claims?

A. Nothing that I recall that used the words unapproved claims. I was about to say, as I said earlier, I also linked this with the December 21st, 22nd disclosure where there were the charges for the cost overruns.

Q. If there is a disclosure of bad news that in any way, shape or form relates to fixed price contracts, then it relates to the allegations about unapproved claims, correct?

A. Yes, in this case I did.

Q. Now, if you will turn with me,

* * *

v.

HALLIBURTON COMPANY, et al.,

Defendant.

No 3:02-CV-1152-M

EXPERT REPORT OF LUCY P. ALLEN

November 16, 2007

I. SCOPE OF ASSIGNMENT

We were asked by Counsel for Halliburton Co. ("Halliburton") in *Archdiocese of Milwaukee Supporting Fund, Inc., et al. v. Halliburton Company, et al.* to review the Report of Jane D. Nettesheim ("Nettesheim Report") and Lead Plaintiff's Motion for Class Certification and Incorporated Memorandum of Points and Authorities in Support Thereof ("Plaintiff's Motion"). In particular,

we were asked to assess Ms. Nettesheim and Plaintiff's analysis of loss causation in the above matter.

II. SUMMARY OF FINDINGS

We found that the Nettesheim Report has not proven loss causation for any of the allegations in this matter, and that much of the evidence presented in Ms. Nettesheim's report is contrary to the claim of loss causation. Plaintiff's allegations fall into three categories: the integration of Dresser Industries, Inc. ("Dresser"), the booking of unapproved claims, and asbestos reserves.

We found the following:

- **Ms. Nettesheim's event study is methodologically flawed.** It does not adhere to the standards of academic literature, including the academic article she cites on the topic. Her tests of statistical significance are invalid. In addition, Ms. Nettesheim's industry index is inappropriately constructed and her market index is not replicable based on the information provided.

- **Ms. Nettesheim does not prove loss causation for the allegations regarding the integration of Dresser.** The Nettesheim Report inappropriately combines the allegations regarding the integration of Dresser with the allegations regarding unapproved claims. Ms. Nettesheim does not establish causation for the Dresser integration allegations, but rather looks at whether a stock price decline relates to the engineering and

construction segment of Halliburton's business and she does so in an inappropriate manner. She fails to establish that the alleged curative disclosures are curative of alleged misrepresentations. Additionally, on each of the alleged curative disclosure dates regarding the integration of Dresser, non-culpable news was released and Ms. Nettesheim fails to account for it.

- **Ms. Nettesheim does not prove loss causation for the allegations regarding the accounting of unapproved claims.** The alleged curative disclosures are not curative of alleged misrepresentations regarding the booking of unapproved claims. Ms. Nettesheim's event study analysis shows that there was no statistically significant price reaction to the actual disclosure of a change in accounting for unapproved claims.

- **Ms. Nettesheim does not prove loss causation for the asbestos reserves allegations.** Ms. Nettesheim's loss causation analysis is not based on an understanding of Plaintiff's allegations. She fails to link the alleged misrepresentations to curative disclosures. In addition, there is no consistency in her choice of alleged curative disclosure dates for the asbestos reserves allegations and her analysis of Halliburton's stock price movements. Further, she fails to control for changes in the asbestos litigation environment, confounding news and the effect of uncertainty on Halliburton's stock price.

- **There is no evidence in Ms. Nettesheim's event study analysis that the alleged misstatements inflated Halliburton's stock price.**

III. QUALIFICATIONS AND REMUNERATION

A. Qualifications

I am a Senior Vice President of NERA Economic Consulting ("NERA"), a firm with about 600 consulting economists who operate out of 22 offices worldwide. I am a member of NERA's Securities and Finance Practice, which dates from the early 1970s and employs a research staff of about two hundred professionals with economics, finance and mathematics degrees. The practice counts as its clients major securities exchanges, risk managers, principals needing valuation services, and parties in litigation.

I have a B.A. from Stanford University, an M.B.A. with a concentration in Finance and Accounting from Yale University, and M.A. and M. Phil. degrees in Economics, also from Yale University. Prior to joining NERA, I was an Economist for both former President Bush's and President Clinton's Council of Economic Advisers. In my 13 years at NERA, I have been engaged as an economic consultant or expert witness in numerous projects involving securities and financial economics. In the course of this work, I have analyzed the effect of information on the stock prices of over 100 companies. My resume with recent publications and testifying experience is included as Attachment A.

B. Remuneration

NERA is being compensated for time spent by staff members at standard billing rates and for out-of-pocket expenses at cost. NERA currently bills for my time at $585 per hour.

IV. MATERIALS CONSIDERED

In preparing this report, we considered the following materials:

1. Nettesheim Report, dated September 17, 2007, and supporting materials;

2. Deposition of Jane Nettesheim ("Nettesheim Deposition"), dated October 16, 2007;

3. Fourth Consolidated Amended Complaint for Violation of the Securities Exchange Act of 1934 ("Complaint");

4. Lead Plaintiff's Motion for Class Certification and Incorporated Memorandum of Points and Authorities in Support Thereof ("Plaintiff's Motion");

5. Price and trading volume data for Halliburton, industry and market indices, and peer companies from FactSet Research Systems, Inc. and Bloomberg L.P.;

6. Index price data from The Center for Research in Security Prices ("CRSP");

7. Analyst reports covering Halliburton, peer companies and its industry;

8. SEC filings for Halliburton and peer companies;

9. Data on analysts' estimates from I/B/E/S;

10. Press coverage on Halliburton and peer companies from news services including Factiva and Bloomberg L.P.;

11. Court decisions in securities class actions; and

12. Textbooks and academic literature on finance and statistics.

V. SUMMARY OF PLAINTIFF'S CLAIM OF LOSS CAUSATION

According to Plaintiff's Motion and the Nettesheim Report, Ms. Nettesheim finds loss causation for the allegedly false and misleading statements cited in the Complaint. Plaintiff's Motion classifies the allegations into three categories:

1 "[I]mproper booking of unapproved claims as revenue" (herein, unapproved claims);

2 "[K]nowingly inadequate reserves for asbestos liability" (herein, asbestos reserves); and

3 "[S]evere but undisclosed problems associated with the acquisition and integration of Dresser" (herein, integration of Dresser).[1]

The Complaint is consistent with this categorization of allegations, while the Nettesheim Report has only two categories of allegations. Ms. Nettesheim does not distinguish between allegation #1 (unapproved claims) and allegation #3 (integration of Dresser) above, and appears to consider them interchangeable.

Plaintiff claims that Ms. Nettesheim has proven loss causation by finding statistically significant negative price reactions to alleged curative disclosures of the alleged misrepresentations. The Nettesheim Report finds 11 such alleged curative disclosures, 6 of which are not alleged as curative disclosures in the Complaint:

- October 5, 1999 (not in Complaint);
- January 5, 2000 (not in Complaint);
- October 25, 2000;
- December 22, 2000 (not in Complaint);
- June 29, 2001;
- August 9, 2001 (not in Complaint);

1. Plaintiff's Motion, p. 3.

- October 31, 2001 (not in Complaint);
- November 1, 2001 (not in Complaint);
- December 4, 2001;
- December 5, 2001; and
- December 7, 2001[2]

VI. SUMMARY OF NETTESHEIM'S LOSS CAUSATION ANALYSIS

Ms. Nettesheim's analysis of loss causation involved the following three steps:

1. **An event study test of the statistical significance** of Halliburton's stock price movement on each day during the alleged class period;

2. **A review of the news** on each statistically significant day; and

3. **A determination of loss causation,** if the news on a statistically significant negative day was related to the allegations.

To perform the test of statistical significance, Ms. Nettesheim predicts Halliburton's stock price movements

---

2. Plaintiff's Motion includes a summary at p. 2. Plaintiff's Motion lists the following disclosures: October 24, 2000, December 21, 2000, June 28, 2001 and December 4-7, 2001.

on each day of the alleged class period and determines how much the actual movement differs from her predicted movement. The predicted movement is based on the result of a "market model" which estimates the relationship between the daily movements in Halliburton's stock price and the movements in the market and the industry over a control period. Ms. Nettesheim estimates her market model over the control period of one year beginning after the merger between Halliburton and Dresser. The difference between Halliburton's actual stock price movement and the predicted movement is commonly called the excess return, and is referred to by Ms. Nettesheim as the "company-specific return."

Ms. Nettesheim estimates the market model using a general market index and an industry index. For her market index, Ms. Nettesheim allegedly uses a composite index of NYSE/Amex/NASDAQ obtained from CRSP,[3] while her industry index is composed of companies (allegedly mentioned in market commentary on Halliburton) that individually explained Halliburton's stock price movement over the control period. Ms. Nettesheim included all companies in her industry index that she tested (individually vis-a-vis Halliburton) and found to have a statistically significant relationship with Halliburton's stock price over the control period.

For every day of the alleged class period she performs a test of whether the excess return, the amount that

---

3. As discussed in Section VII.C, we were not able to identify her market index.

Appendix C

Halliburton's stock price moved more than expected given the movement in the market and industry indexes, is statistically significant. She finds 31 statistically significant price movements (24 negative and 7 positive) among the 633 trading days of the alleged class period.

Ms. Nettesheim then reviewed the market commentary in news stories and analyst reports on (or around) each of the 31 statistically significant price movements during the alleged class period.

Based on her review of the news and analyst reports, she makes a determination, without an explanation, for each of the days about whether the news appears to be consistent with the price reaction and whether the news is related to either of two categories of allegations. As discussed above, she re-categorized Plaintiff's allegations into:

1 "Booking of Unapproved Claims and Unrealized Benefits from the Dresser Merger;"[4]

and

2 "Company's Exposure to Asbestos Litigation."[5]

She concluded that 4 of the 24 negative price movements were "related" to her first category of allegations (the booking of unapproved claims and unrealized benefits

4. Nettesheim Report, p. 37.

5. Nettesheim Report, p. 55.

from the Dresser merger) and that 7 were related to her second category (the company's exposure to asbestos litigation). She further concluded that for each of these 11 days there was loss causation.

As discussed in detail below, each step of her loss causation analysis is unreliable and methodologically flawed.

VII. NETTESHEIM'S EVENT STUDY IS METHODOLOGICALLY FLAWED AND HER TESTS OF STATISTICAL SIGNIFICANCE ARE INVALID

Ms. Nettesheim performed an event study as the basis for her claim of having proven loss causation. Her event study, however, is methodologically flawed. Ms. Nettesheim first conducted a hypothesis test (actually, 633 hypothesis tests) to determine whether any of the days during the alleged class period exhibited a statistically significant price reaction. Then, for those days on which she found statistically significant price reactions, she reviewed news and analyst commentary to determine whether they contained news related to the allegations.[6] This procedure is methodologically flawed because her tests of statistical significance are invalid, and because her news analysis is not at all systematic.

The valid statistical methodology for conducting a hypothesis test is to *first* state a hypothesis to be tested

6. Nettesheim Report, ¶41-44.

(e.g., whether the price movement on a specific day is statistically significant), and *then* perform the test. Ms. Nettesheim inverts the order of these steps by performing a hypothesis test for each day during the alleged class period, thereby invalidating her tests.

More specifically, textbooks and academic articles on statistics state that the valid statistical methodology to perform an event study is to first define the period in which the event under study happens and then to perform a test of whether the stock price moved in a statistically significant manner in that period. For example, the academic article that Ms. Nettesheim herself quotes on the use of event studies, by Mitchell and Netter, contradicts her approach and states that selecting the period in which the event under study happens is the first step to be performed:[7]

> There are three basic steps in conducting an event study: (i) define the event window; (ii) calculate abnormal stock price performance around the event; and (iii) test for statistical significance of the abnormal stock price performance. . . . The first step in the event study is selecting an event window. The event window is the period when information about the event becomes available to the stock market and thus may affect the relevant company's stock price.

---

7. Mitchell, Mark L. and Jeffry M. Netter, "The Role of Financial Economics in Securities Fraud Cases: Applications at the Securities and Exchange Cominission," *The Business Lawyer*, 49, pp. 557-558.

Appendix C

One of the implications of Ms. Nettesheim's inversion of the proper order of the steps in performing an event study is that the hypothesis test loses validity and risks becoming a mere ex-post justification of a particular result. A textbook by Studenmund, *Using Econometrics*, states:[8]

> The first step in hypothesis testing is to state the hypotheses to be tested. This should be done *before* the equation is estimated because hypotheses developed after estimation run the risk of being justifications of particular results rather than tests of the validity of those results. [Emphasis in original]

This methodological error of performing a hypothesis test first and finding a justification for the result ex-post is sometimes referred to as the "Texas sharpshooter fallacy," after the example of a shooter who first shoots at a barn and then draws the target around the part of the barn where most of the bullets have clustered in order to demonstrate his prowess.[9]

9. See, for example, Inge F. Goldstein and Martin Goldstein, *How Much Risk? A Guide to Understanding Environmental Health Hazards*, Oxford University Press, 2002. Or, in the popular press, see, Atul Gawande, "The Cancer-Cluster Myth," *The New Yorker*, February 8, 1999, pp. 34-37.

Appendix C

A. Nettesheim's calculations of statistical significance are improper

The number of statistically significant price reactions that Ms. Nettesheim finds using her flawed methodology is no more than the number expected to be found exclusively on the basis of the normal daily variation of the stock price in the absence of news of importance to the market.

Ms. Nettesheim performs her tests of hypothesis at the 95% confidence level.[10] The 95% level means that, if her test is repeated many times, the test is expected to indicate 5 times out of 100 that the price movement on a given date is statistically significant even when there is no news of importance to the market, and the price moves solely due to the normal daily variation in stock prices.

Ms. Nettesheim performs her test 633 times; she performs it once for each day of the alleged class period. The expected number of days one would expect to be statistically significant at the 95% level, if stock price movements reflect only normal daily variation, is 5% of 633, or 31.7 days. Ms. Nettesheim finds that 31 days are statistically significant. Therefore, the number of statistically significant days during the alleged class period is no more than the number one would expect to find, if stock price movements reflect only normal daily variation, rather than some noteworthy event or announcement.

---

10. Nettesheim Report, fn. 9 of the Appendix.

Appendix C

In the "Reference Guide on Statistics," part of the *Reference Manual on Scientific Evidence* published by the Federal Judicial Center, the authors refer to the issue of making several statistical tests on the same dataset in the glossary under the term, "Multiple Comparisons." The *Manual* states that it is hardly surprising to find 1 out of 20 (that is, 5%) statistically significant cases when performing the test 20 times even when there is no underlying difference (that is, "under the null") due to the normal variation in the data. The *Manual* states:[11]

> **[M]ultiple comparison.** Making several statistical tests on the same data set. Multiple comparisons complicate the interpretation of a p value. For example, if 20 divisions of a company are examined, and one division is found to have a disparity "significant" at the 0.05 level, the result is not surprising; indeed, it should be expected under the null hypothesis. [p. 166]

Ms. Nettesheim finds 31 days (including her 11 alleged curative disclosures) during the alleged class period to be statistically significant; yet that number is what statistical theory tells us that we should expect to find based exclusively on the normal daily variation in the stock price during her control period. Therefore, her statistical analysis yields no evidence that the stock price declines during the alleged class period are caused by anything

---

11. Kaye, David H. and David A. Freedman, "Reference Guide on Statistics", *Reference Manual on Scientific Evidence*, (2000, Federal Judicial Center, Second Edition, pp. 83-178.

other than the normal daily variation in stock price. Furthermore, her statistical analysis yields no evidence that the stock price declines are caused by the correction of any alleged misrepresentations.

B. News days and non-news days have the same distribution of excess returns

Further evidence that Ms. Nettesheim's methodology is unreliable is the fact that her distribution of the excess returns of Halliburton's stock price during the alleged class period is no different on days when she finds news was released than on days when she finds that no news was released.

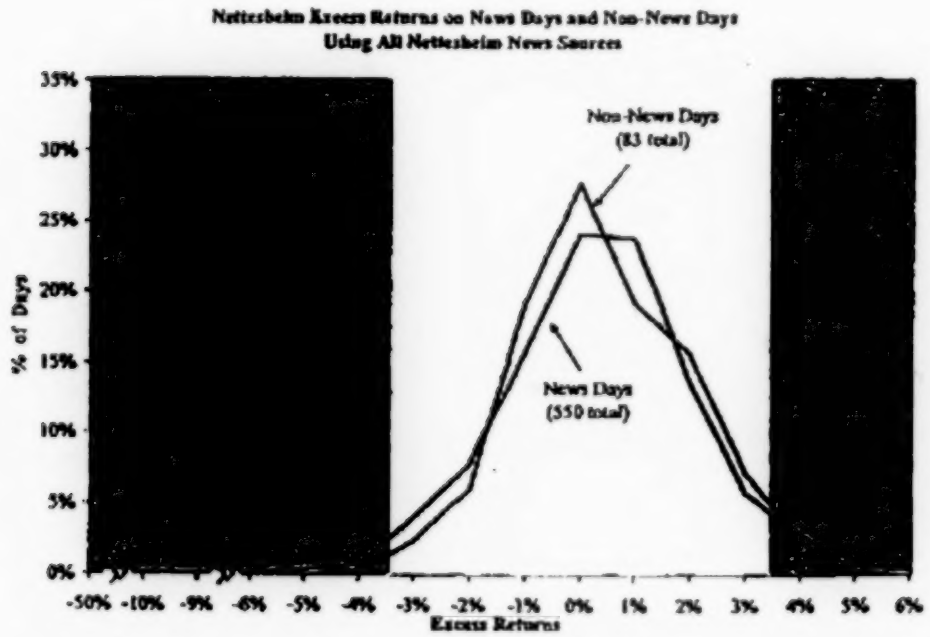
Ms. Nettesheim does not provide in her report any systematic way to distinguish between the days that she considers news days versus the ones she considers non-news days. This issue is discussed further below, in Section VII.F.

Since we are unable to replicate Ms. Nettesheim's method for determining whether a particular story counts as news, we used two alternative methods of classifying days as news days. The first method considered all days on which Ms. Nettesheim obtained a news story as news days. The second method considered only days with stories from major news sources.[12] Below, we show two charts

12. Both versions include news from Factiva that contain "Halliburton" in the headline or lead paragraph, exclude republished news, obituaries, and sports news. Major news sources considered were: The New York Times, The Wall Street

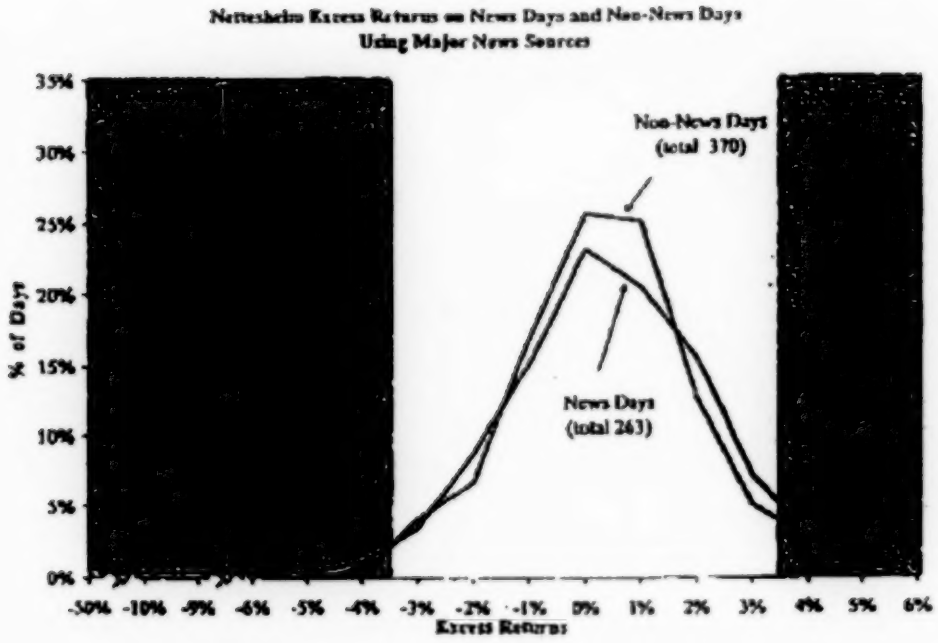
that compare the excess returns on news days to those on non-news days.

Regardless of how news was classified, both methods yield the same result: the excess returns on news days are very similar to the excess returns on non-news days. This is further evidence that Ms. Nettesheim's procedure is unreliable. In other words, Ms. Nettesheim's methodology finds that Halliburton's stock price movements on news days are very similar to those on non-news days.



Journal, PR Newswire, Reuters News, Dow Jones News Service and Business Wire. Excess returns are from Nettesheim Report, Exhibit 17; standard errors are from Nettesheim Report, Exhibit 15. News that was released after the close of the market was considered to have been released on the next trading day.

Appendix C



The charts above depict the results of each of the two methods of classifying news. The gray bands indicate excess returns that correspond to days on which Ms. Nettesheim found statistically significant price movements.

We also performed a formal test to analyze whether the distributious of excess returns are statistically different. We performed a Kolmogorov-Smirnov test for the equality of distributions of excess returns on news days and non-uews days.[13] We found no statistically

13. For a description of the Kolmogorov-Smirnov test, see, for example, Myles Hollander and Douglas A. Wolfe, *Nonparametric Statistical Methods*, 2nd Edition. John Wiley & Sons, Inc., 1999, pp. 178-179.

significant difference between the distributions of excess returns on news days versus non-news days for both sets of news sources.

C. We are unable identify Nettesheim's market index

As mentioned above, Ms. Nettesheim claims to have used a general market index obtained from CRSP, a data provider. Specifically, Ms. Nettesheim claims to have used a composite index of all stocks traded on the NYSE, Amex and NASDAQ.[14] We licensed from CRSP the data we understood from the Nettesheim Report to be the data she used, but the values were different from those that she shows in the third column of Exhibit 17 of her report. We asked CRSP to identify which index Ms. Nettesheim used based on the data in her report. CRSP was unable to identify the data on that basis or to substantiate the claim that those data were actually obtained from it.

D. Nettesheim's industry indexis not constructed properly

Ms. Nettesheim's industry index is not properly constructed. Ms. Nettesheim's industry index is allegedly composed of those companies mentioned in analyst reports on Halliburton that, according to Ms. Nettesheim's statistical tests, explained Halliburton's stock price movement over the control period. In other words, Ms. Nettesheim included all companies in her industry

14. Nettesheim Report, ¶4 of the Appendix.

index that she found to have a statistically significant relationship with Halliburton's stock price over the control period. This procedure is flawed.

Ms. Nettesheim's procedure is flawed for several reasons. For example, she attempts to isolate the decline in Halliburton's stock price that is related to allegations regarding asbestos reserves. Yet, she has done nothing to include in her index companies with similar asbestos exposure. Nothing about her procedure for selecting companies involves considering a company's asbestos exposure at all. In her testimony, Ms. Nettesheim admits that she does not know whether the companies in her index have asbestos exposure.

Q. Did any of the companies in your index have any potential asbestos exposure?

A. For these specific companies, I don't know.

Q. That's not something that you or anybody on your team tried to ascertain?

A. We relied on the indices, including them as comparables, and then analyst reports describing them as comparables. [Nettesheim Deposition, pp. 21-22]

The method used by Ms. Nettesheim for selecting companies for her industry index is based on statistical results rather than a theoretical basis for creating a comparable industry index. According to *A Guide to Econometrics*: "The first and foremost ingredient in

a search for the correct set of explanatory variables is economic theory. If economic theory cannot defend the use of a variable as an explanatory variable it should not be included in the set of potential independent variables. Such theorizing should take place *before* any empirical testing of the appropriateness of potential independent variables; this guards against the adoption of an independent variable just because it happens to 'explain' a significant portion of the variation in the dependent variable in the particular sample at hand."[15]

She claims that her industry index and statistical regression perform unusually well, explaining 77% of the total variance in Halliburton's stock return during the control period. Given that she pre-selected the companies to include in her index based on their statistical performance in explaining Halliburton's stock price during the control period, the fact that the index performed well during the control period is hardly surprising. The high level of statistical performance does not prove that the index would be a reliable benchmark to control for industry effects during the alleged class period; her index's statistical performance during the control period is something of a self-fulfilling prophecy.

Moreover, this artificially high statistical performance (R-squared) means that the standard error of her regression is artificially low. This problem is known in

15. Peter Kennedy, *A Guide to Econometrics*, Fifth Edition, The MIT Press, 2003, p. 108.

the statistics literature as overfitting.[16] This means that her test of statistical significance over the alleged class period is more likely to find events that are statistically significant.

E. Nettesheim's findings of statistical significance are neither valid nor robust

We performed Ms. Nettesheim's regression (the regression of Halliburton's returns on the returns of Ms. Nettesheim's market and industry indexes) over an alternative control period. Rather than the period of one year starting *before* the beginning of the alleged class period, the control period used by Ms. Nettesheim, we tested her model over a one-year period starting *after* the end of the class period.[17] We found dramatically

---

16. See, for example, Peter Kennedy, *A Guide to Econometrics*, Fifth Edition, 2003, The MIT Press, p. 383; Michael A Babyak, "What You See May Not Be What You Get: A Brief, Nontechnical Introduction to Overfitting in Regression-Type Models," Statistical Corner, *Psychosomatic Medicine*, 66:411-421 (2004).

17. The alternative control period is December 10, 2001 through December 9, 2002. Nettesheim's control period is October 1, 1998 through September 30, 1999. Ms. Nettesheim's control period overlaps with the alleged class period because she did not want to use a control period starting before the merger with Dresser and there was less than one year between the merger and the beginning of the alleged class period. The calculations were based on a market index from CRSP (CRSP NYSE/Amex/NASDAQ Value-Weighted Market Index) that corresponds to Ms. Nettesheim's description of the index she used. In the alternative control period, the industry index is composed of 49 of the 52 companies included in Ms. Nettesheim's index (due to price data availability).

different results. We found that the explanatory power of her regression declined from 77% to 37%. That is, her industry index was not nearly as successful in explaining Halliburton's stock price movement over a period where she had not "cherry-picked" the companies based on their statistical results over the same period.

More importantly, this change shows that her results are not robust. Applying the regression results based on this alternative control period, we found that there was no longer any statistically significant price decline on most of Ms. Nettesheim's alleged curative disclosure dates. We find that 9 of her 11 alleged curative disclosure dates are not statistically significant if we apply her methodology and simply change the control period from being a one-year period that starts before the alleged class period to a one-year period that starts after the alleged class period.[18]

F. Nettesheim's determination of what is news and the date on which news is released is not systematic or replicable

In her report, Ms. Nettesheim does not detail any systematic way to distinguish between the days she considers news days and those that she considers non-news days. Ms. Nettesheim indicates that on 9 dates out the 31 on which she finds statistically significant price movements

18. The price reactions on following dates (alleged curative disclosures according to Ms. Nettesheim) are not statistically significant: January 5, 2000, October 25, 2000, December 22, 2000, June 29, 2001, August 9, 2001, October 31, 2001, November 1, 2001, December 4, 2001 and December 5, 2001.

there is no company-specific news that explains that price movement.[19] Yet, she does list news stories in her Exhibit 18 for those days. Ms Nettesheim does not provide any justification or method for her determination that those published reports could not explain the price movement on those days. Her judgment cannot be replicated.

Further, Ms. Nettesheim inconsistently attributes the price reaction on some days to news on other days. For example, she has justified her inclusion of the price reaction on December 22, 2000 by referencing news released in the morning of the previous trading day, December 21, 2000. And while Ms. Nettesheim attempts to justify the inclusion of the price reaction on October 31, 2001 by referencing news that she claims was released after market close on October 30, 2001, this news had been released at least as early as October 28, 2001.

VIII. NETTESHEIM DOES NOT PROVE LOSS CAUSATION FOR THE ALLEGATIONS REGARDING THE INTEGRATION OF DRESSER

Ms. Nettesheim's analysis does not prove loss causation for the allegations regarding the integration of Dresser. Plaintiffs allegation regarding the integration of Dresser is that "severe but undisclosed problems associated with the acquisition and integration of Dresser" inflated

---

19. Nettesheim Report, ¶43, 44. The dates in question are: June 18, 1999, October 15, 1999, February 10, 2000, February 25, 2000, May 19, 2000, October 24, 2000, December 18, 2000, February 12, 2001 and November 6, 2001.

Halliburton's stock price.[20] Ms. Nettesheim has not shown that the "severe but undisclosed problems" associated with the Dresser merger inflated Halliburton's stock price or that there was a stock price decline at the time of a curative disclosure of this alleged misrepresentation. In fact, she has not even identified any actual curative disclosures of the alleged misrepresentations regarding the Dresser merger.

A. The Nettesheim Report inappropriately combines the allegations regarding the integration of Dresser with the allegations regarding the unapproved claims

Ms. Nettesheim, rather than analyzing the actual allegations, has lumped together the integration of Dresser allegations with the allegations regarding unapproved claims and interpreted them as anything that relates to the Engineering and Construction business unit ("E&C"), one of Halliburton's two major business segments (the other being Energy Services, or "ES"). The integration of Dresser and the unapproved claims allegations are in fact distinct, and a finding that one set of allegations materially inflated the stock price and was the cause of a loss does not imply loss causation for the other category of allegations. The unapproved claims relate to an allegedly "insidious accounting trick[21] while the integration allegations relate to allegedly severe but undisclosed problems associated with the acquisition

20. Plaintiff's Motion, p. 3.

21. Complaint, ¶13.

and integration of Dresser. The Complaint, for example, alleges that the accounting for unapproved claims affected both parts of Halliburton's business, E&C and ES, and "falsely inflated Halliburton's Energy Services ('ES') and Engineering and Construction ('E&C') Groups' reported operating incomes."[22]

B. Nettesheim does not establish causation for the Dresser integration allegations, but rather looks at whether stock price declines relate to E&C

Ms. Nettesheim finds that a curative disclosure is any negative news that relates to E&C, rather than information that in fact corrects alleged misrepresentations. For example, she testified as follows regarding her conclusion that October 25, 2000 was a curative disclosure of the allegations related to unapproved claims and the integration of Dresser:

> Well, I think the analysts are attributing -- there is a real valuation of the company downward, and they are attributing the re-evaluation, the downward portion of the re-evaluation, to the engineering and construction side of the business. [Nettesheim Deposition, p. 70]

Moreover, Ms. Nettesheim does not test whether the allegations related to the Dresser integration caused any losses. It is our understanding that the Court requires Plaintiff to show not only that the alleged misstatement

22. Complaint, ¶13.

was material and moved the stock price, but also that the subsequent revelation of the relevant truth caused a loss.[23] Furthermore, we understand that, according to Dura, "to touch upon a loss is not to *cause* a loss."[24]

In her report, Ms. Nettesheim does not test whether correction of the actual alleged misrepresentation or omission was the cause of a price decline; rather, she starts with a list of "significant" price declines and looks to see whether information related to E&C (for this category of allegations, and asbestos for her other category of allegations) is announced around the date of the price decline.

C. The alleged curative disclosures are not curative of alleged misrepresentations

Ms. Nettesheim does not describe how her alleged curative disclosures are, in fact, curative of the alleged misrepresentations in this case. Not only is there no proven link in her report or analysis between the alleged misrepresentations and the curative disclosures, but Ms. Nettesheim never attempted to make such a link, apparently not considering this a necessary step in loss

---

23. *Oscar Private Equity Invesments v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. May 16, 2007): "We require proof that the misstatement actually moved the market" . . . "When multiple negative items are announced contemporaneously, mere proximity between the announcement and the stock loss is insufficient to establish loss causation." [p. 7, 21]

24. *Dura Pharmaceuticals, Inc. et al. v. Broudo, et al.*, 544 U.S. 336 (2005).

causation analysis. In her deposition, she testified as follows:

> Q. And the reason why, as part of your loss causation analysis, is you're looking at prior statements by the company or officers of the company to identify that the corrective statements that are being identified in your report relates back to a prior statement that was not accurate; is that correct?
>
> A. Well, as I said earlier, I did not link or match up statement by statement earlier statements with the partial disclosures I discussed. [Nettesheim Deposition, pp. 164-165]

Indeed, we are unable to determine, for example, which "severe but undisclosed problems associated with the acquisition and integration of Dresser" were revealed on the alleged disclosure dates. Ms. Nettesheim opines that negative information related to Halliburton's E&C segment is discussed on these dates. We find, however, that negative information related to Halliburton's E&C segment is similarly discussed on other dates during the alleged class period that are not associated by Ms. Nettesheim with the alleged fraud.

For example, on July 26, 2001, a date which Ms. Nettesheim lists as having a positive statistically significant company-specific return,[25] there is negative

25. Nettesheim Report, ¶45.

news announced relating to the E&C business of Halliburton:[26]

> By contrast, Halliburton's engineering and construction unit had operating profit of $25 million, down from $30 million last year, and revenue fell to $1.1 billion from $1.3 billion.

According to Johnson Rice & Company following the announcement that day:

> Engineering & Construction . . . operating income of $25 million was below our $32 million estimate. [Johnson Rice & Company L.L.C, July 26, 2001]

Similarly, on July 27, 2000, a date which Ms. Nettesheim lists as having a positive excess return,[27] there is negative news announced relating to the E&C business of Halliburton:[28]

> Halliburton Co., the world's biggest oilfield services company, said on Wednesday second-quarter earnings fell almost 10 percent as a 13 percent increase in energy services revenues was offset by a 29 percent decline in engineering

---

26. The Wall Street Journal, July 26, 2001, "Results Are Strong At Halliburton Co. and Schlumberger."

27. Nettesheim Report, Exhibit 17.

28. Reuters News, July 26, 2000 (after market close), "Halliburton earnings fall as engineering lags."

> and construction revenues . . . Operating income at the Engineering and Construction division fell 44 percent to $36 million.

According to Salomon Smith Barney following the announcement that day:

> The E&C Group reported revenues of just $971 million versus our $1, 135 million forecast, representing a 14% shortfall versus our expectations. [Salomon Smith Barney, July 26, 2000]

No systematic method has been applied by Ms. Nettesheim to determine whether news is an alleged curative disclosure or of which alleged misrepresentation this news is curative. In fact, Ms. Nettesheim has identified allegedly curative disclosures that were not identified in the Complaint. She does not describe how she determined which dates are curative, nor can we find any systematic approach that would yield the set of alleged curative disclosures she has identified.

D. Nettesheim does not properly analyze or control for the E&C industry

Ms. Nettesheim allegedly tests whether the stock price declines are related to the E&C segment. As discussed above, this is not the appropriate test of loss causation for the alleged misrepresentations. Nor is her methodology an appropriate test of whether Halliburton's stock price decline is due to company-specific problems in the engineering and construction business.

Appendix C

Ms. Nettesheim mistakenly claims that, if her industry index does not explain Halliburton's stock price movement on a given date, then any negative news related to Halliburton's E&C segment must be a company-specific problem.[29] Her industry index, however, was not designed to test this hypothesis, as her selection criteria are not based on companies having a substantial E&C segment. The Industry index is composed of 52 companies.

Of the 4 E&C companies detailed in a Merrill Lynch Engineering & Construction industry report analyzing the Halliburton/Dresser merger,[30] only one company, McDermott International, Inc., was included in Ms. Nettesheim's 52-company industry index.

We examined the stock price of Halliburton from the beginning of the alleged class period through Ms. Nettesheim's four alleged curative disclosures related to E&C. We found that, over this period (June 3, 1999 through December 22, 2000), Halliburton's stock price declined 13.25%. We created an index of the stock prices of the E&C companies detailed in the Merrill Lynch industry report, and compared the performance of this E&C index to Halliburton.[31] As can be seen in the graph below, we

---

29. Nettesheim Report, ¶88-92.

30. Merrill Lynch report dated March 13, 1998.

31. The index is composed of McDermott International Inc., Foster Wheeler Ltd. and Jacobs Engineering Group Inc. Fluor Corp., although listed in the analyst report, was excluded because of a spin-off during the alleged class period. (As a check, we also

found that the E&C index underperformed Halliburton's stock from the beginning of the alleged class period through Ms. Nettesheim's alleged curative disclosures related to the E&C segment (ending December 22, 2000). While Halliburton's stock price declined 13.25%, the E&C peer companies declined 39.53%. This indicates that a decline in the E&C business over this time period was not a Halliburton-specific phenomenon.

It should be noted that merely changing Ms. Nettesheim's industry index to an E&C index and testing the same four dates that Ms. Nettesheim claims are

---

created the index including Fluor while excluding the company's returns of the day of the spin-off. The results are virtually the same.)

alleged curative disclosures would not be a sufficient test of loss causation. The alleged curative disclosures are not the only days on which news regarding E&C issues is released to the market and the allegations in this case are not synonymous with E&C. To analyze loss causation, an understanding of the specific alleged misrepresentations and a causal link to an actual curative disclosure of the alleged misrepresentations is necessary. In addition, one would need to, at a minimum, parse the effect of other potentially confounding news that may be released to the market at the same time.

E. Nettesheim mischaracterizes the underperformance of E&C as due to unrealized benefits from the Dresser merger

Ms. Nettesheim characterizes the underperformance of Halliburton's E&C business in 2000 as being due to unrealized benefits from the Dresser merger.[32] For example, she describes the October 24, 2000 alleged disclosure, in which the company announced the restructuring of the business, as "a partial disclosure concerning the Company's booking unapproved claims . . . and lack of benefits from the Dresser merger."[33]

However, in discussing the E&C segment's problems, analysts and other market participants did not mention any issues related to the merger. Instead, analysts cited

32. Nettesheim Report, p. 37.

33. Nettesheim Report, ¶93.

concerns not about "operational problems," but with unanticipated, cyclical and ongoing industry conditions.

For example, according to an A.G. Edwards & Sons, Inc. report dated October 25, 2000:

> Lower activity levels at Kellogg Brown & Root's (KBR) downstream business continued to have a negative impact on revenues, as projects remain in the planning stage and capital spending remains depressed in the downstream business. In spite of a $6.1 billion backlog at E&C (up from $5.5 billion at the end of 2Q 2000), **the operating environment remains weak** and revenues are expected to decline in 2001. Although maintenance has picked up, large projects continued to be delayed and **consolidation among the major oil companies may cause additional delays.** [Emphasis added]

In a CIBC World Markets report dated October 25, 2000, the analyst notes that:

> **This business is at the trough of its cycle** and there is little work that can be secured in 4Q00 that would begin to impact earnings before 2002. Thus, this business will have to live off its backlog which currently is slightly over $6 billion. We estimate it will complete about half that backlog next year, but at sharply reduced profit margins due to the present overhead

> designed to support substantially more work than will be done. [Emphasis added]
>
> According to a Dain Rauscher Wessels report dated October 25, 2000:
>
> **Revenues were down 30% in the quarter and are not expected to recover until late in 2001 and into 2002.** New downstream construction has been hampered by **reduced spending by the majors following their recent mergers. The recently announced merger between Texaco and Chevron is likely to continue this trend."**[34] [Emphasis added]

An article published by *The Oil Daily* on October 26, 2000 quotes Simmons & Co.'s analyst Dan Pickering:

> "The problem is not with the front-end drilling business, which is performing well. The issue is that large oil companies have been relatively slow in making commitments to big development projects in the $1 billion to $2 billion range," Pickering said.

---

34. Since the completion of the merger between Halliburton and Dresser was announced on September 29, 1998, BP Plc acquired Amoco Corp. for $61.7 billion on December 31, 1998, Exxon Corp. acquired Mobil Corp. for $85.2 billion on November 30, 1999, BP Plc acquired Atlantic Richfield for $33.1 billion on April 18, 2000, and Chevron Corp. acquired Texaco Inc. for $45.8 billion on October 9, 2001. Source: Bloomberg L.P. The Complaint does not allege that defendants should have anticipated this industry consolidation.

In some cases, he said mergers have distracted companies from moving forward with big developments that would require the sort of construction services offered by Halliburton.

In addition, oil companies are now more likely to evaluate and "pre-engineer" complex projects for a longer period of time, having been burned by cost overruns from rushing forward with such projects in recent years.

From this perspective, Halliburton is not being punished for poor execution from its engineering and construction unit, but rather for its unfortunate exposure to a currently weak market, Pickering said. [Emphasis added]

Similarly, according to a December 22, 2000 CIBC World Markets research report:

Despite the rise in oil and natural gas prices, HAL has experienced weak performance in its shallow-water marine construction and downstream E&C businesses. The customer base for E&C is consolidating and financially pressured competitors have intensified competition and pricing in the marketplace. As a result, HAL is restructuring its company into two operating segments: the Halliburton Energy Services Group and the Engineering and Construction Group. About $25 million of the $120 million restructuring charge will be

associated with reorganization costs related to severance and facility closures.

The fact that analysts attributed the Engineering & Construction segment's difficulties not to any failure to achieve the benefits of the merger with Dresser, but to industry conditions that were unanticipated at the time of the merger and were of unknown duration demonstrates that the disclosure of these problems is unrelated to the alleged fraud, and, as such, caused no losses.

F. There was non-culpable news released on the dates of the alleged curative disclosures related to the integration of Dresser

According to Plaintiff's Motion, "the *Allegiance* court found that, where there are multiple negatives, not all of which are alleged to be culpable, the Lead Plaintiff has the burden of showing that it was the culpable statement(s) that caused a significant amount of the decline in the stock price ... "[35]

Also according to Plaintiff's Motion, Ms. Nettesheim found that "eleven days corresponded to the release of culpable news, and only one of those days involved multiple pieces of news, some culpable and some not."[36]

However, a review of information released on each of Ms. Nettesheim's four alleged curative disclosure dates

35. Plaintiff's Motion, p. 20.

36. Plaintiffs' Motion for Class Certification, p. 21.

regarding the integration of Dresser shows that there was non-culpable news released on each of them.

1. There was non-culpable news released on October 5, 1999

According to Ms. Nettesheim, the stock price decline on October 5, 1999 was due to a warning from Halliburton that its 3Q 1999 earnings would be lower than expected, and that "the Company attributed the reduction, in large part, to the lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group."[37]

The analyst reports on which she relies following this announcement, however, are not consistent with the claim that the decline is entirely, or even in large part, due to allegedly culpable information. For example, the analyst at CIBC World Markets stated that the decline in 3Q 1999 expectations was "mostly due to the slower than expected recovery in oilfield activity this summer in the U.S. and the continuing decline in activity internationally."[38] Thus, the analyst attributed Halliburton's 3Q 1999 weakness to industry issues and not the alleged culpable misstatements.

Furthermore, the same analyst report stated that the weakness in 3Q 1999 earnings was not confined to the business units of the Dresser Equipment Group, as Ms. Nettesheim claims. Instead, the analyst found that

---

37. Nettesheim Report, ¶84.

38. See, CIBC World Markets, October 5, 1999.

there was weakness in virtually all areas of the business and further found that the reported weakness was not surprising given the experience of other companies in the industry:

> It also announced that weakness in virtually all areas of its business would result in 3Q EPS declining to between $0.11 to $0.13 vs. current consensus expectations of $0.19 and our estimate of 0.18. [...] The company's announcement of weakness across virtually every business line in 3Q is not surprising, given the slower than anticipated oilfield industry recovery. [CIBC World Markets, October 5, 1999]

Although it is not clear why Ms. Nettesheim considers Halliburton's announcement of the sale of its interest in the joint ventures to be a partial curative disclosure of culpable information, it does not even appear to have been the reason for the stock price decline on October 5, 1999. Analyst commentary suggests that the market considered the sale to be *positive* news.[39]

---

39. Note that, although analysts revised earnings expectations downward in part because of the sale of the joint ventures, this was not negative news about the company. Naturally, if the joint venture was expected to generate any future earnings for Halliburton, the sale of the joint venture would eliminate those expected earnings. Merrill Lynch, on the date of this alleged curative disclosure, reduced its future earnings estimates fur 2000 and explained the reduction as follows: "About half the cut reflects elimination of the JV earnings sooner than we expected and the rest reflects reduced expectations for overseas oilfield results." [Merrill Lynch, October 5, 1999]

Appendix C

Late yesterday afternoon, HAL announced both positive and negative developments. The positive is that HAL will sell its JV interests in Dresser-Rand IR Dresser Pump to Ingersoll-Rand for $1.1 billion (pretax). [Merrill Lynch, October 5, 1999]

2. There was non-culpable news released on January 5, 2000

Ms. Nettesheim admits that non-culpable news was released on January 5, 2000.[40] She nonetheless states that having reviewed all the news and analyst reports, she does not see news or information that can explain Halliburton's price decline on January 5 other than the reductions in earnings estimates made by two analysts (Carol Lau with Brown Brothers Harriman & Co. and K. Simpson of Merrill Lynch). She claims that, "The reductions in earnings estimates are based at least in part on the problems with the large fixed-price contracts and the lack of benefits from the Dresser merger."[41] She states that the Merrill Lynch analyst reduced his estimates for three reasons -(1) "reduced expectations for offshore construction results"; (2) "a reduced growth estimate for oilfield spending outside North America" and (3) "less powerful synergies from the Dresser merger than [h]e had envisioned.[42]

---

40. Nettesheim Report, ¶ 88.

41. Nettesheim Report, ¶ 92.

42. Nettesheim Report, ¶ 89.

Appendix C

Ms. Nettesheim claims that reason 1 (reduced expectations for offshore construction results) represents culpable news. Yet, the Merrill Lynch analyst explains the causes for reason 1 as follows:

> The North Sea likely will be very weak in 2000 and this has historically been a stronghold for HAL. Also, awards of major deepwater development projects continue to be delayed. While HAL should benefit from stronger deepwater earnings in 2001, the biggest positive impact on results may not be until 2002. Our reductions in offshore construction are in line with recent estimate cuts for Cal Dive and Coflexip by our oil service colleague Kurt Hallead. Recall that neither Schlumberger nor Baker Hughes, HAL's full-service oilfield competitors, have exposure to the offshore construction business. [Merrill Lynch, January 5, 2000]

The causes for reason 1 (the reduced expectations for offshore construction results) appear to bear no relationship to the alleged "improper booking of unapproved claims" and "severe but undisclosed problems associated with the acquisition and integration of Dresser." The analyst is projecting weak future business from projects in the North Sea, a delay regarding deepwater development projects and reductions in offshore construction that are in line with competitors.

Ms. Nettesheim admits that reason 2 (a reduced growth estimate for oilfield spending outside North

America) is non-culpable but claims that the price decline on January 5, 2000 is unlikely to have been caused by it. The logic behind this reasoning is not sound. If the price decline is due to the reduction in the analysts' estimates, and if a key factor driving the reduction, according to the analyst, is reduced oilfield spending, then Ms. Nettesheim's claim is self-contradictory.

3. There was non-culpable news released on October 25, 2000

According to Ms. Nettesheim, on October 25, 2000, Halliburton "disclosed that it would be restructuring its engineering and construction units, causing a statistically significant decline on October 25."[43] She claims that, "The price decline on October 25, 2000, was caused by revelations related to operational problems at the engineering and construction units and, to a lesser extent, some analysts' concerns regarding potential asbestos exposure."[44]

According to Plaintiff's Motion, although multiple pieces of negative information were announced on October 25, all of these pieces are alleged to be culpable.[45] The Motion also claims that, although "not required by *Allegiance*, Nettesheim has opined on the significance of each piece of news" associated with the price decline "utilizing the event study, and an empirical analysis."[46]

---

43. Nettesheim Report, ¶ 93.

44. Nettesheim Report, ¶ 93.

45. Plaintiff's Motion, p. 21.

46. Plaintiff's Motion, p. 22.

Appendix C

The only analysis in which Ms. Nettesheim attempted to parse the reasons for the October 25, 2000 stock price decline is a calculation of the percent of the change in analysts' estimates of 2001 operating income that is attributed to E&C versus the rest of Halliburton. In particular, Ms. Nettesheim lists three analyst reports released around October 25, 2000 that provided estimates of expected 2001 operating income for Halliburton's major business segments. She calculates, for each report, the change in estimated operating income for E&C divided by the total change. She finds that the E&C portion ranged (for the three analysts) from 50% to 80% and appears to conclude, without any other analysis, that "The price decline on October 25, 2000, was caused by revelations related to operational problems at the engineering and construction units and, to a lesser extent, some analysts' concerns regarding potential asbestos exposure."[47]

There was non-culpable news released on the day of Ms. Nettesheim's alleged October 25, 2000 curative disclosure. For example, the Dain Rauscher Wessels analyst commented on the weaker than expected international market for the Energy Service Group (ESG) as follows:

> We were also concerned that the expected increase in revenues from international markets continues to be weaker than expected. In the ESG, international revenues were flat sequentially and accounted for only 64% of the total revenue. International activity has been

47. Nettesheim Report, ¶ 93

> slowed by decreased spending by the majors, a trend that does not appear likely to reverse until 2001 at the earliest. [Dain Rauscher Wessels, October 25, 2000]

Plaintiff has not shown that this information should have been known at the beginning of the alleged class period, or that it is related to the allegations regarding the integration of Dresser.

4. There was non-culpable news released on December 22, 2000

With regard to Halliburton's stock price movement on December 22, 2000, Ms. Nettesheim claims:[48]

> Halliburton's stock price reaction that day is consistent with the charge for cost overruns at various projects being a surprise and a concern to the market. I have reviewed all of the news and analysts reports available to me at this time from December 21 and 22, 2000, and find that the negative news and sentiment is predominately about the operational problems, delays and cost overruns for large construction projects. As there was no other negative news released that day, all of the price decline on December 22 was caused by the partial disclosures related to the operational problems at the engineering and construction units and is related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged by Lead Plaintiff.

---

48. Nettesheim Report, ¶ 112

The announcement on this day, however, included negative information regarding increased competitive pressure, and intensified competition in pricing and labor disturbances in Venezuela and West Africa. Plaintiff has not shown or alleged that this information should have been known at the beginning of the alleged class period, or that it is related to the allegations regarding the integration of Dresser. For example, according to CIBC World Markets:

> The customer base for E&C is consolidating and financially pressured competitors have intensified competition and pricing in the marketplace. As a result, HAL is restructuring its company into two operating segments ... Labor disturbances in Venezuela and West Africa caused significant costs to be incurred on several large fixed-fee E&C contracts ... General industry-wide issues are also impacting the E&C business. Despite high oil and natural gas prices, spending for engineering and construction projects remains depressed. The difficult operating environment has forced some of Halliburton's E&C competition to cut prices and increase competitiveness. [CIBC World Markets, December 22, 2000]

IX. NETTESHEIM DOES NOT PROVE LOSS CAUSATION FOR THE ALLEGATIONS REGARDING THE ACCOUNTING OF UNAPPROVED CLAIMS

Ms. Nettesheim does not prove loss causation for the allegations regarding the accounting of unapproved claims. Plaintiff alleges that, "Halliburton had secretly changed the way it was accounting for Unapproved Claims on construction contracts and was now recognizing them as revenue when the claims were asserted."[49] Further, they allege that, "By including the unapproved claims in the Company's reported revenue, profit and margins were more favorable than they would have been if the accounting policy had not been changed."[50]

Ms. Nettesheim testified that if there is a disclosure in any way related to fixed-price contracts, then she considered it related to the allegations regarding unapproved claims. In her deposition she testified as follows:

> Q. If there is a disclosure of bad news that in any way, shape or form relates to fixed price contracts, then it relates to the allegations about unapproved claims, correct?
>
> A. Yes, in this case I did. [Nettesheim Deposition, p. 181]

---

49. Complaint, ¶ 42d.

50. Plaintiff's Motion, p. 5.

Appendix C

An announcement of information that could have some connection to an alleged misrepresentation is not proof of loss causation. Clearly, not all information related to fixed-price contracts is necessarily related to Plaintiff's allegations regarding booking of unapproved claims.

According to the Court in *Zonagen*, "The accurate information causing the decrease must be related to the false information causing the increase. Otherwise, measuring the price effect that the positive statements had by measuring the price decrease after publication of negative statements would be an exercise in pure speculation."[51]

A. The alleged curative disclosures are not curative of alleged misrepresentations regarding the booking of unapproved claims

Ms. Nettesheim appears to find that the same four dates that were allegedly curative of the Dresser integration allegations are also allegedly curative of the unapproved claims allegations.

> The following events [October 5, 1999, January 5, 2000, October 25, 2000 and December 22, 2000] are examples of information disclosed during the Class Period that brought, in part, investors' perceptions of the Company's financial condition related to its booking of

51. *In re Zonagen, Inc. Securities Litigation*, 322 F.Supp.2d 764, S.D.Tex., June 13, 2003 (NO. CIV.A H-98-0693), pp.21-22.

> unapproved claims on fixed-price contracts and the benefits from the Dresser merger more in-line with its alleged true condition at that time.[52]

We find that on none of these alleged curative disclosures dates were the alleged misrepresentations regarding unapproved claims revealed.

October 5, 1999:

Although Ms. Nettesheim claims that October 5, 1999 was a curative disclosure of both the allegations regarding unapproved claims and the integration of Dresser, her discussion of this date includes no mention of the unapproved claims allegations.

According to Ms. Nettesheim, the stock price decline on October 5, 1999 is due to a warning from Halliburton that its 3Q 1999 earnings would be lower than expected, and that, "The Company attributed the reduction, in large part, to the lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group."[53]

We find no evidence that October 5, 1999 was a curative disclosure of the unapproved claims allegation.

January 5, 2000

---

52. Nettesheim Report, ¶ 83.

53. Nettesheim Report, ¶ 84.

Appendix C

Regarding January 5, 2000, Ms. Nettesheim claims:[54]

> On Wednesday, January 5, 2000, Halliburton made a partial disclosure related to the Company's booking of unapproved claims on fixed-price contracts and the lack of benefits realized from the Dresser merger as revealed in a conversation with analyst Carol Lau with Brown Brothers Harriman & Co.
>
> Carol Lau's report is attached as Attachment B.[55] According to this report:
>
> Following a conversation with the company this morning, we are reducing our fourth quarter 1999 and 2000 EPS estimates. For the fourth quarter, we are trimming our estimate ... to reflect lower oilfield services profits. [...] For 2000, we are reducing our EPS projection...as we are now electing to use more conservative forecasts to reflect the lower base point in the fourth quarter for Energy Services and lower profit expectations in Engineering & Construction. [Brown Brothers Harriman & Co., January 5, 2000]

---

54. Nettesheim Report, ¶ 88.

55. Carol Lau issued a research note on the same date, but that also contains no other information regarding unapproved claims.

Carol Lau's report on that day reveals absolutely no information regarding the booking of unapproved claims on fixed-price contracts.[56]

October 25, 2000

With regard to October 25, 2000, Ms. Nettesheim states:[57]

> After market close on October 24, 2000, while announcing its third quarter earnings release, the Company made a partial disclosure concerning the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger .... A significant portion of the negative news, as attributed to the Company, in news reports and by analysts, was related to the problems with the engineering and construction units that Lead Plaintiff alleges could have been and should have been revealed earlier. Thus, a significant portion of the stock price decline on October 25, 2000 was related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged in the Complaint.

---

56. We can find no indication in the Nettesheim Report or any of the materials referenced by Ms. Nettesheim, what was revealed by Halliburton to Carol Lau in the referenced conversation.

57. Nettesheim Report, ¶ 93.

Ms. Nettesheim's logic is flawed Ms. Nettesheim claims that if she finds that a price decline is .related to E&C, then it is a curative disclosure of the company's booking of unapproved claims. There is no basis for her conclusion that E&C, a major segment of Halliburton's business, is synonymous with the allegations regarding unapproved claims. We found no evidence of a curative disclosure of the allegations regarding the booking of unapproved claims on October 25, 2000.

December 22, 2000

With regard to December 22, 2000, Ms. Nettesheim states:[58]

> The charges for cost overruns that were announced in December 2000 make clear that the problems in the engineering and construction were related to the large, fixed-price contracts and, therefore, the negative news on October 24 and 25, 2000, is a partial disclosure related to the Company's booking unapproved claims on fixed-price contracts and the lack of benefits from the Dresser merger alleged in the Complaint.

Ms. Nettesheim claims that if a price decline is related to large fixed-price contracts, then it is a curative disclosure of the allegations regarding booking of unapproved claims. This is another instance where she

---

58. Nettesheim Report, fn. 61.

inappropriately equates two issues that are not at all synonymous. Ms. Nettesheim's analysis only makes sense under the premise that there are no possible problems that can occur with fixed-price contracts other than those related to the booking of unapproved claims. This premise is false, however, because problems with fixed-price contracts can occur independent of how unapproved claims are booked.

Further, while analysts in fact discuss cost overruns, they attribute these overruns to changes in market conditions, specifically to labor disturbances in Venezuela and West Africa. Plaintiff made no allegations about these labor disturbances or how Halliburton could have known about them at the beginning of the alleged class period and failed to disclose them.

> **What's Going Wrong?** Although the E&C division was weak in the first half of 2000, we were surprised by management's earnings warning on the 3Q conference call. There were concerns that HAL might not have the critical mass to generate consistent and predictable profitability in the E&C business. Labor disturbances in Venezuela and West Africa caused significant costs to be incurred on several large fixed-fee E&C contracts. HAL has submitted claims on these costs to clients, but HAL does not believe that all the costs will be recovered. Additionally, relationships with some customers have deteriorated and the cost increase claims on seven other projects have not

> resolved as expected. General industry-wide issues are also impacting the E&C business. Despite high oil and natural gas prices, spending for engineering and construction projects remains depressed. The difficult operating environment has forced some of Halliburton's E&C competition to cut prices and increase competitiveness. [CIBC World Markets, December 22, 2000]

B. Risks of cost overruns connected to fixed-price contracts were known by the market before the alleged curative disclosures

Although some of the disclosures alleged by Ms. Nettesheim as being curative relate to fixed-price contracts, we find no indication that they relate to the accounting issue of booking unapproved claims as revenue. The fact that fixed-price contracts were at risk of cost overruns was known by the market even before the beginning of the alleged class period.

> The company will be undertaking large, lump sum fixed price contracts. The potential for cost overruns, and lower earnings from some of this work, will be an ever-present risk. [Prudential Securities, April 7, 1998]

> Engineering and construction is an inherently risky business, as any number of problems can arise when transforming a project idea into a physical reality .... The segment also began

> accepting a greater level of project risk by offering gain sharing or fixed price contracts. [Robinson-Humphrey, October 3, 1998]
>
> The company will be undertaking large, lump-sum fixed-price contracts. The potential for cost overruns is an inherent risk of those businesses. [Prudential Securities, October 7, 1998]

C. Nettesheim's event study analysis shows that there was no statistically significant price reaction to the actual disclosure of the change in accounting for unapproved claims

The four alleged disclosures that Ms. Nettesheim claims are curative of the allegations regarding unapproved claims are not, in fact, curative of the allegations. There is, however, an actual curative disclosure of the accounting of unapproved claims.

On March 14, 2000, the change in Halliburton's accounting practices relating to the booking of revenues related to claims and change orders was disclosed to the market in the company's Form 10-K. This filing included the amounts booked as revenue for claims and change orders for 1998 and 1999.

The Complaint alleges that March 14, 2000 was a partial curative disclosure. Ms. Nettesheim should have used an event study analysis to test the stock price reaction on this date rather than on the four dates on which no curative information is released. While her report does not specifically address this date, Ms. Nettesheim's

event study analysis found no statistically significant price reaction on March 14, 2000, an actual curative disclosure of the unapproved claims allegations.

X. NETTESHEIM DOES NOT PROVE LOSS CAUSATION FOR THE ASBESTOS RESERVES ALLEGATIONS

Ms. Nettesheim does not prove loss causation for the allegations relating to asbestos reserves. She does not show that the allegations inflated Halliburton's stock price or that there was a stock price decline due to a curative disclosure of the allegations. Her statistical results are invalid, as discussed above. She does not link the alleged misrepresentations regarding asbestos reserves to curative disclosures.

A. Nettesheim fails to link the alleged misrepresentations to curative disclosures

1. Nettesheim's loss causation analysis is not based on an understanding of Plaintiff's allegations

Ms. Nettesheim's loss causation analysis does not take into account the specifics of the allegations regarding asbestos reserves. Plaintiff alleges that the asbestos reserves were misleading, and Ms. Nettesheim claims to determine whether dates during the alleged class period were curative of this allegedly misleading information. According to Ms. Nettesheim, however, she does not have an understanding of how Halliburton's asbestos reserves

were estimated, nor how the market perceived how the estimation was made.

> Q. Let me ask it this way: You understood, did you not, that throughout the class period, or at no time during the class period did Halliburton suggest to the marketplace that its current asbestos reserve was intended to apply to whatever future exposure the company had to asbestos, no matter how far down the road?
> A. As I said earlier, I don't have a specific -I didn't think of it in that way. [Nettesheim Deposition, pp. 115-116]

> Q. You don't recall seeing the company's description of the asbestos reserves and its methodology for it?
> A. I recall looking at it generally, but that wasn't something I was looking at specifically so I don't recall specifically what was said.

> Q. And would you agree with me that all of the analysts who were following Halliburton whose reports you saw at least understood that Halliburton was reserving only for pending or open asbestos claims as opposed to whatever the future universe of asbestos claims may be?
> A. You would have to show me the specific analyst reports. [Nettesheim Deposition, pp. 116-117]

Appendix C

Without an understanding of what Plaintiff alleges the misrepresentations regarding the asbestos reserves are, what the asbestos reserves represented, and what the market believed the reserves represented, Ms. Nettesheim cannot reliably test whether an announcement about asbestos was a curative disclosure of the alleged misrepresentations regarding asbestos reserves.

2. The alleged curative disclosures are not curative of alleged misrepresentations regarding asbestos reserves

Plaintiff alleges that Halliburton misled investors about the adequacy of its reserves for pending asbestos claims.[59] Ms. Nettesheim provides no evidence or analysis to prove that any of the dates alleged as partial curative disclosures in the Complaint or in her report are actually curative of Plaintiff's allegations regarding asbestos reserves. Ms. Nettesheim supports her claim of loss causation for the allegations regarding asbestos reserves by listing market commentary generally related to Halliburton's or Dresser's asbestos liability on or about the dates of significant price declines. She provides no evidence that the movement of Halliburton's stock price on those dates is caused by news about reserves for pending asbestos claims, as per Plaintiff's allegations.

Halliburton's reserves were calculated based on pending claims, and did not include estimates of future claims. According to Halliburton's 1999 Form 10-K:

---

59. Plaintiff's Motion (p. 6) quotes Halliburton's statements about reserves for pending claims.

Appendix C

> We have established a reserve estimating our liability for asbestos claims. Our estimate is based on our historical litigation experience, settlements and expected recoveries from insurance carriers .... At the end of 1999, there were about 107,650 open claims, including 19,000 for which settlements are pending. This compares with 70,500 open claims at the end of 1998. The accrued liabilities for these claims and corresponding receivables from carriers were as follows:
>
> [Table omitted]
>
> We recognize the uncertainties of litigation and the possibility that a series of adverse court rulings could materially impact the expected resolution of asbestos related claims. However, based upon our historical experience with similar claims, the time elapsed since Dresser and its former divisions or subsidiaries discontinued sale of products containing asbestos, and our understanding of the facts and circumstances that gave rise to such claims, we believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations.

Ms. Nettesheim admits that in her mind it was sufficient that a news release was related to asbestos for her to claim that that news release was a partial curative disclosure.

Q. So in your mind, this news release on June 28, 2001, was that a partial disclosure of , or is it, again, all of the company's prior statements about asbestos?

A. It relates to the allegations regarding the under reserving of the asbestos reliability [sic].

Q. How does it relate?

A. It is talking about asbestos claims and the potential asbestos liability of Halliburton.

Q. And that's a sufficient link in your mind?

A. Yes. [Nettesheim Deposition, p. 124]

Ms. Nettesheim alleges seven partial curative disclosures of the alleged misstatements related to asbestos reserves, several of which are not referenced in the Complaint:

- June 29, 2001 (alleged in Complaint as June 28, 2001 and Nettesheim Report);
- August 9, 2001 (alleged in Nettesheim Report);
- October 31, 2001 (alleged in Nettesheim Report);
- November 1, 2001 (alleged in Nettesheim Report);

- December 4, 2001 (alleged in Nettesheim Report for the date and Complaint referencing the "beginning of December");

- December 5, 2004 (alleged in Nettesheim Report for the date and Complaint referencing the "beginning of December"); and

- December 7, 2001 (alleged in Complaint and Nettesheim Report).

According to Ms. Nettesheim, the information disclosed on each of these alleged curative disclosures was as follows:[60]

- June 29, 2001: "Halliburton announced that a former subsidiary of Dresser, Harbison-Walker ('Harbison'), had been requesting the Company's financial assistance with asbestos claims Harbison agreed to assume in 1992 after it was spun off from Dresser. Certain analysts expressed concern over the Company's potential exposure to asbestos liability."

- August 9, 2001: "Halliburton filed Form 10-Q with the SEC, in which it increased its accrued net liability for known open asbestos claims to $124 million (from $30

60. Nettesheim Report, ¶ 45.

million on March 31, 2001, and $29 million on Dec. 31, 2000). Certain analysts responded that the situation was now more complex and uncertainty was increased."

- October 31, 2001: "A jury in Mississippi found Dresser (through Harbison) liable in two of six asbestos cases for total compensatory damages of $21.3 million. One analyst was surprised by the size of the award."

- November 1, 2001: Ms. Nettesheim states that there is no company-specific news released on this day. She alleges that the price decline may reflect further concern related to the October 31, 2001 news.

- December 4, 2001: "A Texas District Court had entered a judgment against Dresser on a $65 million jury verdict rendered in September 2001. The same district court also entered three additional judgments against Dresser in favor of 100 other asbestos plaintiffs in the aggregate amount of $35.7 million related to an alleged breach of a purported settlement agreement."

- December 5, 2004: Ms. Nettesheim states that there is no company-specific news released on this day. She alleges that the price decline may reflect further concern related to the December 4, 2001 news.

- December 7, 2001: "A Maryland jury had

> awarded a $30 million verdict against Dresser in favor of five plaintiffs in an asbestos litigation. Several analysts issued reports that day in response; some downgraded ratings and lowered price targets citing mounting asbestos liabilities."

The information that Ms. Nettesheim alleges is released on each of these dates, although related to asbestos, is not curative of the alleged misrepresentations, and Ms. Nettesheim provides no further link other than that the general topic of the announcement is asbestos.

For example, on June 28, 2001, the first alleged curative disclosure regarding the asbestos reserves allegations, Halliburton announced that Harbison-Walker had requested Halliburton's financial assistance with asbestos claims.[61] There is no allegation in the Complaint, or in Ms. Nettesheim's report or testimony, that Halliburton knew or should have known prior to June 28, 2001 that Harbison-Walker would request financial assistance from Halliburton for its asbestos claims. Ms. Nettesheim testified as follows:

> Q. Is it your testimony that sometime --that prior to June 28th, 2001, Halliburton at some point said that Harbison will never request or need our assistance on any of the asbestos claims they agreed to assume back in 1992?

---

61. PR Newswire, June 28, 2001, 4:46PM, "Harbison-Walker Asks Halliburton for Assistance With Asbestos Claims."

A. No, that's not my testimony.

Q. Is it your testimony that this was -- this announcement, June 20th, 2001 [sic], was some announcement that Halliburton was required to make earlier than it did?

A. No, that's not my testimony.

Q. Is it your testimony that the request by Harbison for assistance on the asbestos claim that Harbison agreed to was something that should have been predicted by Halliburton and disclosed to the marketplace prior to June 28, 2001?

A. It's not something I examined so it's not my testimony. [Nettesheim Deposition, pp. 123-124]

The August 9, 2001 alleged curative disclosure occurs on the date on which Halliburton tried its 2Q 2001 Form 10-Q with the SEC, which disclosed, among many other things, an increase in the number of asbestos claims pending and an increase in reserves. However, nearly all of this increase was due to the inclusion of the Harbison-Walker claims, which is not an inclusion that would have been known at the beginning of the alleged class period. Moreover, the actual claim experience in 2Q 2001 was an increase in filings from prior quarters. In 2Q 2001, approximately 28,000 claims were filed, versus approximately 18,000 claims filed in 1Q 2001, and versus an average of approximately 11,000 claims filed per

quarter in 2000.[62] These 2Q 2001 claim filings were not in the estimated value of pending claims in prior periods and therefore their inclusion in the current reserve is not curative of the allegations that the value of prior pending claims was misleading.

The stock price declines on five of the alleged curative disclosure dates are all, according to Ms. Nettesheim, related to jury verdicts. These verdicts were considered surprising.

For example, on October 31, 2001, a jury in Lexington, Mississippi awarded compensatory damages of $150 million, a verdict that was unexpected.

According to A.G. Edwards:

> This jury award sets new precedents; the size of award is enormous and jury finding was based on shortness of breath and spots on the lung, not actual presence of asbestosis, a form of asbestos-related lung cancer.... Size of jury award was unexpected and is likely to have a negative impact on stock price tomorrow.... we believe that HAL's current stock price adequately discounts potential asbestos liability risk. [A.G. Edwards, October 31, 2001]

According to Salomon Smith Barney:

---

62. See, Halliburton's Form 10-Q filed May 11, 2001, p.9 and Form 10-Q filed August 9, 2001, p.10.

> We continue to monitor the situation closely and we recognize the unpredictability and apparent irrationality of the asbestos litigation environment in general. [Salomon Smith Barney, October 31, 2001]

There is no evidence presented by Ms. Nettesheim or Plaintiff of how Halliburton could have foreseen these verdicts at the beginning of the alleged class period.

3. There is no consistency in Nettesheim's choice of curative disclosure dates used to test loss causation for the asbestos reserves allegations

Not only does Ms. Nettesheim use the wrong criteria for selecting alleged curative disclosures (choosing dates when some information related to asbestos is released, rather than dates on which information curative of the alleged misrepresentations is released), she does not even consistently apply her own misguided criteria. There are dates where information related to asbestos is announced that Ms. Nettesheim does not consider curative disclosures. For example, on April 7, 2000 a Reuters News article stated:[63]

> Highlands Insurance Group Inc and a Texas unit have sued their former parent, Halliburton Co, demanding that Halliburton and its Brown

63. Reuters News, April 7, 2000, "Highlands Insurance sues Halliburton on asbestos claims."

& Root subsidiary cover "millions of dollars" in costs expected from 22,000 asbestos claims.

And on March 21, 2001, a Dow Jones News Service article stated:[64]

Highlands Insurance Group Inc. (HIC) said a Delaware chancery court ruled in its favor in a case against Halliburton Co. (HAL) regarding fixed-cost insurance policies.... Highlands issued fixed premium, guaranteed cost insurance policies to Brown & Root, a unit of Halliburton. Since the mid-1990;s, more than 20,000 third-party asbestos claims have been made against Halliburton, which alleged coverage under these policies, Highlands said.

B. Nettesheim fails to control for changes in the asbestos litigation environment

Ms. Nettesheim claims to have isolated the decline in Halliburton's stock price that is related to allegations regarding asbestos reserves. She claims to have done so by having performed an event study that uses a market index and an industry index. Yet, as mentioned above in Section VII.C, she has done nothing to include in her index companies with similar asbestos exposure to Halliburton. In fact, nothing about her procedure for selecting companies involves considering a company's asbestos exposure at all. Ms. Nettesheim testified:

---

64. Dow Jones News Service, March 21, 2001, "Highlands Insur Wins Judgment Vs Halliburton Co."

> Q. Did any of the companies in your index have any potential asbestos exposure?
>
> A. For these specific companies, I don't know.
>
> Q. That's not something that you or anybody on your team tried to ascertain?
>
> A. We relied on the indices, including them as comparables, and then analyst reports describing them as comparables. [Nettesheim Deposition, pp. 21-22]

Ms. Nettesheim has not properly parsed the effect of news related to the asbestos litigation environment in general from the effect of news specific to Halliburton's asbestos exposure.

C. The stock prices of other asbestos defendants reacted to Halliburton's alleged curative disclosure, indicating that the disclosure contained information other than about Plaintiff's allegations regarding asbestos reserves

Following the release of news of one of the verdicts against Halliburton, the stock prices of other asbestos defendants declined. This indicates that Halliburton's alleged curative disclosure contained information separate from Plaintiff's alleged misrepresentation about Halliburton's asbestos reserves.

Appendix C

According to a Reuters News article on December 10, 2001:[65]

E. On the day of one of the alleged curative disclosure, Moody's downgraded Halliburton for reasons separate from Plaintiff's allegations regarding asbestos reserves

On December 7, 2001, the date of one of Ms. Nettesheim's alleged disclosures regarding asbestos reserves, Moody's, a ratings agency, downgraded Halliburton's credit rating outlook. The reasons provided by Moody's for the downgrade were unrelated to Plaintiff's allegations. In particular, Moody's stated that the downgrade reflected concerns over uncertainty about the future of asbestos claims, and the inconsistencies in the size of judgments.

> Moody's confirmed the A1 senior unsecured debt ratings of Halliburton Company and changed the rating outlook from stable to negative. The change in rating outlook is in response to a series of recent adverse asbestos-related judgements [sic] against Halliburton and other plaintiffs [sic] and **reflects Moody's concerns about the uncertainty of future asbestos claims, the adequacy of U.S. tort laws to deal with such claims, and the**

65. Reuters News, December 10, 2001, "Anxious investors sell stock of asbestos defendants."

> **inconsistency in the size of the judgements** [sic]. In addition, Moody's believes recent bankruptcy filings have reduced the number of companies that law firms active in asbestos litigation can target, which could make law firms more aggressive in looking for plaintiffs against companies. [Moody's Investor Service Press Release, December 7, 2001]

Moody's downgrade of Halliburton's credit rating outlook is separate from Plaintiff's allegations regarding asbestos reserves. Ms. Nettesheim's analysis fails to account for the effect of this confounding news.

XI. THERE IS NO EVIDENCE IN NETTESHEIM'S EVENT STUDY THAT THE ALLEGED MISSTATEMENTS INFLATED HALLIBURTON'S STOCK PRICE

Plaintiff alleges that Halliburton made "a series of false and misleading statements that misrepresented the condition and success of Halliburton's business"[67] and that this resulted in "artificial inflation in Halliburton's stock price ... during the Class Period."[68] We reviewed the Complaint for all dates during the alleged class period on which Plaintiff alleges that misstatements were made and thereby allegedly inflated Halliburton's stock price.

---

67. Complaint, ¶ 2.

68. Complaint, ¶ 3.

Appendix C

We then reviewed Ms. Nettesheim's analysis to determine whether, according to her analysis, the alleged misstatement resulted in a statistically significant increase in Halliburton's stock price. As detailed in the table below, we find that, according to Ms. Nettesheim's event study analysis, on only two of 22 dates of alleged misstatements in the Complaint was there a statistically significant stock price increase.

Date	Alleged Misstatement in the Complaint	Alleged Relevant Allegations	Statistically Significant Price Increase According to Nettesheim
7/22/1999	Halliburton reported its 2ndQ 99 results ... Although these results continued to reflect adverse industry conditions, again the results were better than expected, which Cheney and Lesar told analysts was due to their superior management of Halliburton... [¶109]	All allegations	No
8/13/1999	Halliburton filed its 2Q 99 10-Q ... 'In our opinion, the condensed consolidated financial statements present fairly our financial position as of June 30, 1999 . . . [W]e continue to believe that provisions recorded are adequate to cover the estimated loss from asbestosis litigation.' [¶112,¶113]	All allegations	No

9/13/1999	Lesar said ... : 'Management originally targeted cost savings and related synergies from the Dresser merger totaling $250 million per annum, but following further headcount reductions and significant facility consolidations, the company is now projecting annual benefits of $500 million.' [¶115]	All allegations	No
10/21/1999	Halliburton reported its 3rdQ 99 results: '... Reduced worldwide spending by energy industry customers, which accounted for approximately 85 percent of Halliburton's 1998 revenues, was the principal factor in reduced ... income.' [¶117]	All allegations	No
11/15/1999	Halliburton filed its 3Q 99 10-Q ... '[T]he condensed consolidated financial statements present fairly our financial position as of September 30, 1999 ... [W]e continue to believe that provisions recorded are adequate to cover the estimated loss from asbestosis litigation. [¶118, ¶119]	All allegations	No

1/27/2000	Halliburton issued a release reporting its 4thQ 99 and full year results... "Halliburton's ... extensive worldwide operational infrastructure, ... position[s] it well for 2000 and beyond," said Dick Cheney. [¶120]	All allegations	No
3/14/2000	Halliburton issued its 99 Annual Report ... The report contained a letter from Cheney which stated: 'The merger with Dresser Industries is now behind us. Integrating the operations of the two companies ... [has] been an important part of our transition to the future .... The potential rewards to our shareholders are vast.' ... [T]he 99 Annual Report ... stated: '[W]e believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations.' [¶122, ¶126]	All allegations	No

4/26/2000	Halliburton reported its 1stQ 00 results ... The following was stated: 'Cheney: ... We see our stock as one of the best investment opportunities in the oil service industry .... [I]n the short-term, (Halliburton's construction operations) will continue to generate good profits as they work off existing projects. Now is a great time to be a Halliburton shareholder ... .' [¶129]	All allegations	No
5/15/2000	Halliburton filed its 1stQ 00 10-Q ... The 10-Q contained the same financial information as in Halliburton's 4/26/00 release ... [T]he 10-Q ... stated: '[W]e believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations ... [T]he condensed consolidated financial statements present fairly our financial position as of March 31, 2000 ... ' [¶130]	All allegations	No

7/26/2000	Halliburton held a conference call … During the call … 'Cheney: ... I have got every confidence that - Halliburton has a very bright future ahead of it. I think we have done a good deal over the last several years to strengthen the company .... Lesar: ... Clearly, Halliburton is well positioned ...' [¶132]	All allegations	No
8/10/2000	Halliburton filed its 2ndQ 00 10-Q ... The 10-Q ... represented: ' ... the condensed consolidated financial statements present fairly our financial position as of September 30, 2000' … [T]he 10-Q ... stated, "we believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations." On 9/6/00, Halliburton stock reached its Class Period high of $55.18 per share. [¶139]	All allegations	No

11/9/2000	Halliburton filed its 3rdQ 00 10-Q ... (The 3rdQ 00 10-Q ... represented: "[W]e believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations." [¶148]	Asbestos reserves	No
1/30/2001	Halliburton issued a release regarding its 4thQ 00 results, ... increasing the $120 million loss charge announced on 12/21/00 by $73 million to $193 million with $157 million being attributed to project losses. As a result, Halliburton suffered a 4thQ 00 loss of $21 million. [¶155]	Asbestos reserves	No
3/27/2001	Halliburton issued its 00 Annual Report ... [T]he 00 Annual Report ... stated: '[W]e believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations.' [¶158, ¶160]	Asbestos reserves	No

4/25/2001	Halliburton reported very strong 1stQ 01 results ... Lesar stated: ..., A few highlights from the ESG for the quarter include a 43% year over year growth in revenues for the group, operating income, which quadrupled year over year for the Energy Services Group, the highest we have seen since we have the merger with Dresser.' [¶161, ¶162]	Asbestos reserves	Yes
5/11/2001	Halliburton filed its 1stQ 01 10-Q ... [T]he 1stQ 01 10-Q ... again assured 'that the open asbestos claims asserted against us will be resolved without a material adverse effect on our financial position or results of operations. [¶166]	Asbestos reserves	No
6/28/2001	Halliburton, for the first time, disclosed that a former Dresser subsidiary had asked for asbestos claims management and financial assistance from Halliburton. [¶170]	Asbestos reserves	No

7/25/2001	Halliburton held a conference call for analysts and money managers ... : 'Lesar: ... Based on our analysis of Harbison's claims at this point in time and our concern that they may not be able to perform under their obligations, however, we thought it was prudent to accrue $60 million after-tax against the gain on the discontinued operations which, we believe, in our best judgment, is the potential exposure we have for this asbestos litigation ... .' [¶175]	Asbestos reserves	Yes
8/9/2001	Halliburton filed its 2ndQ 01 10-Q ... The 10-Q repeated Halliburton's earlier reported 2ndQ 01 financial results and also stated ... that Halliburton had an accrued liability of $124 million and that 'the known open asbestos claims asserted against us will be resolved without a material adverse effect on our financial position or results of operations.' [¶178]	Asbestos reserves	No

10/4/2001	Foshee spoke at a Deutsche Banc Alex. Brown seminar for analysts and specifically discussed the asbestos situation, but did not disclose the recent huge verdict. [¶183]	Asbestos reserves	No
10/23/2001	Halliburton held a conference call for analysts and money managers, conducted by Lesar and Foshee, Halliburton' s new CFO: 'Foshee: ... There really is not any, anything new to report on Harbison-Walker other than the fact that that new claims, during the quarter naming Dresser as a defendant, were only 1,300. Beyond that, we just don't have enough information yet to start to put detailed numbers together ... on-things like the total settlement cost.' ...	Asbestos reserves	No

	'Lesar: But, I think it's fair to say ... that there have been no adverse developments at all with respect to the Harbison-Walker situation ..... [O]ur settlement rate continues to be at historical levels .... And ... we keep getting paid by our insurers for those that we do settle. And I think those are three early positive data points that people need to start puffing into their thinking ...., [¶185]		
11/8/2001	Halliburton filed its 3rdQ 01 10-Q ... [T]he 10-Q reported an accrued liability of $125 million and stated: '[W]e believe that open asbestos claims will be resolved without a material adverse effect on our financial position or the results of operations.' [¶189]	Asbestos reserves	No

Appendix C

On 20 of the 22 alleged missstatement dates in the Complaint, Ms. Nettesheim's event study results are not consistent with an increase in alleged inflation in Halliburton's stock price. April 26, 2001 and July 26, 2001, the only dates of statistically significant price increases, are also not consistent with alleged inflation entering Halliburton's stock price.

Plaintiff only alleged misstatements regarding asbestos reserves on these two dates. And from these dates on, through the rest of the alleged class period there are no further alleged misstatements or curative disclosures regarding the integration of Dresser and unapproved claims allegations. Therefore, logically, the only allegation that could allegedly inflate the stock price on these dates relates to asbestos reserves. Yet neither of these dates are consistent with a claim of inflation regarding asbestos reserves. On April 25, 2001 we cannot find any news about asbestos at all. On July 26, 2001, Halliburton announced an *increase* in its asbestos reserves, which, according to Plaintiff's theory, should have lowered Halliburton's stock price, and therefore not the cause of alleged inflation. The likely explanation for the increase in the stock price on both of these dates is positive earnings announcements.[69] The positive earnings announcements cannot be linked to loss causation because there are no subsequent alleged curative disclosures related to any of the allegations other than those regarding asbestos reserves.

---

69. On April 25, 2001, Halliburton issued a press release: "Halliburton Company First Quarter Earnings Increase 219 Percent -Energy Services Group Operating Income Quadruples." On July 25, 2001, Halliburton issued a press release: "Halliburton Company Second Quarter Revenues and Earnings Continue to Soar."

Appendix C

XII. IF NETTESHEIM'S METHODOLOGY IS APPLIED TO A PEER OF HALLIBURTON, IT ILLOGICALLY APPEARS TO YIELD LOSS CAUSATION FOR THE PEER

As further evidence that Ms. Nettesheim's methodology is unreliable, when her methodology is applied to a company different from Halliburton, her methodology appears to yield loss causation for that company as well. As an example, we applied Ms. Nettesheim's methodology to one of Halliburton's peers: McDermott International, Inc. ("McDermott").

We performed the same steps used by Ms. Nettesheim in her analysis of loss causation to McDermott.

Step 1: **An event study test of the statistical significance** of McDermott's stock price movement on each day during the alleged class period (in this matter): we used the same control period and the same market and industry indexes, only replacing McDermott with Halliburton in the industry index, and, like Ms. Nettesheim, tested the statistical significance on each day during the alleged class period. For Halliburton, Ms. Nettesheim found 31 dates during the alleged class period with statistically significant price movements; for McDermott, we found 97 dates with statistically significant price movements. Note that McDermott had more than three times as many statistically significant price movement dates during the alleged class period as Halliburton, which is more than would be expected given the normal daily movement over the control period.

Appendix C

Step 2: **A review of the news** on each statistically significant day. Ms. Nettesheim's methodology is to simply look for any "information about the engineering and construction business" to justify designating her statistically significant price decline days as curative disclosure days.[70] If we apply Ms. Nettesheim's methodology to McDermott, which is listed as being part of her industry index in Exhibit 16 to her report, we can similarly "justify" loss causation for a number of negative announcements relating to that company. We searched for news announced about one of McDermott's major business units, the Marine Construction Services unit ("Marine Construction"). McDermott's Marine Construction unit parallels some of the functions of Halliburton's E&C unit.[71]

---

70. For example, she testified as follows regarding her conclusion that December 22, 2000 was a curative disclosure of the allegations related to unapproved claims and the integration of Dresser: "I mean, generally, it contains information about the engineering and construction business. And it gives you some information about that business." [Nettesheim Deposition, p. 126]

71. Halliburton's Form 10-K filed on March 27, 2001 states: "Brown & Root Energy Services provides worldwide engineering and construction services ... The offshore group integrates capabilities required to plan, engineer, construct, and operate offshore production facilities...Capabilities include the engineering, procurement, and construction of offshore drilling and production platforms..."

McDermott's Form 10-K405 filed March 27, 2001 states: "Marine Construction Services... This segment's principal activities include the design, engineering, fabrication and installation of offshore drilling and production platforms and other specialized structures ... and procurement activities." [p. 5]

Appendix C

Step 3: **A determination of loss causation** - if the news on a day of a statistically significant negative reaction was related to the "allegations." We found that there are multiple instances of negative news announcements regarding Marine Construction during the alleged class period which had statistically significant negative price reactions according to Ms. Nettesheim's methodology.

There are two tables below. The first table presents Ms. Nettesheim's loss causation results for Halliburton, while the second table presents the application of Ms. Nettesheim's loss causation methodology to McDermott. For Halliburton, the methodology yielded four curative disclosures "proving" loss causation; for McDermott, the methodology yielded five curative disclosures "proving" loss causation.

The following is an excerpt from the Nettesheim Report for her four alleged curative disclosures relating to Halliburton's E&C business.[72]

72. Nettesheim Report, ¶45.

Results of Nettesheim Loss Causation Analysis for Halliburton

Date	Actual Return	Company-Specific Return	News
10/5/1999	-13.2%	-9.0%	The Company warned that it expected its 1999 third-quarter earnings to be in the range of 11 to 13 cents per diluted share. The previous average analyst estimates was 19 cents per share. The Company attributed the reduction in large part, to the lower than expected profits of the joint ventures of its engineering construction units and many of the other business units of the Dresser Equipment Group.
1/5/2000	-4.4%	-4.3%	Analysts cut their estimates of Halliburton's earnings for 2000 and 2001 following a conversation with the company.
10/25/2000	-11.0%	-6.6%	Halliburton announced that it intended to restructure and shrink its engineering and construction units into a single unit, which prompted certain analysts to cut earnings forecasts.

12/22/2000	-2.7%	-3.9%	On December 21, Halliburton pre-announced fourth-quarter earnings and formally unveiled the restructuring of its engineering and construction units and stated that it planned to take a charge of $120 million in the fourth quarter, the bulk of which was due to cost overruns at several overseas projects. On December 22, the overall market was up more than 3.0% such that this was as statistically significant decline.

Appendix C

Similarly, we present a table for McDermott of selected dates with statistically significant price declines listing actual returns, company specific returns, and descriptions of negative news relating to Marine Construction.

Appendix C

Results of Nettesheim Loss Causation Analysis as Applied to McDermott

Date	Actual Return	Company-Specific Return	News
11/11/1999	-26.7%	-25.0%	The Company released its 1999 second-quarter earnings, an Associated Press article stated:[73] "Second-quarter earnings at McDermott International Inc., an energy services company, fell sharply because of a fall in demand for offshore petroleum construction services, the company reported ...the market for marine construction services probably will not begin to recover before the first quarter of the 2000-2001 fiscal year."
11/12/1999	-36.4%	-39.6%	Represents further concern about prior day's earnings announcement. An article from Reuters News stated:[74] "Shares of engineering and construction company McDermott International Inc. fell sharply for the second straight day on Friday following the company's report of disappointing quarterly earnings ... McDermott said the decline in earnings was most marked at its Marine Construction business ..."

73. Associated Press Newswires, November 11, 1999, "Slowdown in offshore activity cuts earnings sharply."

74. Reuters News, November 12, 1999, "McDermott shares fall again sharply."

Appendix C

2/22/2000	-11.6%	-10.2%	The Company released its 1999 third-quarter earnings, an Associated Press article stated:[75] "McDermott lost $23.2 million, or 39 cents per share ... Analysts surveyed by First Call-Thomson Financial had forecast third-quarter earnings of 17 cents per share ... McDermott said the reduced revenue primarily came from J. Ray McDermott, its marine construction services unit"
8/2/2000	-6.3%	-7.5%	The Company released its 2000 second-quarter earnings, an Associated Press article stated:[76] "McDermott lost $10 million, or 17 cents per share ... Analysts surveyed by First Call-Thomson Financial had forecast a second-quarter profit of 6 cents per share ... McDermott has been suffering losses in its marine construction division."

75. Associated Press Newswires, February 22, 2000, "Third-quarter earnings take a nosedive."

76. Associated Press Newswires, August 2, 2000, "Second-quarter loss, new chief executive officer."

Appendix C

2/23/2001	-15.6%	-14.1%	The Company released its 2000 fourth-quarter earnings, a Business Wire article stated:[77] "McDermott International Inc. (NYSE: MDR), today reported a net loss of $25.5 million, or $0.42 a diluted share, for the fourth quarter of 2000" and a Dow Jones News Service article stated:[78] "Warning of continued low marine construction volume, McDermott said its first quarter earnings are likely to be below the breakeven level that analysts are currently expecting."

77. Business Wire, February 23, 2001, "McDermott International Reports Fourth Quarter and Year-End Earnings for December 2000."

78. Dow Jones News Service, February 23, 2001, "McDermott Intl 4Q Losses 42c/Shr On Chgs Vs 39c."

The fact that Ms. Nettesheim's methodology yields loss causation when applied to another company is further evidence of the method's unreliability. Based on Ms. Nettesheim's methodology for testing loss causation, one could conclude loss causation for McDermott, including, for example, for allegations regarding unapproved claims. (While the McDermott disclosures above do not mention unapproved claims, neither did the Halliburton disclosures that Ms. Nettesheim claims were curative.) Such a conclusion is clearly unreasonable given that there are no allegations that McDermott made any misrepresentations regarding unapproved claims. A test is not reliable if, regardless of the underlying condition under study, it yields a positive result.

XIII. SUMMARY

Ms. Nettesheim has not proven loss causation. The Nettesheim Report does not show a causal link between any of the alleged misstatements and Plaintiff's alleged economic loss. The event study used to test loss causation is methodologically flawed. It is based on tests of statistical significance that are invalid and do not produce reliable or robust results.

Ms. Nettesheim has no systematic or reliable method of identifying curative disclosures and testing loss causation. There is non-culpable news released on the dates of her alleged curative disclosures, and she performs no analysis to determine whether Halliburton's stock price decline on the dates of her alleged curative disclosures is due to non-culpable news.

Appendix C

To analyze loss causation, an understanding of the specific alleged misrepresentations and a proper linking to an actual curative disclosure of the alleged misrepresentations is necessary. In addition, one would need to, at a minimum, parse out the effect of other potentially confounding news that is released to the market at the same time.

Not only does Ms. Nettesheim's analysis not support the finding of loss causation, the evidence presented in her report indicates the contrary:

- According to her event study, there is no significant stock price increase that can be attributed to any of the alleged misstatements.

- The total number of statistically significant price reactions during the alleged class period is no more than expected given the normal daily variation of the stock price.

- Her results are not robust to small changes in the methodology, e.g., if the control period changes, most of the alleged curative disclosures are no longer statistically significant.

- On the only curative disclosure actually linked to an alleged misrepresentation (the disclosure of the accounting for unapproved claims in the 1999 Form 10-K), there is no statistically significant price reaction.

[Tables Intentionally Omitted]

Appendix D

As demonstrated in Plaintiff's Motion for Class Certification, Plaintiff has established each of the requisites for class certification. Plaintiff Archdiocese of Milwaukee Supporting Fund ("AMS Fund or Plaintiff") has shown that it, along with Col. Ben Allen Murphey ("Col. Murphey"), are adequate class representatives whose claims are typical of the class. Moreover, Plaintiff has made the requisite showing of market efficiency (which Defendants do not dispute) and loss causation, and thus is entitled to prevail upon the fraud-on-the-market theory for purposes of class certification.

I. PLAINTIFF HAS SATISFIED THE REQUIREMENT OF RULE 23(b)(2).

Defendants do not dispute that Plaintiff has satisfied the numerosity, commonality, and adequacy of counsel requirements of Rule 23(b)(2), and have focused instead on the typicality and adequacy of AMS Fund and Col. Murphey. Defendants' attacks are without merit, and the Court should certify both AMS Fund and Col. Murphey as representatives of the class.

A. AMS Fund Is an Adequate Class Representative Whose Claims Are Typical of the Class.

In attacking the adequacy and typicality of AMS Fund, Defendants argue that AMS Fund's delegation of its investment decisions to a money manager and the fact that an officer other than Paula John appeared for the 30(b)(6) deposition make the AMS Fund an atypical and/or inadequate Class Representative. In support of

the first attack, Defendants cite two district court cases from the Seventh Circuit that are not even followed in their own circuit. For the latter argument, they cite no authority at all.

1. The Delegation of Investment Decisions Does Not Make AMS Fund Atypical or Inadequate

Defendants cite *Fry v. UAL Corp.*, 136 F.R.D. 626 (N.D. Ill. 1991), and *In re Caremark International, Inc. Securities Litigation*, No. 94 C 4751, 1996 WL 351182, at *6 (N.D. Ill. June 24, 1996) for the proposition that "a certain minimal level of participation by the plaintiff in the relevant stock transaction must be demonstrated." *Id.* at 635. Relying solely on *Fry* and *Caremark*, Defendants argue that AMS Fund is not adequate or typical because it was AMS Fund's money manager who made the decision to purchase the Halliburton stock. However, neither *Fry* nor *Caremark* is followed in its own circuit, let alone other circuits, and should not be followed here. For example, the court in *In re Neopharm, Inc. Securities Litigation*, 225 F.R.D. 563 (N.D. Ill. 2004), stated that, "to the extent *Caremark* can be read to hold that those who rely on others to make investment decisions are unfit to serve as class representatives, this court would disagree." *Id.* at 567.[1] *Neopharm* went on to recognize that institutional investors such as AMS Fund, are exactly the type of class representative ***Congress intended*** to oversee securities

1. *See also, Retsky Family Ltd. Partnership v. Price Waterhouse LLP*, No. 97 C 7694, 1999 WL 543209, at *6 (N.D. Ill. July 23, 1999).

actions under the PSLRA. *Neopharm*, 225 F.R.D. at 567 (*quoting In re Cendant Corp. Litig.*, 264 F.3d 201, 243-44 (3d Cir. 2001)).[2] Defendants cite no other cases from any circuit that have followed *Fry* or *Caremark*, and this Court should not be the first.

2. AMS Fund's Designation of An Officer Other Than the CEO As Its Corporate Representative Does Not Render AMS Fund Inadequate.

Defendants argue that AMS Fund is not an adequate representative, because the absence of AMS Fund's CEO, Paula John, from the Rule 30(b)(6) deposition means that AMS Fund's counsel is actually directing the litigation. This leap of logic aside, Defendants cite no case for the proposition that a specific corporate officer must attend the Rule 30(b)(6) deposition in order to be adequate. The law is to the contrary.

Courts have, with virtual uniformity, found that the adequacy requirement is met even if an individual other than the top executive attends the Rule 30(b)(6) deposition, even if that individual has a more limited knowledge of the litigation. *See, e.g., In re WorldCom, Inc. Sec. Litig.*, 219 F.R.D. 267, 287 (S.D.N.Y. 2003). Patrick Byrne, who

2. Courts in other circuits have also declined to adopt *Fry* and *Caremark*, instead holding, like *Neopharm*, that institutional investors who delegate investment decisions not only meet the adequacy and typicality requirements, but are precisely the type of representatives envisioned by the PSLRA. *In re Vicuron Pharm., Inc. Sec. Litig.*, 233 F.R.D. 421, 429 (E.D. Pa. 2006).

serves as Vice President, CFO and Treasurer of AMS Fund (Deposition of Patrick Byrne, "Byrne Dep. 17:11-18:24, Pl. App. at 081-088), is a senior officer of Plaintiff and has sufficient knowledge of the litigation to serve as an adequate corporate representative for a Rule 30(b)(6) deposition, and Defendants have not challenged the adequacy of his deposition responses.

As discussed in Plaintiffs' Motion, AMS Fund's claims are typical of those of the class and it will adequately protect the interests of absent class members. *See Berger v. Compaq Computer Corp.*, 257 F.3d 475, 482 (5th Cir. 2001).[3] Accordingly, AMS Fund should be certified as a class representative.

B. Col. Murphey Is an Adequate Class Representative Whose Claims Are Typical of the Class.

Defendants' sole attack on the adequacy and typicality of Col. Murphey as a class representative is the timing

---

3. As this Court has previously recognized, AMS Fund has played an active role in and controlled this litigation; has zealously represented the class when Defendants offered an inadequate settlement, objected to its approval, and worked with counsel to defeat it; and when former lead counsel attempted to exert control over the litigation to the exclusion of the AMS Fund, Lead Plaintiff successfully sought to have that counsel replaced. Byrne Dep. at 81:1-24, Pl. App. at 089. Finally, AMS Fund remains in frequent contact with current Lead Counsel, and is actively consulted on the strategy and prosecution of this matter. As this Court has previously found, AMS Fund satisfies all the elements set forth in the *Berger* decision.

and frequency of his trades of Halliburton stock. However, even if this Court accepts Defendants' characterization of Col. Murphey as a "day trader," this does not preclude a finding that he satisfies the typicality requirement.[4] Multiple courts have found that "day traders" satisfy Rule 23's typicality requirements because "where false information and misleading omissions pollute the market, all types of investors are injured." *In re Royal Ahold N.V. Securities and ERISA Litigation*, 219 F.R.D. 343, 354 (D. Md. 2003).[5]

That Col. Murphey profited from some of his trades of Halliburton stock does not make him atypical, as he also retained a large block of shares at the end of the class period that he previously purchased at near class period highs. That the value of those shares is greater today than at the purchase date is irrelevant since Col. Murphey's losses must be measured during the class period and not by the current price of Halliburton stock. *See Ong ex rel. Ong v. Sears, Roebuck & Co.*, 459 F. Supp. 2d 729, 751 (N.D. Ill. 2006). Col. Murphey purchased Halliburton stock ***after*** the Defendants made material misrepresentations

---

4. Col. Murphey does not fit the description of a "day trader" provided by other courts. Col. Murphey did not make dozens of trades in a single day, or close out his positions at the end of each day, and he certainly was not trying to make a career out of buying and selling stock. *Taubenfeld v. Career Educ. Corp.*, No. 03 C 8884, 2004 WL 554810, at *3 (N.D. Ill. Mar. 19, 2004).

5. See also *Aviva Partners, LLC v. Navarre Corp.*, No. Civ. 05-1151 PAMRLE [MDL], 2005 WL 3782255, at *3 (D. Minn. Dec. 13, 2005) (proposed lead plaintiff was not atypical due to her status as a day trader).

that artificially inflated the stock price, and he suffered losses when the falsity of those statements was revealed. *See also* § II.A.1. below. Accordingly, his claims are typical of those of the class.

Col. Murphey is an adequate lead plaintiff under *Berger,* and his knowledge of and control over this litigation are exactly what one would expect from a non-lawyer class representative. *See Berger,* 257 F.3d at 482.[6] Accordingly, Col. Murphey should be certified as a class representative.

II. LEAD PLAINTIFF HAS SATISFIED THE REQUIREMENTS OF RULE 23(b)(3)

Certification under Rule 23(b)(3) requires a plaintiff to

---

6. Col. Murphey testified that both before and after he purchased Halliburton stock, he was an active researcher of Halliburton stock who relied on publicly available information and company statements to guide his investments in the Company. Murphey Dep. at 55:2-56:10; 94:11-95:2, Pl. App. 080-081.01. He testified that he understands the reasons for this litigation (37:21-25, Pl. App. 077); has a general understanding of the allegations (44:8-20, 123:10-128:25, Pl. App. 079, 083, 084); that it was his decision to sue Halliburton (62:5-63:6, Pl. App. 081); and that he thoroughly reviews all the documents and filings that are part of this case (39:2-13, 117:3-122:6, Pl. App. 078, 082.01). Finally, Col. Murphey's testimony clearly shows that he will zealously represent the interests of the class. When asked hat being a class representative meant to him, he responded: "Well, I hope to be the eyes, ears, and mouth for those that aren't here, and be or take as much information as I can and interpret it or those that aren't here and do the best I can for them." (131:24-132:4, Pl. App. 084.01).

establish that issues common to the class will predominate over issues affecting any individual class member, and that a class action is superior to other available methods of adjudication. Defendants do not challenge that the class action mechanism is the superior vehicle for resolving the securities fraud claims alleged by Plaintiff in the Complaint. Defendants' sole challenge is that Plaintiff has failed to establish entitlement to rely on the fraud-on-the-market presumption, and therefore, that individual issues of reliance will predominate. Defendants are wrong.[7]

A. Defendants Overstate Plaintiffs' Class Certification Burden.

Pursuant to the Fifth Circuit's recent decision in *Oscar Private Equity Investments v. Allegiance*, 487 F.3d 261 (5th Cir. 2007), and as discussed in *Ryan v. Flowserve Corp.*, 245 F.R.D. 560 (N.D. Tex. 2007), in order to prevail upon the fraud-on-the-market presumption, a Plaintiff must now establish loss causation.[8] While *Allegiance*

7. Defendant David J. Lesar ("Lesar") cites no authority for his position that the class cannot be certified against him under these circumstances. Indeed, the authority is to the contrary. Courts in this circuit routinely certify securities fraud class actions against corporations and their officers collectively. *See e.g., Feder v. Elec. Data Syst. Corp.*, 429 F.3d 125 (5th Cir. 2005) (affirming certification of class action by securities purchaser against corporation and its former CEO and CFO). Moreover, as shown below, the relevant misrepresentations were either authorized by Lesar, or made directly by him.

8. Defendants' Response does not dispute that the stock of Halliburton trades on an efficient market. An efficient market is by definition one in which "it is assumed that all public information

raised the bar for class certification, it does not raise it to the extent that Defendants suggest.

1. The Impact of Defendants' Fraud Is Demonstrated Through Showing a Material Price Decline Following Partial Disclosure of the Fraud.

Defendants argue that to show loss causation Plaintiff must show a statistically significant price increase following a misrepresentation.[9] However, both *Greenberg v. Crossroad Systems, Inc.*, 364 F.3d 657 (5th Cir. 2004), and *Allegiance* are clear that to show price inflation

---

concerning a company is known to the market and reflected in the market price of the Company's stock." *Greenberg Crossroads Systems, Inc.*, 364 F.3d 657, 661, n.6 (5th Cir. 2004) (*citing Blackie v. Barrack*, 524 F.2d 891, 907 (9th Cir. 1975)).

9. For instance, Defendants state:

> "AMS [Fund's] own expert, however, affirmatively disproved the most basic element of securities fraud – inflation of the stock price. For example, she could not identify any instances before April 2001 when Halliburton's stock price increase in connection with a Company announcement in a way significantly different from an index of similar companies."

Def.'s Resp. at 4. *See also*, Def.'s Resp. at 11, (plaintiff failed to prove loss causation because it did not show that Halliburton statements had a positive impact on Halliburton's stock price); Def.'s Resp. at 12, ("to show loss causation plaintiffs must show an increase in stock price immediately following the release of positive information.").

due to a misrepresentation, it is not necessary to show a statistically significant increase in the stock price in response to the false statement. Rather, *Greenberg*, relying on *Nathenson v. Zonagen, Inc.*, 267 F.3d 400, 414, (5th Cir. 2001), specifically noted that to show that the misrepresentations or omissions affected the stock price, a plaintiff can show **either** an increase in price following the allegedly false statement ***or*** "a corresponding decrease in price following the revelation of the misleading nature of these statements." *Id.* at 665. In *Allegiance,* the Fifth Circuit advanced the timing of the requirement to show loss causation from the summary judgment stage to the class certification stage, but reiterated that loss causation can be established by showing a decline in the stock price after disclosure of the truth. *Allegiance,* 487 F.3d at 266. Plaintiff has satisfied this burden. [10]

2. Defendants' Fraud Is Demonstrated by Relating the Alleged Fraud to the Corrective Disclosures.

Relying on *Greenberg* and *Flowserve,* Defendants argue that in order to establish loss causation on a price decline, a plaintiff must specifically "pinpoint" "particular statements" that a disclosure corrected. Def.'s Resp. at 14. However, these decisions are clear that the corrective disclosure need only be "related" to the alleged fraud:

---

10. Attached at Plaintiff's Appendix at __ - __ are summaries of Defendants' misrepresentations, the partial disclosures and the resulting impact on Halliburton's stock price.

> To raise an inference through a decline in stock price that an earlier false, positive statement actually affected a stock's price, the plaintiffs must show that the false statement causing the increase was ***related*** to the statement causing the decrease.

Greenberg, 364 F.3d at 665; *see also, Flowserve*, 245 F.R.D. at 569. In other words, the decline must be related to "the tenets of plaintiffs' alleged fraud." *Flowserve*, 245 F.R.D. at 572. Plaintiff has satisfied this standard. Plaintiff's expert, Jane Nettesheim, testified that she read the Complaint and identified the alleged misrepresentations and omissions, and clearly "related" each of the corrective disclosure "to the tenets of Plaintiff's alleged fraud."

3. Plaintiffs' Evidence Complies With the Requirements of the Fifth Circuit.

Defendants take an overly restrictive view of the evidence that *Allegiance* permits a plaintiff to use to show loss causation. The *Allegiance* court noted that such proof could come in the form of an event study, and explicitly left open the possibility of other "options, subject to scrutiny in the first instance by opposing experts and the district courts." *Allegianc*, 487 F.3d at 265, n.22. This holding is consistent with *Greenberg*'s recognition that in some circumstances, even when both culpable and non-culpable disclosures are present, it is sufficiently evident that the stock was driven down by the culpable disclosure such that no empirical analysis is required at all. *Greenberg*,

364 F.3d at 668-69. In addition, *Allegiance* suggested that analysts' opinions may be sufficient evidence of the cause of a stock decline when their underlying data is also analyzed.[12] *Allegiance*, 487 F.3d at 271. Here, where there was both culpable and non-culpable news, Ms. Nettesheim did not just rely on analyst's conclusions to allocate the cause of a decline, but also reviewed their models and underlying data, and conducted the "post-mortem" that the *Allegiance* court suggested could be sufficient. Nettesheim Rep. ¶ 81.

4. Loss Causation Need Only Be Established By a Preponderance of the Evidence, Not Beyond a Reasonable Doubt.

Defendants make unsubstantiated factual assertions, with the apparent implication that Plaintiff must disprove these facts in order to obtain class certification.[13] That,

---

12. Specifically, the *Greenberg* court held: "We do not insist upon event studies to establish loss causation, helpful though they may be. We hold only that the opinion of these analysts without reference to any post-mortem data they have reviewed or conducted is insufficient here." Defendants' expert similarly acknowledged that reviewing analyst reports "gives a perspective of what the analyst might have considered important or new or different" information. Allen Dep. at 41:4-9.

13. Indeed the bulk of Defendants' "background" section is comprised of merit-based factual assertions that are independent of Plaintiff's showing of loss causation, and thus inappropriate for resolution on a Motion for Class Certification. *Allegiance*, 487 F.3d at 267. For example, without a scintilla of evidence, Defendants assert

however, is not the burden imposed by *Greenberg* or *Allegiance*. Under *Allegiance*, the plaintiff need only prove loss causation by a preponderance of the evidence. *Allegiance*, 487 F.3d at 269. Thus, "the district court must consider all evidence, both for and against loss causation . . .," weigh the evidence, and determine whether it is more likely than not that the partial disclosure caused the decline in the company's stock price. *Id.* at 266. Under this standard, once a moving party meets its initial burden, the non-moving party must produce evidence to the contrary, and if the non-moving party fails to do so, the moving party must prevail. *Id.* at 265; *Flowserve*, 245 F.R.D. at 569 n.12; *see also, Celotex Corp. v. Catrett*, 477 U.S. 317, 322-24 (1986).

Significantly, while Defendants rely heavily on the *Flowserve* decision, in that case defendants produced affirmative evidence controverting loss causation. The *Flowserve* court found that Defendants' detailed "event studies and review of analyst commentary" to be "particularly persuasive." *Flowserve*, 245 F.R.D at 576. In contrast, Defendants here have failed to produce any such evidence. Instead, Defendants have simply attempted to discredit Plaintiff's evidence. As described by Ms. Allen,

---

(at 6) that "the major fixed-price construction projects on which the Company accrued unapproved claims were not part of the Company's Engineering Construction Group. For that reason, disclosures related generally to engineering and construction, or E&C do not necessarily relate, as [AMS Fund] and Nettesheim suggest to the unapproved claims allegations." Defendants provide absolutely no factual support for this assertion, and it and other such factual assertions should be disregarded by the Court.

her job was not to assess whether there was loss causation in this case, but rather her "entire analysis is an analysis of [Ms. Nettesheim's] analysis." Allen Dep. at 79:5-19, Pl. App. 096. This "analysis of [an] analysis" is a far cry from the detailed event studies and review of analyst commentary that the *Flowserve* court found "particularly persuasive." Because Defendants failed to produce any controverting evidence, should Defendants' Motion to Strike fail, as it should, Plaintiff's evidence is sufficient to carry Plaintiff's burden to establish loss causation.[14]

5. Plaintiff Is Not Required to Plead Each Corrective Disclosure in its Complaint.

Defendants complain that three of the material corrective disclosures that Plaintiff has used to demonstrate that the earlier fraudulent misrepresentations affected the market are not identified in the Complaint. Def.'s Resp. at 123-24. However, no such requirement exists. In *Nathenson*, the Fifth Circuit explained that plaintiffs must specify ***the statements contended to be fraudulent***, the speaker, when and where the statements were made, and why they were fraudulent. *Nathenson*, 267 F.3d at 412. Defendants cite no authority that requires a complaint to list the corrective disclosures, and Plaintiff knows of none.

---

14. Plaintiff hereby incorporates by reference Plaintiff's Opposition to Defendants' Motion to Strike the Expert Report of Jane Nettesheim and Plaintiff's Motion to Strike the Expert Report of Lucy Allen.

6. Defendants Are Not Required to Confess to the Fraud in Order for Their Misrepresentation to Be Actionable.

In their most far-reaching mischaracterizations of the law, Defendants argue that in order for a corrective disclosure to "reveal" the fraud, the defendants must "admit," or confess, to having committed fraud. Specifically, Defendants contend that Ms. Nettesheim's entire analysis is "invalid" because it is based on corrective disclosures in which "the company had not admitted to prior misrepresentations or to fraud." Def.'s Resp. at 24, n.58. In other words, according to Defendants, absent a confession, a securities class action could never be certified. Not surprisingly, Defendants cite no authority for this remarkable assertion of law.

B. Plaintiff Has Established Loss Causation as to the Fraud Alleged in the Complaint. Plaintiff submitted the Nettesheim Report in support of its Motion for Class Certification as evidence of loss causation. As set forth in that report, Ms. Nettesheim properly performed the loss causation analysis required by the Fifth Circuit.[15]

---

15. Starting on page one, where Defendants assert that "Nettesheim repeatedly admits that she did not conduct the type of inquiry the Fifth Circuit requires" (for which they do not even attempt to reference Ms Nettesheim's testimony, citing only their Motion to Strike), Defendants repeatedly mischaracterize, and often blatantly misstate, Ms. Nettesheim's testimony. *See also*, Defendants' Res. at 11-13 (falsely claiming that Ms. Nettesheim linked the corrective disclosures to only two prior misrepresentations, and that she did not analyze the

Appendix D

1. Nettesheim's Methodology is Proper and Supports Her Loss Causation Conclusion.

Ms. Nettesheim did not, as Defendants imply, bypass the *Allegiance* analysis and find that every significant decline in the price of Halliburton stock was due to a "corrective disclosure." Def.'s Res. at 18-20. Indeed, she attributed several instances of significant decline to market or industry factors and did not consider them to be corrective disclosures.[16] Even when the news was company-specific, Ms. Nettesheim did not in all instances find that the decline was a "corrective disclosure" that related to the allegations of the complaint. For example, on October 27, 1999, Ms. Nettesheim identified a material decline of 3.5% in Halliburton's stock price. Nettesheim Rep. ¶ 45. Ms. Nettesheim concluded that this decline was due to lowered estimates by an analyst, and was not related to the allegations in the Complaint. *Id.* Thus, she did not consider it to be a corrective disclosure.[17] While the plaintiff's expert in *Flowserve* may have attempted to relate such broad company-specific news to the "tenets"

---

portion of stock decline that was attributable to the correction of Halliburton's prior disclosures); *id.* at 14-15 (same).

16. *See, e.g.*, Nettesheim Rep. ¶ 44 (finding no Halliburton news on June 18, 1999, Oct. 15, 1999, Feb. 25, 2000, May 19, 2000, or Nov. 6, 2001).

17. Similarly, Nettesheim did not find loss causation on October 23, 2000, when the company announced that one of its divisions was the subject of a grand jury investigation, and the Company's stock price fell a statistically significant 3.5% on the following day. Nettesheim Rep. ¶ 45.

of the complaint, Ms. Nettesheim did not do so here.

For days with multiple pieces of news, Ms. Nettesheim undertook an analysis to separate the negative culpable news from non-culpable news that might have affected the stock price. Ms. Nettesheim controlled for price movements attributable to news affecting both the market as a whole and the industry in which Halliburton operated.[18] Thus, the *Flowserve* court's criticism that the plaintiff there did not filter out the effects of market and industry news is not applicable here. *Flowserve*, 245 F.R.D. at 577.

Then, where appropriate, Ms. Nettesheim controlled for other company-specific negative news on days where there was both culpable and non-culpable news. Specifically, Ms. Nettesheim reviewed available analyst models and reports, as well as Halliburton's own statements, parsed out the negative price movement, and opined on which pieces of news had a significant impact on the price movement.[19] Defendants' position that Ms. Nettesheim was required to do something more is contrary to the *Allegiance* decision, which held that analysts' opinions,

---

18. For example, the "lower than expected . . . spending by major oil companies," which Defendants designate as other negative news on October 24, 2000, was industry news, and the effect of that news on Halliburton stock is factored out of Halliburton price movements through Nettesheim's industry's index. Nettesheim Rep. ¶ 90.

19. Contrary to Defendants' implication, Plaintiff is not required to allocate precise percentages of cause for class certification. *Allegiance*, 487 F.3d at 270.

combined with reference to a "post mortem" analysis of their data and information, can be sufficient to allocate the cause of a price decline. *Allegiance,* 487 F.3d at 271.

In short, consistent with the requirements of the Fifth Circuit, Ms. Nettesheim related each of the corrective disclosures to Plaintiff's allegations of fraudulent misstatements; performed a regression analysis to eliminate movements due to market or industry news; and, where appropriate, analyzed the news and data and determined whether the culpable news had a significant effect on the price of Halliburton stock – none of which was done by the *Flowserve* Plaintiffs. Accordingly, as discussed below, for each of the class period misrepresentations and omissions alleged in the Complaint, Plaintiff has shown loss causation under *Greenberg, Allegiance,* and *Flowserve.*

2. Halliburton's Misrepresentations Regarding the Dresser Acquisition and Large Fixed-Price Contracts Affected the Market.

Plaintiff has demonstrated loss causation as to Halliburton's fraudulent misrepresentations regarding the Dresser acquisition and large fixed-price contracts. Set forth below are each of the partial corrective disclosures, and the fraudulent misrepresentations to which they relate.

Appendix D

a) The Market's Reaction to Halliburton's Partial Corrective Disclosure on October 4, 1999 Demonstrates Loss Causation.

On July 22, 1999, Halliburton conducted a conference call with analysts during which Cheney said, among other things, that Halliburton's "aggressive cost reduction program and restructuring activities" allowed Halliburton "to remain profitable," and that Halliburton's management remained "optimistic." FCAC ¶ 109. On the same day, Halliburton also promised analysts that "sequential quarterly results should continue to improve with significant improvement in 2000." FCAC ¶ 110.

As expected and intended by the Company, an analyst who participated in the July 22 call reported back to the market.[20] In discussing the progress of the Dresser integration, Dain Rauscher Wessels stated that the Dresser integration was "on or ahead of schedule" and that management expected the annualized cost savings from the acquisition to be approximately $500 million.[21] FCAC ¶¶ 110. This estimate doubled the $250 million annual benefit the Company had previously represented would result from the acquisition. *Id.* These statements

---

20. As Defendants' expert Lucy Allen acknowledges, conference calls with analysts was the way the company communicated with the market. Allen Dep., at 36: l-19; 39:l-4, Pl. App. 093, 094.

21. Halliburton completed the $7 billion acquisition of Dresser on September 29, 1998.

were reaffirmed on September 13, 1999, in a presentation that Lesar made to the Dain Rauscher Wessels Energy Conference. FCAC ¶ 115.

During neither the July conference call nor the September presentation, did Halliburton mention the significant problems with the Dresser integration, the poor performance of the Dresser joint ventures and subsidiaries, or the significant cost overruns and unapproved claims, all of which were undermining Halliburton's earnings. Nor did the Company disclose that it had changed its method of accounting for unapproved claims, allowing the company to book unapproved claims as revenue, which would not have been allowed under the prior method, thus allowing the company to "remain profitable" and support Cheney's "optimistic" outlook. In addition, because the new accounting would allow future bookings of unapproved (and uncollectible) claims, the Company could forecast "significant improvement in 2000."

Defendants argue that the July and September statements, and indeed every class period statement that relates to Dresser, were merely confirmatory. Def.'s Resp. at 5. To the contrary, a comparison of these statements to pre-class period statements reveals that these statements conveyed new information about the progress of the Dresser integration and did not simply confirm pre-class period statements. On March 1, 1999 (highlighted by Defendants), Halliburton stated that it should attain a $500 million savings by the end of the year through a *combination* of savings from the Dresser integration *and*

from the "downturn." FCAC ¶ 93. In contrast, in July and September, Halliburton stated that the Dresser merger *alone* would create a $500 million annual cost savings. FCAC ¶¶ 110, 115.[22] Furthermore, the July statement provided assurance about the progress of the integration of Dresser, which was not discussed in March. *Id.*

After the market closed on October 4, 1999, Halliburton unexpectedly warned that its 1999 third-quarter earnings would be less than the previous estimates. Nettesheim Rep. ¶¶ 84-87. Halliburton attributed the reduction, in large part, to the lower than expected profits of the Dresser joint ventures and several of the other business units of the Dresser Equipment Group.[23] This news revealed the falsity of Halliburton's previously glowing statements about the substantial benefit Halliburton would receive from the Dresser acquisition, and the progress of the integration of Dresser.[24]

---

22. In addition, in March, Halliburton tentatively stated that the savings "should" result, but in July and September stated with assurance that management "expected" and "projected" the savings to result. FCAC ¶¶ 93, 110, 115.

23. That the Complaint, as discussed above, the fact that these corrective disclosures were not identified in the Complaint is irrelevant.

24. Defendants' contention (at 23) that the October 4, 1999 news does not relate to Dresser is inexplicable. While the Lau report may not use the term "Dresser merger," it notes reduced earnings due to performance of "Dresser Equipment." Moreover, Ms. Nettesheim does not limit her analysis only to the Lau report, a fact ignored by Defendants, but also analyzes a Merrill Lynch report. The Merrill Lynch report attributes the reduced earnings

The market reacted swiftly to the news, resulting in a company-specific stock decline of 9%.[25] *Id.* ¶ 84. Based on the data and information provided by Halliburton, the fact that Halliburton attributed the earnings decline to poor performance by the Dresser subsidiaries, and the lack of other significant news, Ms. Nettesheim concluded:

> a significant portion of the stock price decline on October 5, 1999, was caused by information that partially corrected and related to prior misstatements and omissions regarding the success and benefits of the Dresser merger, and the Company's related operational problems, as alleged in the Complaint.

Nettesheim Rep. ¶ 87.[26] Accordingly, Plaintiff has

---

forecasts in part to "less powerful synergies from the *Dresser merger* than expected." (Nettesheim Rep. ¶ 89) (emphasis added). Defendants also take a restrictive view of Plaintiffs' Complaint to argue that Plaintiffs did not make any allegations relating to the Dresser Equipment Group. However, the Complaint clearly alleges that Defendants were experiencing serious, undisclosed problems with the integration of Dresser, and misrepresented the success and benefits of the Dresser merger. This would clearly include issues relating to the integration and success of Dresser Equipment Group, its subsidiaries and the joint ventures that Dresser owned.

25. Defendants do not dispute that there was a statistically significant decline in the price of Halliburton stock.

26. The fact that Halliburton simultaneously announced that it was selling Dresser's struggling joint ventures does not obviate the market's negative reaction to the news about Dresser,

established loss causation as to the July and September 1999 statements.

b) The Market's Reaction to Halliburton's Partial Corrective Disclosure on January 5, 2000 Demonstrates Loss Causation.

On January 5, 2000, based on conversations with the Company, Brown Brothers Harriman & Co and Merrill Lynch cut their estimates of Halliburton's annual earnings for years 2000 and 2001. Nettesheim Rep. ¶¶ 88-92. This reduction was based on "less powerful synergies from the Dresser merger" than expected, as well as "reduced expectations for offshore construction results." *Id.* ¶ 89. Halliburton's resulting company-specific stock decline was 4.38%, again a statistically significant decline. *Id.* ¶ 88.

While the news on January 5, 2000 included both culpable and non-culpable statements, Ms. Nettesheim properly distinguished between them under the standard set forth in *Allegiance*, 487 F.3d at 271. Ms. Nettesheim controlled for the industry news through her industry index, thus eliminating from the decline that portion of the news related to the decline in oil field spending. Nettesheim Rep. ¶¶ 88-92. Ms. Nettesheim then related a portion of the remainder of the news from that day to the allegations of Plaintiff's Complaint. Looking behind

---

or undercut the loss causation analysis. Nettesheim Rep. ¶¶ 84-87. If anything, the news of the sale of the joint ventures, which Defendants characterize (at 20 and 23) as "positive," simply demonstrates that the market reaction to the news about Dresser would otherwise have been *worse*.

the analysts' conclusions to the underlying data, Ms. Nettesheim concluded that "a significant portion of the stock price decline on January 5, 2000 was caused by information that partially corrected investors' erroneous assessments of the profitability of overseas construction projects and the benefits of the Dresser merger." *Id.* ¶ 92. Accordingly, the January 2000 stock decline further supports Plaintiff's loss causation analysis as to the July and September misrepresentations.

c) The Market's Reaction to Halliburton's Partial Corrective Disclosure on October 24 and December 21, 2000 Demonstrates Loss Causation.

Halliburton's 1999 Annual Report, released in April 2000, included a letter from Cheney informing investors that "[t]he merger with Dresser Industries is now behind us. The potential rewards to our shareholders are vast." FCAC ¶ 122. In fact, as alleged in the complaint, at the time this statement was made, the integration of Dresser was fraught with problems, which were far from "behind" the company. FCAC ¶ 128. The statements about Dresser in the 1999 Annual Report conveyed new information to the market; they did not merely confirm prior statements, as claimed by Defendants. Def.'s Rep. at 5. Halliburton had not previously stated that the Dresser integration was "behind us," or that the shareholders would be "vastly" rewarded. These were key representations, particularly in light of the partial disclosure of Dresser problems that had surprised the market just months earlier.

Appendix D

The 1999 Annual Report also contained misrepresentations about Halliburton's large fixed-price contracts and accounting practices. Halliburton stated that the "group's engineering excellence and construction experience make it possible to take on end-to-end projects of any size in the world . . ." FCAC ¶ 123. Regarding how Halliburton would account for the earnings on such projects (or lack thereof), the Report stated:

> All known or anticipated losses on contracts are provided for currently. Claims and change orders which are in the process of being negotiated with customers for extra work or changes in the scope of work are included in revenue when collection is deemed probable.

FCAC ¶ 124. In fact, Halliburton was, and had been over the past six quarters, recording millions of dollars of claims as revenue. FCAC ¶ 128. While the notes to the financial statements disclosed that unbilled receivables included $89 million in unapproved claims for 1998 and $98 million for 1999, the Company represented that those amounts were "probable" of collection, when in fact Defendants knew that they were not probable of collection, the Company was experiencing increasing difficulties in collecting on unapproved claims, and they were not capable of accurately estimating what amount could ultimately be collected. FCAC ¶¶ 127-128.

On April 26, 2000, Halliburton compounded its deception by releasing its first quarter 2000 results, which were falsely inflated by Halliburton's improper accounting

practices. FCAC ¶¶ 129, 140. On a conference call on the same day, Cheney reported on Halliburton's profits on existing construction projects without disclosing the numerous projects that were suffering from severe cost overruns, and that significant portions of that revenue were from unapproved claims that were not "probable" of collection. FCAC ¶¶ 129, 140.

By October 2000, Halliburton could no longer hide the problems with the Dresser acquisition and integration; the cost overruns on the large end-to-end projects that the Company previously stated its "engineering excellence and construction experience" enabled them to manage; or the increasing difficulties in collecting on the unapproved claims those cost overruns gave rise to. On October 24, 2000, on a conference call to discuss Halliburton's third quarter 2000 earnings, Lesar shocked analysts by revealing that due to serious operational problems, management inefficiencies and excessive costs in its construction operations, the Company planned to undertake a massive restructuring. FCAC ¶¶ 144, 146.

As expected and intended, analysts reported the restructuring to the market, and the market responded. FCAC ¶¶ 145-146. On October 25, 2000, Halliburton's company-specific stock decline was 6.6%, a statistically significant decline. Nettesheim Rep. ¶ 93. After undertaking a comprehensive analysis of the analyst reports, including the underlying data and the models, Nettesheim concluded that at least 50% to 80%, a significant portion, of the stock price decline on October 25, 2000, was related to Plaintiff's allegations regarding

"the Company's booking of unapproved claims on fixed-price contracts and lack of benefits from the Dresser mergers that are alleged by Lead Plaintiff." Nettesheim Rep. ¶ 105.

On December 21, 2000, Halliburton formally unveiled the restructuring plan, and again surprised the market by disclosing that it planned to take a charge of $120 million in the fourth quarter. Nettesheim Rep. ¶ 106; FCAC ¶¶ 150-152. The press release stated that $95 million of the $120 million charge (or 79%) related to cost overruns on "project specific matters." Nettesheim Rep. ¶ 111; Def.'s App. at 114-116. Halliburton explained that it had "incurred significant additional costs" on several large fixed-fee projects, and that management did not believe that all its claims for all the additional costs would be recovered. Def.'s App. at 114-116. Halliburton further explained that its claims on seven other projects had not been resolved. FCAC ¶ 150; Nettesheim Rep. ¶ 106; Def.'s App. at 114-116. The press release alerted the market that the Company was experiencing massive cost overruns and losses, and that the Company had been booking revenue on those contracts when collection was far from "probable."

On December 22, 2000, Halliburton's resulting company-specific stock decline was 3.9 %, a statistically significant decline. Nettesheim Rep. ¶ 109. There was no other news on that date, and Ms. Nettesheim related the disclosures, and the resulting price decline, to Plaintiff's allegations regarding the Company's booking unapproved

claims on fixed-price contracts and lack of benefits from the Dresser merger." Nettesheim Rep. ¶ 112.[27]

3. Halliburton's Misrepresentations Regarding Asbestos Liabilities Affected the Market.

Plaintiff has demonstrated loss causation as to Halliburton's fraudulent misrepresentatives regarding its asbestos liability. Set forth below are each of the partial corrective disclosures, and the fraudulent misrepresentations to which they relate.

a) The Market's Reaction to Halliburton's Partial Corrective Disclosure on June 28, 2001 Demonstrates Loss Causation.

On November 15, 1999, Halliburton released its third quarter 1999 10-Q. In discussing asbestos litigation, the Company represented that it continued "to believe that

---

27. Ms. Nettesheim's conclusion regarding the October and December partial corrective disclosures is well-founded. Ms. Nettesheim noted that analysts were stunned (Nettesheim Rep. ¶ 107), because the news of the restructuring directly conflicted with Halliburton's prior class period assurances, that "[t]he merger with Dresser Industries is now behind us," and "[t]he potential rewards to our shareholders are vast," (FCAC ¶ 122), as well as Halliburton's class period assurances regarding its large fixed-price contracts, such as its false statements that "[a]ll known or anticipated losses on contracts are provided for currently," that revenue for extra work or scope changes is only booked "when collection is deemed probable." FCAC ¶ 124.

provisions recorded are adequate to cover the *estimated loss from asbestosis litigation*." FCAC ¶ 113.[28] At that time, Halliburton had reserves of a mere $13 million. FCAC ¶ 119. Similar representations about the adequacy of its merger reserves were made over the following several quarters as the amount of the reserves were slowly increased. FCAC ¶¶ 115, 119, 120.

On January 31, 2001, Mark Kellstrom of Jefferies reported that Halliburton's "management reiterated that ***the prospective asbestos liabilities had not changed*** materially from the third quarter and *should have minimal adverse impact on the company going forward.*" FCAC ¶ 157. On April 25, 2001, Halliburton reported an outstanding quarter, reporting $0.25 per share. At that time, Halliburton increased its reserve for asbestos liability to a mere $29 million. FCAC ¶ 160. On May 11, 2001, Halliburton increased its asbestos reserves just an additional $1 million to $30 million. FCAC ¶ 166. Each quarter, Halliburton assured the market that its asbestos reserves were "adequate" and would not adversely impact the Company.

As alleged in the Complaint, these statements were false and misleading because Halliburton had not adequately reserved for its potential asbestos liabilities for

---

28. Defendants' position that the Company's representations regarding asbestos were limited to "pending claims" is belied by the language of misrepresentations and the allegations of the Complaint. The Complaint alleges that among other things, Halliburton knowingly misrepresented its aggregate asbestos exposures, not just its exposure for pending claims.

future as well as current claims, and should have known that the ultimate resolution of its asbestos claims would materially adversely impact Halliburton's balance sheet. FCAC ¶ 168. Moreover, as a result of Halliburton's failure to properly reserve for its asbestos liabilities, Halliburton violated SFAS No. 5, and overstated its earnings for the entire class period. FCAC ¶¶ 237-238.

On June 28, 2001, in a conference call with analysts, Lesar and Morris stated that the "worse case scenario" would be exposure, after insurance, of $50 to $60 million – not the $30 million that they had reported to be "adequate" the preceding month. This was the market's first inkling that Halliburton had a serious and deteriorating asbestos situation. Nettesheim Rep. ¶ 115, FCAC ¶ 170. As expected and intended, analysts reported on their discussions with Lesar and Morris. This partial disclosure caused a statistically significantly decline of 4.6% in the price of Halliburton stock. Nettesheim Rep. ¶ 114-118. Moreover, Ms. Nettesheim could find no other news that would have resulted in the price decline. *Id.* Accordingly, Plaintiff has established loss causation as to the January, April and May misrepresentations.

Defendants do not dispute that there was a statistically significant decline in the price of Halliburton stock and that there was no other news that could have caused that decline, key elements of loss causation. Instead, citing only its own self-serving press release, Defendants assert the purely merits-based argument that they did not know of the potential asbestos exposure prior to making the announcement. Def.'s Resp. at 29-30. Such assertions go

directly to the merits of the Plaintiff's claims, are not fundamental to resolution of the loss causation issue, and are inappropriate for resolution on class certification. *Allegiance*, 487 F.3d at 266-67.[29]

b) The Market's Reaction to Halliburton's Partial Corrective Disclosure on August 9, 2001 Demonstrates Loss Causation.

On July 25, 2001, Lesar and Morris held a conference call during which they boasted "another strong quarter" and stated that, based on their analysis of the Harbison claims, Halliburton thought it would be "prudent to accrue $60 million" to cover "potential exposure" for asbestos litigation. FCAC ¶ 175. Based on this call, as expected and intended by Halliburton, the analysts conveyed to the market that "the Company" believed that it had its asbestos situation "under control and that the financial impact should not be material to the financial health

29. The *Allegiance* court held that a merit-based inquiry was appropriate only in so far as it was necessary to resolve the loss causation issue. Defendants' unsupported factual assertions stray from the loss causation issue and go straight to the heart of Plaintiff's case. If such issues were to be resolved on class certification, substantial discovery would have been required. However, *Allegiance* specifically noted that "[l]ittle discovery from defendants is demanded by the fraud-on-the-market regimen." Rather, *Allegiance* directs plaintiffs and defendants to draw their "proof . . . from public data and public filings, as in this case." Defendants' repeated reliance on unsupported factual information which could only be tested through substantial discovery, flies in the face of this *Allegiance* directive. *Allegiance*, 487 F.3d at 267.

of the company." FCAC ¶¶ 176-77. That analyst also reported that "Mr. Lesar indicated that Halliburton maintains a significant amount of insurance that should cover the majority of any ***future claims or increases in the settlement rates.***" FCAC ¶ 177.

On August 9, 2001, Halliburton filed its second quarter 2001 10-Q in which it increased reserves for asbestos liability to $124 million – over twice the $60 million that, only two weeks prior, the Company had assured investors would be adequate. FCAC ¶ 178, Nettesheim Rep. ¶ 119. The market then became alerted to the fact that the Company's asbestos situation was not in fact "under control," and the price of Halliburton stock reacted immediately with a one day statistically significant decline of 5.2%. As explained by Ms. Nettesheim, this statement was "related to Halliburton's misstatements and omissions-specifically those concerning the significance of Halliburton's exposure to asbestos liabilities." There was no other news that could explain a company-specific stock price decline that day. Nettesheim Rep. ¶¶ 120-121. Accordingly, Plaintiff has established loss causation as to the January, April, May and July misrepresentations.

Defendants do not proffer any evidence to rebut Plaintiff's showing of loss causation. Defendants do not dispute that there was a statistically significant decline in the price of Halliburton stock or cite any other news that could have caused a company specific decline of 5.2%. Defendants only response to Plaintiff's showing of loss causation is the inappropriate merits based argument that "Halliburton's increase of its asbestos reserves . . . reflects

a change [] *sic* Halliburton's estimation of its liability on pending claims, and is no evidence of a corrective disclosure." Def.'s Resp. at 30-31.

c) The Market's Reaction to Halliburton's Partial Corrective Disclosure on October 30, 2001 Demonstrates Loss Causation.

On August 22, 2001, based on extensive discussions with Lesar and Foshee, Kieburtz of Salomon Smith Barney issued a comprehensive report on Halliburton, which, as expected and intended by Halliburton, conveyed to the market that "based upon available information, asbestos exposure concerns appear to be overblown." FCAC ¶ 180. Similarly, quoting Lesar, *Platt's* stated on September 4, 2001 that Halliburton had a "substantial amount of [insurance] coverage," and that the asbestos claims were a "manageable problem." FCAC ¶ 181.

On September 12, 2001, four days after the *Platt's* article, Halliburton learned that a jury had returned a $130 million verdict against it, yet Halliburton continued to conceal its potential for asbestos exposure and the effect that exposure would (and did) have on the Company. FCAC ¶ 182. On October 4, 2001, Foshee, on behalf of the Company, spoke at a Deutsche Banc Alex Brown seminar, and although "the presentation focused on better delineating and clarifying Halliburton's asbestos liabilities," Foshee did not disclose the $130 million verdict entered against it the prior month. On October 5, 2007, as expected and intended, an analyst who attended the

seminar reported that the market is "significantly over-discounting" the risks of asbestos liabilities. FCAC ¶ 183.

On October 23, 2001, Halliburton announced its third quarter 2001 results, boasting that they were "outstanding" and "record" breaking. At a conference call that same day, Foshee, on behalf of the Company stated that there was not "anything new to report on the Harbison-Walker." Lesar confirmed that ***"there have been no adverse developments at all with respect to the Harbison-Walker situation . . ."*** Neither Foshee nor Lesar made any mention of the $130 million verdict. FCAC ¶¶ 184-185.

Relying on the information provided by the Company, the analysts conveyed to the market that Halliburton's asbestos exposure was more of "a nuisance than a real risk to shareholder value" (Morgan Stanley); that "Management provided further assurances that current reserves are adequate to cover ***projected asbestos liabilities***" (Jefferies & Co); and that "the bottom line seems to be that Halliburton has minimal exposure" (CIBC World Markets). FCAC ¶¶ 186-188. Had Halliburton disclosed the $130 million verdict, Halliburton's asbestos exposure would not have been characterized as "a nuisance" or "minimal."

After the market closed on October 30, 2001, Halliburton announced that on October 26, 2001, a second Texas jury had returned a verdict of $150 million, of which Halliburton was liable for $21.3 million. Nettesheim Rep. ¶ 122. In response to this disclosure, on October 31,

2001, Halliburton's stock price had a company-specific, statistically significant decline of 4.9%, and on November 1, 2001, experienced a company-specific, statistically significant decline of 3.7%.[30] As explained by Ms. Nettesheim, this statement was "related to Halliburton's misstatements and omissions-specifically those concerning the significance of Halliburton's exposure to asbestos liabilities." There was no other news that could explain a company-specific stock price decline that day. Nettesheim Rep. ¶¶ 122, 124. Accordingly, Plaintiff has established loss causation as to the January, April, May, July, August, September and October misrepresentations.

Again, Defendants do not dispute that the declines of October 31 and November 1 were company specific, statistically significant declines that were not caused by any other news an important element of loss causation. Nor do Defendants provide evidence to rebut Plaintiff's showing of loss causation. Rather, they simply argue that Ms. Nettesheim "could not explain when or why Halliburton should have disclosed this information earlier." However, when Defendants' knew, or should have known, and should have reserved for potential large verdicts, goes to the merits of Plaintiff's claims, is not essential to the loss causation analysis, and thus, is not appropriate for resolution on a Motion for Class Certification. *Allegiance*, 487 F.3d at 267. Moreover, Plaintiff alleged that Halliburton concealed its true

30. As stated by Defendants' expert, a two-day event window, and even a five day event window may be appropriate absent an intervening material event. Allen Dep. at 141:17-23, 143:22-144:4, Pl. App. 106-107.

asbestos liability, and accordingly the likelihood of such adverse verdicts in these or similar cases.

d) The Market's Reaction to Halliburton's Partial Corrective Disclosure on December 7, 2001 Demonstrate Loss Causation.

On November 8, 2001, Halliburton filed it third quarter 2001 10-Q, which again stated that asbestos claims would be resolved without material adverse effect on Halliburton's financial position or the results of operations. FCAC ¶ 189. Thereafter, based on a conversation with the Company, Kieburtz of Salomon Smith Barney reported that the recent disclosures were the result a change in policy, not a deterioration of the asbestos situation, and concluded that "the market has fully discounted a very conservative (i.e., large) estimation of asbestos liability in the stock price." FCAC ¶¶ 188-189.

On December 4, 2001, Defendants' filed a Form 8-K which, in note 5, mentioned the recent Texas verdicts. The price of Halliburton stock began to decline from a close on December 3, 2001 of $22.06 to a close of $20.85 on December 6, 2001. Then, on December 7, 2001, the Company issued a release detailing all of the recent asbestos verdicts and making clear to the market that the $125 million in reserves, previously represented as "adequate," "prudent," and "conservative," were grossly inadequate and that the Company's asbestos exposure, previously represented to be "minimal," "a nuisance," and "manageable" was anything but. The market reacted

quickly and decidedly to this disclosure. The price of Halliburton stock collapsed from the December 6 close of $20.85 to as low as $10.94, and closed on December 7 at $12.00, a company-specific decline of 42.7%.[31]

The December price declines were "directly related" to the disclosures regarding [Halliburton's] asbestos exposure," and there was no other news that could explain the company-specific stock price decline that day. Nettesheim Rep. ¶ 132. Accordingly, as required by Fifth Circuit precedent, Plaintiff has established loss causation as to the January, April, May, July, August, September and October misrepresentations. Defendants' only response to Plaintiff's showing of loss causation is that Ms. Nettesheim "could not explain when or why Halliburton should have disclosed this information earlier," and that in any event the disclosure of the jury verdicts "corrects nothing." These issues, mischaracterize Plaintiff's claims, relate to the merits of Plaintiff's claims and not the showing of loss causation, and are not appropriate for resolution on a Motion for Class Certification.

---

31. Even absent any other evidence, the company specific loss of 42% experienced on December 7, 2001, when there was only the one piece of news regarding asbestos exposure, sufficiently shows loss causation such that "no evidence or analysis" is required. *Greenberg*, 364 F.3d at 669, (disclosure that revenue would be 66% below estimates sufficient to establish loss causation notwithstanding simultaneous release of non-culpable news without any "evidence or analysis").

Appendix D

CONCLUSION

Plaintiff has established loss causation as to the misrepresentations and omissions alleged in the Complaint under Fifth Circuit law. Defendants have presented no evidence that contradicts that showing, and indeed, as to the allegations relating to asbestos liabilities, Defendants have in essence conceded loss causation, relying solely on the merit-based position that the Company did not know its statements were false. Because Plaintiffs have established loss causation and that the proposed class representatives are typical and will adequately represent the class, Plaintiff's Motion should in all respects be granted.

REBUTTAL REPORT OF JANE D. NETTESHEIM

December 20, 2007

Appendix E

Table of Contents
[TABLE INTENTIONALLY OMITTED]

I, JANE D. NETTESHEIM, declare:

I. Background

1. I am a financial economist and vice president of Stanford Consulting Group, Inc. ("SCG"), which provides research, consulting, and expert services in financial economics and related areas to clients, including government agencies, corporations, and law firms. I have a B.A. in biology from the University of Colorado and an M.B.A. from the University of Hawaii, and I completed the coursework in the Ph.D. program in finance at the London Business School, University of London. My curriculum vitae and the list of the expert testimony I have provided by deposition or at trial are attached as Exhibit 1. The fees charged for this project are the standard hourly rates of employees of SCG. My current hourly rate is $475.

2. Previously in this matter, I submitted the Report of Jane D. Nettesheim, dated September 17, 2007 (the "Nettesheim Report"). In the Nettesheim Report I opined that the market for the common stock of Halliburton Company, Inc. ("Halliburton" or the "Company")[1] was efficient during the period June 3, 1999 through December 7, 2001, inclusive (the "Class Period"). Also in the Nettesheim Report, I conducted

1. Herein, "Halliburton stock" refers to the common stock of Halliburton.

an analysis of materiality and loss causation pertaining to the alleged misrepresentations and omissions in this matter, and concluded that the misrepresentations and omissions caused Halliburton's stock price to be inflated during the Class Period as evidenced by the partial corrective disclosures during the Class Period. Those corrective disclosures revealed information about Halliburton's financial condition, which Lead Plaintiff alleges in the Fourth Consolidated Amended Complaint (the "Complaint"), was previously misrepresented and/or omitted by Defendants, and which I determined caused the price of Halliburton's stock to decline.[2]

3. I now have been asked by Counsel to respond to Defendants' Joint Motion to Strike the Report of Jane Nettesheim, dated November 16, 2007 ("Defendants' Motion") and the Expert Report of Lucy P. Allen, dated November 16, 2007 (the "Allen Report").[3]

4. The opinions offered in this Rebuttal Report are subject to refinement or revision based on continuing analysis of the documents and materials listed below, as well as new or additional information which may be provided to or obtained by me in the course of this

---

2. Because discovery is just beginning in this action, the analysis in this Rebuttal Report and in the Nettesheim Report is preliminary and based on the public information available to me at this time. I assume that the allegations outlined in the Complaint are true.

3. I have also included in this Rebuttal Report certain related opinions on the deposition testimony of Lucy Allen, December 3, 2007 (the "Allen Deposition").

matter. I expect to review additional information and documents, including information and documents that may become available through discovery and the reports and depositions of other expert witnesses.

II. Bases for Opinions

5. My opinions expressed in this Rebuttal Report are based upon my review and analysis of documents and information relevant to this matter and also my professional knowledge and experience. Exhibit 2 lists the materials I have obtained from Counsel or other identified sources to date. The materials I have relied upon in forming my opinions in this Rebuttal Report are identified in this report and its Exhibits. Such documents and information are typically relied upon by financial experts in securities class actions or by financial economists in their research. I reserve the right to modify or supplement my opinions expressed herein in the event that further information becomes available to me.

III. Summary of Opinions

6. The criticisms contained in Defendants' Motion and the Allen Report primarily pertain to my event study analysis and my analysis of loss causation in this matter. In this Rebuttal Report, I address each of the issues raised by Defendants and Ms. Allen. Following is a summary of my conclusions:

- Contrary to Defendants' assertions, the event study methodology used in the Nettesheim Report is appropriate and fully consistent with the standards of my profession:

- It is the same method I have employed in other securities cases, it has been accepted by the courts, and it is recognized in relevant literature.

- My industry index captures the effect of industry trends on Halliburton. Defendants fail to demonstrate that the industry index used in the Nettesheim Report is not appropriate (nor do they suggest a meaningful alternative).

- The fact that approximately 5% of the days during the Class Period are statistically significant is not relevant to determining loss causation—whether there are more than or less than 5% of days with statistically significant stock price changes does not contribute to or detract from the statistical significance of those days.

- Ms. Allen erroneously claims I purported to distinguish between news and non-news days. Ms. Allen's assertion that Halliburton's stock price reaction on "news days" is no different that its reaction of "non-news days" is unfounded because, among other reasons, her classification of news days and non-news days is flawed and her statements regarding fundamental concepts of statistical significance are erroneous.

- Ms. Allen misleadingly claims that my market index analysis is not replicable when the alleged discrepancies are not only immaterial, but, in fact, *de minimis*, and are the result, not of an error in my analysis, but rather a change by a

third party data provider of the price of some stocks other than Halliburton during the Class Period.

- The control period used in the Nettesheim Report is more "robust" than that suggested by Ms. Allen, and is better suited for identifying dates of significant stock price movements during the Class Period.

- Loss causation has been established for each of the allegations in this matter.
  - Ms. Allen mischaracterizes my methodology.
  - The Nettesheim Report addresses each of the three categories of allegations identified by Defendants.
  - The misrepresentations and omissions have been adequately tied to the curative disclosures.
  - Each of the news items proffered by Defendants as being non-culpable on dates of curative disclosures is misleading, immaterial to company-specific movement in Halliburton's stock, and/or unrepresentative of the overall market consensus.

- Contrary to Defendants' contentions, loss causation is demonstrated by the decline in Halliburton's stock price upon the partial corrective disclosures during the Class Period. The absence of statistically significant stock price increases upon each date of

a misrepresentation or omission is not unexpected and does not undermine my conclusion that Halliburton's stock price was inflated during the Class Period.

- Ms. Allen's analysis of loss causation for Halliburton peer McDermott International, Inc. ("McDermott") is misleading, erroneous and irrelevant. Without any reasonable assumptions regarding allegations concerning McDermott, she has no basis for her conclusions regarding loss causation.

IV. Opinions

A. The Event Study Methodology Used in the Nettesheim Report is Supported and Reliable

7. In the Nettesheim Report, I conducted an event study analysis and demonstrated that the market for Halliburton stock was efficient during the Class Period.[4] Certain aspects of the event study were also useful for the purpose of establishing loss causation in this matter.[5] Defendants and/or Ms. Allen[6] argue that my event study

4. Nettesheim Report, Section VI.E. (entitled "*Cammer/Unger/Bell* Factor 5: Empirical Facts Showing a Cause-and-Effect Relationship between Unexpected Corporate Events or Financial Releases and an Immediate Response in the Stock Price") and Appendix (entitled "Regression Analysis and Event Study").

5. Nettesheim Report, ¶79.

6. Herein, arguments presented by Ms. Allen may be referred to generally as Defendants' arguments.

methodology "suffers" from the following "methodological flaws:"

- Defendants contend that my methodology is "fundamentally backwards" and "does not adhere to the standards of academic literature;"

- Defendants contend that my industry peer group is "improperly constructed;"

- Defendants contend that my test for market efficiency "does not use any statistical, consistent, or recognizable method properly to identify either what [I] categorize as company news or the release dates of that 'news';"[7]

- Ms. Allen contends that the number of statistically significant days is "no more than the number expected" thus, "yields no evidence that the stock price declines during the alleged class period are caused by anything other than the normal daily variation in stock price;"[8]

- Ms. Allen contends that "news days" and "non-news days" have the same distribution of excess returns;[9]

- Ms. Allen claims she was unable to replicate my market index;[10]

---

7. Defendants' Motion, p. 4.

8. Allen Report, p. 8–9.

9. Allen Report, p. 9.

10. Allen Report, p. 11.

- Ms. Allen contends my findings are not "robust" based on her analysis of an "alternative" control period.[11]

In what follows, I describe why Defendants' and Ms. Allen's arguments are flawed, misleading and irrelevant; and that my event study analysis is a reliable basis for my conclusion that the market for Halliburton stock was efficient and for establishing loss causation.

i. The Event Study Methodology Used in the Nettesheim Report Has Been Accepted by the Courts

8. Defendants contend that my event study methodology is "fundamentally backwards" and "does not adhere to the standards of academic literature." They allege that I "first" identify dates during the Class Period with statistically significant stock price movements and "only then" did I look for disclosures on those specific days.[12] This assessment of my analysis is wrong. Defendants have misleadingly characterized the *results* of the event study analysis presented in the Nettesheim Report as the sum total of the *process* used to arrive at the results and conclusions in the Nettesheim Report. Moreover, Defendants fail to acknowledge that the event study analysis serves two purposes in the Nettesheim Report: (1) to analyze whether the market for Halliburton stock was efficient during the Class Period, and (2) as a

11. Allen Report, p. 13.

12. Defendants' Motion, p. 4; Allen Report, pp. 5–6, 10.

tool for assessing loss causation—the results of the event study analysis are appropriately applied to each of these objectives.

The Event Study Process:

9. The event study process I employed began with a review of the Complaint to obtain an understanding of the allegations in the litigation and to identify dates with alleged partial disclosures.[13] I reviewed news articles and analyst reports related to the allegations

---

13. Nettesheim Deposition, pp. 16:14–17:2:

> Q. When you were retained in this case, how did you begin your work on the loss causation part of the engage meant?
>
> A. Well, at the very beginning, I read the complaint.
>
> Q. What did you do after that?
>
> A. Then I asked to have information and data gathered, for example, stock prices, data on market indices or a market index, data on competitor companies. I also had news reports, news headlines, analyst reports and those titles. I asked for those things to be gathered.

I noted in footnote 3 of the Nettesheim Report that I assumed that the allegations in the Complaint were true; thus it is clear that my analysis is based on the allegations in the Complaint and not on a narrow review of news and information published only on statistically significant residual return dates as Defendants suggest.

in the Complaint, especially around the alleged partial corrective disclosures. I also reviewed Halliburton's stock price to see, in a general sense, how it reacted on dates of alleged partial corrective disclosures. After this initial analysis of the allegations, news and information related to the allegations and a general review of Halliburton's stock price during the Class Period, I proceeded to do additional analyses relevant to the determination of the efficiency of the market for Halliburton stock and loss causation.[14]

The Event Study—Demonstrating Market Efficiency:

10. Market efficiency can properly be evaluated by means of event study analysis which analyzes all dates during the Class Period. Discussion of specific dates in the Nettesheim Report generally is limited to dates with statistically significant stock price changes (after netting out market and industry effects) because in litigation, dates on which material new information was released generally are the dates of interest. My analysis

---

14. Nettesheim Deposition, p. 18:8–19:

> Q. So how did you begin trying to ascertain the loss causation aspects of this case?
>
> A. After collecting the data, then we did statistical analyses which entailed forming an industry index, and after several steps, went through to form the industry index and did a regression analysis to determine the relationship between Halliburton and the stock returns and returns on a market index, industry index.

demonstrates that "[i]n general, large significant changes in Halliburton's stock price are associated with material, new and unexpected information about the Company."[15] This result supports my conclusion that the market for Halliburton stock was efficient, a conclusion Defendants do not challenge.[16]

11. Defendants wrongly assert that my methodology "does not remotely resemble those event studies endorsed by courts ...."[17] While the cases cited by Defendants[18]

---

15. Nettesheim Report, ¶42.

16. I note that my analysis of the efficiency of the market for Halliburton stock included ten "factors" other than *Cammer* Factor 5 (Empirical Facts Showing a Cause-and-Effect Relationship between Unexpected Corporate Events or Financial Releases and an Immediate Response in the Stock Price), none of which, to my knowledge, Defendants have contested. Namely, (1) *Cammer/Unger/Bell* Factor 1: Weekly Trading Volume; (2) *Cammer/Unger/Bell* Factor 2: The Number of Securities Analysts Following and Reporting on Halliburton; (3) *Cammer/Unger/Bell* Factor 3: The Number of Market Makers in Halliburton's Stock; (4) *Cammer/Unger/Bell* Factor 4: Whether Halliburton was Eligible to File SEC Form S-3; (5) *Unger/Bell* Factor 6: Market Capitalization; (6) *Unger/Bell* Factor 7: Bid/Ask Spread; (7) *Unger/Bell* Factor 8: Public Float; (8) Factor 9: Listing Exchange; (9) Factor 10: Institutional Ownership and Trading; and (10) Factor 11: Dissemination of News. (Nettesheim Report, Section VI.)

17. Defendants' Motion, p. 2.

18. *Id.*, p. 2:

> *See, e.g., In re Apollo Group Inc. Sec. Litig.*, 509 F. Supp. 2d 837, 844 (D. Ariz. 2007) ("The tool most often used by experts to isolate the economic losses caused by the alleged fraud is the 'event study.'"); *In*

indicate that an event study is required, the courts provide no further prescription as to how the event study should be done. The event study methodology I have employed in this matter is the same methodology I have employed in other securities litigation,[19] and it has been accepted by the courts.[20] This methodology also has been described in the relevant literature, for example:

---

re Oracle Sec. Litig., 829 F. Supp. 1176, 1181 (N.D. Cal. 1993) ("Use of an event study or similar analysis is necessary more accurately to [*sic*] isolate the influences of information specific to [the company] which defendants allegedly have distorted.").

19. I used the same event study methodology, in which I provided a report during the class certification phase of the litigation and the class was certified, in the *In Re Homestore, Inc. Securities Litigation*, United States District Court for the Central District of California, Western Division, Master File No. 01-CV-11115 RSWL CWx, and the *In Re Vivendi Universal, S.A. Securities Litigation*, United States District Court, Southern District of New York, 02 Civ. 5571 (RJH) (HBP).

20. For example, the same event study methodology was used by another expert in the *In Re WorldCom, Inc. Securities Litigation*, United States District Court, Southern District of New York, 02 Civ. 3288 (DLC). (The class was certified and the case proceeded to trial; the final settlement was reached during trial and therefore there was no verdict). Also, in the *In Re Enron Corporation Securities Litigation*, United States District Court, Southern District of Texas, Houston Division, Civil Action No. H-0103624 (Consolidated). (The class was certified by the district court but later reversed on appeal because in that particular case, "secondary actors (such as the investment banks involved in this case [which were the remaining defendants]) who act in concert with issuers of publicly-traded securities in schemes to defraud the investing public cannot be held liable as primary violators of Section 10(b) or Rule 10b-5.")

Appendix E

> An event study is a statistical regression analysis that examines the effect of an event on a dependent variable, such as a corporation's stock price. This approach assumes that the price and value of the security move together except during days when disclosures of company-specific information influence the price of the stock. The analyst then looks at the days when the stock moves differently than anticipated solely based upon market and industry factors—so-called days of "abnormal returns." The analyst then determines whether those abnormal returns are due to fraud or non-fraud related factors.[21]

The same article continues:

> The event study first would be used to eliminate all market and industry-related factors and determine those dates of "abnormal returns" when the stock price moved differently than would be expected. The analyst would then look at the disclosures on those days of abnormal returns and ascertain whether there was any information that reached the market that related to some aspect of the fraud. To the extent that no information related to the fraud had any impact on the share price through an

---

21. Eisenhofer, Jay W., Geoffrey C. Jarvis and James R. Banko, "Securities Fraud, Stock Price Valuation, and Loss Causation: Toward A Corporate Finance-Based Theory of Loss Causation," 59, *Business Lawyer*, pp. 1425–1426, August 2004.

> abnormal return, there would be insufficient linkage between the fraud and the share price and loss causation would not be shown. On the other hand, the existence of an abnormal return in conjunction with the release of information to the market that arguably is fraud-related should, in conjunction with a showing that the market price was inflated, be sufficient to let a trier of fact determine whether in fact the loss was caused by the fraud.[22]

Another article states:

> When a dispute or litigation requires an analysis of security price changes in response to a news disclosure, it is often appropriate to distinguish two related questions: (1) Does the price history establish that the disclosure caused any price reaction at all?, and (2) if so, what was the size and direction of the net price reaction to the disclosure alone, after accounting for the effects of other factors operating at the same time? This chapter describes a statistical approach, often referred as an *event study*, for analyzing these questions. (Emphasis in original.)
>
> In its most common form, an event study involves a statistical regression analysis of a time series of security returns, with the objective of identifying and measuring firm-

22. *Ibid*, p. 1445.

> specific effects of identifiable information releases (events).[23]

That article continues:

> The event study originated in academic research, so the conventional design features and assumptions of event studies fit academic research questions. They may not, however, fit litigation-based questions. ... [T]he analyst must develop approaches that fit the legal setting.
>
> Event studies may serve both to establish whether any effect occurred and to quantify the effect, if any, including the margin of error of the measured effect. In the former purpose, the question of *statistical significance* of firm-specific returns (abnormal returns or prediction errors) becomes fundamental. For the latter purpose, the magnitude of such returns becomes the basic input to the measurement calculation, and one can use statistical significance as an indicator of the confidence interval around the point estimate of the effect.[24]

Weil, Michael J. Wagner and Peter B. Frank, p. 17A-2.

24. *Ibid.* p. 17A-18–19.

Appendix E

The Event Study—Demonstrating Loss Causation:

12. Defendants contend that my methodology is "fundamentally backwards" because I purportedly first identified dates during the Class Period with statistically significant stock price movements and "only then did [I] look for any disclosures on those specific days."[25] Contrary to Defendants' assertions, I did not limit my analysis of events to those dates with statistically significant stock price changes. Although I examined dates on which alleged disclosures were made,[26] I did not limit my analysis to only those dates because I was asked to examine loss causation, *i.e.*, analyze Halliburton's stock price decline and determine whether any of the declines related to partial corrective disclosures of the misrepresentations and omissions alleged in the Complaint.[27] In fact, my discussion of loss causation in the Nettesheim Report includes events that occurred on dates without statistically significant stock price movements (such as the events of December 21, 2000 and December 6, 2001).[28]

---

25. Defendants' Motion, p. 4.

26. Nettesheim Report, ¶81.

27. Nettesheim Report, ¶3; Nettesheim Deposition, pp. 43:25–44:5:

> A. In the loss causation section, I was focusing on the combination of the determinants of the decline in the price and those declines that related to the allegations in the complaint.

28. Nettesheim Report, ¶127.

13. While a statistically significant stock price movement is not a prerequisite for an event to be considered material and/or relevant to loss causation,[29] in litigation, dates with large stock price changes generally are the dates that are of interest. A commonly used method for determining on which dates there were large stock price changes due to company-specific news (rather than market and/or industry news) is the regression and analysis that identifies dates with statistically significant price changes. This is the method I used.

14. Defendants erroneously claim that I did "not perform the first required step [in an event study]—identifying events or dates on which allegedly corrective

---

29. Nettesheim Report, ¶73. Also:

> The Court [in *TSC Industries, Inc. v. Northway, Inc.*, 426 U.S.438 (1976)] held that a fact is material if there is a "'substantial likelihood' that a reasonable investor would consider it important in his or her decision making." ... The Court explained that, to fulfill the materiality requirement, "there must be a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available." ... In other words, "materiality depends on the significance the reasonable investor would place on the withheld or misrepresented information."
>
> *No. 84 Employer-Teamster Joint Council Pension Trust Fund v. America West Holding Corp.*, 320 F.3d 920, 934 (9th Cir. 2003).

disclosures by Halliburton reached the market."[30] On the contrary, I reviewed the Complaint, information related to the alleged partial corrective disclosures, and looked at Halliburton stock prices for the very purpose of identifying such dates. I discussed certain dates that were alleged in the Complaint as partial corrective disclosures, specifically: October 24–25, 2000; December 21–22, 2000; June 28–29, 2001; and December 7, 2001.

15. I also identified other dates of possible partial corrective disclosures because I examined the news and information that was available to me about Halliburton during the Class Period. The purpose of the loss causation analysis is to determine whether the alleged fraud caused the loss. Thus, the discussion in the Nettesheim Report (although not my analysis) was logically limited to dates with large downward stock price movements that were associated with information and news about Halliburton that were partial corrective disclosures of the alleged fraud.

16. Defendants refer to the "Texas sharpshooter fallacy" and misleadingly imply that I attribute all of the significant declines in the stock price to the fraud. This statement is untrue as I attributed only 11 dates out of the 22 dates with statistically significant stock price declines to partial corrective disclosures.

17. Thus for all of the reasons described above, my event study methodology and results are relevant and reliable.

---

30. Defendants' Motion, p. 4.

18. Defendants claim that the industry index in the Nettesheim Report was not properly constructed; they cite to cases where a properly constructed industry index is described.[31] Defendants cite to *Carpe v. Aquila*

---

31. Defendants' Motion, pp. 5–8. I note that despite her criticisms of my industry index, in her deposition testimony, Ms. Allen suggests that a valid analysis of loss causation may be conducted without any industry index or market index:

> Q. If you going [*sic*] to do what you are refer to as a real event study or statistical analysis, would you want to control both for movement in the market generally and for movement in the industry?
>
> A. I think it depends, so oftentimes if you're controlling for movement in the industry, the industry itself is affected by the market so you really are effectively controlling for movement in both the market and the industry, I don't think it's a big difference, I think it's fine to separately put in a market index and I also thinks [*sic*] it's appropriate to not put in a market index and it's okay to use sort of a peer or industry index. There are always exceptions and you want to be mindful of in fact what is going on and look to see if there was something else important at the time. So you can't sort of blindly follow a set of paths and not look at other information that's out there.
>
> Q. Would you always want to have an industry index if you were going to do what you refer to as a real event study or a statistical analysis?

for the proposition that an event study should compare "the stock's price to the market as a whole or a selected index of similar businesses," which is exactly what I did. I compared Halliburton's stock price returns to a

---

> A. I think can you do a statistical analysis without an industry index.
>
> Q. Can you distinguish between a statistical analysis and what you refer to as an event study?
>
> A. I think an event study is a kind of statistical analysis.
>
> Q. So you can do an event study appropriately without having a market index is that what you're saying?
>
> A. I think can you do one without a market index and I think can you do one without an industry index. (Allen Deposition, pp. 152:11–153:13.)

A NERA Economic Consulting (the firm at which Ms. Allen works) paper by Tabak, David. I, and Frederick C. Dunbar, "Materiality and Magnitude: Event Studies in the Courtroom," in Litigation Services Handbook, The Role of the Financial Expert, Third Edition, 2001, edited by Roman L. Weil, Michael J. Wagner and Peter B. Frank, footnote 19 states:

> While some crude event studies are performed without adjusting for market effects, the literature nearly uniformly argues that a market adjustment is desirable. Moreover, there is relevant case law, such as *In Re Executive Telecard Ltd. Securities Litigation*, which states that in measuring stock price declines, one must eliminate "that portion of the price decline that is the result of forces unrelated to the wrong."

market index comprised of all stocks' returns on the New York Stock Exchange, American Stock Exchange, and the NASDAQ, which is the most broad-based index for the U.S. stock market. I also compared Halliburton stock price returns to an industry index of more than 50 companies that were characterized by market participants as in similar businesses as Halliburton.

19. Defendants also cite to *In re Executive Telecard, Ltd. Securities Litigation* for the proposition that the industry index should be "a more precisely correlated portfolio of securities."[32] Again, this is exactly what I did. Defendants misleadingly and erroneously claim that my industry index did not "represent and 'correlate' to the industry in which [Halliburton] actually operates."[33] They are either purposely disingenuous or did not read the Nettesheim Report where I explained in detail how the industry index I used was created, using the type of methodology Defendants cite as appropriate. Defendants may disagree with some of the companies that were or were not included in the industry index, but regardless, the industry index represents the industry in which Halliburton operated and the residual returns on the industry index were correlated with Halliburton stock price returns.

---

32. Defendants' Motion, p. 6.

33. Defendants' Motion, p. 7.

Appendix E

The industry index represents the industry in which Halliburton operated:

20. I considered a company for the industry index if the company was considered by market participants[34] to be comparable to Halliburton. I used eight industry indices that included Halliburton and that were created by data providers (*e.g.*, Standard & Poor's, FactSet, Bloomberg); if a company was included in at least four of the eight indices, I considered it for inclusion in the industry index. Companies identified in analyst reports during the Class Period as comparables or competitors of Halliburton were considered for the industry index as well.[35] Ultimately, I considered 72 companies for the industry index and included 52 companies.[36]

---

34. Market participants refer to contemporaneous analysts and data providers during the Class Period. Data providers include entities that create industry indices from various companies that are in the same or similar industries and include entities such as Bloomberg, FactSet, and Standard & Poor's. These data providers are regularly used by economists, academics, investors and many others.

35. Nettesheim Report, Appendix ¶5.

36. Nettesheim Report, Exhibit 16. Of the 72 companies considered, I excluded companies if their residual stock price returns were not statistically significantly correlated to Halliburton's stock price return, if the company was subject to securities litigation during the control period or the Class Period, or if there was no stock price data available during the control period or the Class Period.

Appendix E

21. Bloomberg has a service that identifies all of the indices in which a particular company is included. Halliburton is included in industry indices related to oil and gas or energy services and equipment. There is no index described as engineering and construction that includes Halliburton. The relevant industry indices I used to obtain companies that were comparable to Halliburton were oil and gas and energy services and equipment industry indices.[37] Thus, my search for comparable companies for the industry index was appropriate and comprehensive.

The residual returns on the industry index[38] *were correlated with Halliburton stock price returns:*

22. Of the 72 companies considered for the industry index, I used only those companies whose stock price returns had some explanatory power with respect to Halliburton's stock price returns (*i.e.*, each company's residual stock price returns were correlated with Halliburton's stock price returns). If a particular company's stock price returns had no explanatory power with respect to Halliburton's stock price returns, then there is no reason to include it in the industry index or in the final regression analysis—including such variables will not assist in identifying company-specific stock price movements.[39]

---

37. Nettesheim Report, Appendix ¶5, Appendix footnote 6.

38. Because a market index also was used in the regression analysis, the industry returns net of market effects, *i.e.*, industry index residual returns, were used.

39. I have examined the impact of including the non-significant companies in the industry index by adding to my industry index

Appendix E

23. Defendants allege that I "pre-selected companies" for my industry index.[40] This statement is misleading and erroneous. First, Defendants claim that my industry index was not correlated with Halliburton (see paragraph 19 above), then they assert that including competitor and comparable companies in an industry index based on whether they have a statistically significant correlation with Halliburton is "cherry-picking." In examining loss causation, the regression analysis is used to determine the portion of Halliburton stock price returns that are due to the market and industry returns with the remaining portion of the return due to company-specific events. The methodology I followed does that and is appropriate and correct in this case.[41]

---

the five non-significant companies, and the one company (Seitel) that was excluded from my index because it was subject to a class action securities litigation that alleged fraud during part of the Class Period. The r^2 is 77% in the Nettesheim Report, compared to 77% using the new index that includes these six companies. The standard error is 0.01725 in the Nettesheim Report, compared to 0.01739 using the new index. The beta coefficient on the industry residual is 1.03 in the Nettesheim Report, compared to 1.06 using the new index. Each of the curative disclosures that have statistically significant stock price declines in the Nettesheim Report, also have statistically significant stock price declines using the new index; and there is no material difference in the company-specific returns on each of these dates of curative disclosures.

40. Allen Report, p. 13.

41. *See, e.g.*, Tabak, David I., and Frederick C. Dunbar, "Materiality and Magnitude: Event Studies in the Courtroom," in Litigation Services Handbook, The Role of the Financial Expert, Third Edition, 2001, edited by Roman L. Weil, Michael J. Wagner and Peter B. Frank, p. 19.8, which indicates that statistical significance is one of the important considerations when constructing an index:

Appendix E

24. Defendants and Ms. Allen contend that my industry index "is not constructed properly" because it "does not adequately account for the negative E&C trend experienced industry-wide or the effects of the asbestos litigation."[42] Ms. Allen ignores the fact that my industry index does include, in addition to McDermott (which Ms. Allen concedes is an E&C company), several companies

---

The second consideration in selecting an index relates to how the company's stock price movements relate to those of the index during the estimation window. When the estimation regression is run, one of the statistics generated is the adjusted R-squared. This statistic measures the strength of the relationship between the variable being explained (the company's stock price movements) and the combined set of independent variables (the market and industry indices) that are being used to do the explaining. The higher this statistic, the stronger the relationship. Another relevant statistic is the t-statistic associated with each independent variable; this statistic measures the strength of the individual independent variable's correlation with the company's stock price. The farther the t-statistic is from zero, the stronger the relationship. While one should not use either the adjusted R-squared or t-statistics as a blind measure for the comparison of the explanatory power of different indices, an expert should be prepared to provide these statistics. Moreover, if the expert chooses one index with less statistical explanatory power than a second index, he or she should be prepared to defend this choice.

42. Defendants' Motion, p. 8.

that have E&C business segments.[43] Ms. Allen's definition of the E&C industry is based on only three companies identified in one analyst report issued over one year prior to the start of the Class Period.[44] Unlike Ms. Allen, I did

---

43. For example, according to Reuters (www.reuters.com/finance/stocks, "Full Company Description"), the following companies, which are included in the industry index in the Nettesheim Report, have engineering and construction business segments: *Helix Energy Solutions Group* "provides services in support of offshore oil and natural gas infrastructure projects involving the construction and maintenance of pipelines, production platforms, risers and subsea production systems in the Gulf of Mexico;" *Global Industries Ltd.* "is an offshore construction company offering a range of marine construction and support services in the United States Gulf of Mexico, Latin America ...;" *Nabors Industries Ltd.* "offers a range of ancillary well-site services, including engineering, transportation, construction, maintenance, well logging, directional drilling, rig instrumentation, data collection and other support services in selected domestic and international markets;" *Cameron International Corp.*, "the V&M segment also provides aftermarket services, including original equipment manufacturer (OEM) parts, repair, field service, asset management and remanufactured product to customers. V&M's primary customers include oil and gas majors, independent producers, engineering and construction companies, pipeline operators, drilling contractors and major chemical, petrochemical and refining companies;" and *TransCoastal Marine Services* "is a marine construction company with worldwide operations onshore, in the transition zone and offshore ...."

44. These three companies are McDermott International Inc. (which was included in my industry index), Foster Wheeler Ltd. ("Foster Wheeler") and Jacobs Engineering Group Inc. ("Jacobs Engineering").

not limit my search for comparable companies to a single analyst's report published more than one year prior to the start of the Class Period.

25. One of the E&C companies suggested by Ms. Allen was included in the industry index used in the Nettesheim Report. Inclusion of the other two purported E&C industry peers suggested by Defendants in my industry index does not materially alter my results. The residual stock price returns of those two purported E&C peers were not statistically significantly correlated with Halliburton stock price returns when tested during the control period, *i.e.*, the two purported peer companies do not have explanatory power with respect to Halliburton stock price returns.[45]

26. Defendants also claim that I ignored the downturn in the "entire" E&C industry from June 3, 1999 to December 20, 2000, by not including two of the three companies in my industry index. Actually, one of the two companies not included in the industry index (Jacobs Engineering) experienced an upturn.[46] That one of the three companies experienced an upturn disproves

---

45. The control period in the Nettesheim Report and used here is October 1, 1998 through September 30, 1999. As in the Nettesheim Report, each company's stock price returns, net of market returns, which are the residual returns, were used in the test of whether the company's stock price returns explained Halliburton stock price returns.

46. That one of the three companies experienced an upturn disproves Defendants' statement that "the entire E&C industry experienced negative trends." Defendants' Motion, p. 8.

Defendants' statement that "the entire E&C industry experienced negative trends."[47] The third company, McDermott, was included in my industry index and did experience a downtown from June 3, 1999 to December 20, 2000. Thus, I did incorporate a representative company that experienced a downturn in the industry index. The inclusion of two other companies, one of which was up and one of which was down, would have no material impact on the overall industry index used in the Nettesheim Report. Even with those two companies, the regression analysis shows that *all* the partial corrective disclosure dates for the failed Dresser merger and the long-term, fixed price contract are still statistically significant.[48]

27. Ms. Allen further argues that over the period June 3, 1999 through December 22, 2000 (the beginning

---

47. Defendants' Motion, p. 8.

48. I have examined the impact of including the two E&C companies proffered by Ms. Allen in my analysis. The r^2 is 77% in the Nettesheim Report, compared to 73% including these two companies. The standard error is 0.01725 in the Nettesheim Report, compared to 0.01859 including these two companies. The beta coefficient on the industry residual is 1.03 in the Nettesheim Report, compared to 1.19 including these two companies. Each of the four curative disclosures pertaining to allegations related to the integration of Dresser or the accounting for unapproved claims that have statistically significant stock price declines in the Nettesheim Report, also have statistically significant stock price declines when adding these two companies to the analysis. The residual returns on these dates of curative disclosures, October 5, 1999 January 5, 2000, October 25, 2000 and December 22, 2000, are 9.0%, 4.3%, 6.6% and 3.9% in the Nettesheim Report, compared to 9.0%, 4.2%, 6.2% and 4.2%, respectively.

of the Class Period through the latest curative disclosure related to the Dresser integration), an equal-weighted index comprised of three purported E&C companies, dropped 39.53%, while Halliburton dropped 13.25%. She concludes that this is evidence that "the decline in the E&C business over this time period was not a Halliburton-specific phenomenon."[49] Even assuming these stocks were fully representative of the E&C industry, it is inappropriate for Ms. Allen to critique my analysis of loss causation by simply comparing the stock price of these companies to Halliburton's stock price over this entire period. My analysis of loss causation in regards to the allegations pertaining to the Dresser integration and accounting for unapproved claims focuses on four specific dates of curative disclosures. The stock price of the three E&C companies proffered by Ms. Allen did not drop or dropped significantly less than Halliburton's stock price on those corrective disclosure dates (see chart below). The only company of the three to experience a net decline over these four corrective disclosure dates is McDermott, which is included in my industry index:[50]

---

49. Allen Report, p. 19.

50. I also examined the impact of using the three E&C companies proffered by Ms. Allen as the industry index. In the Nettesheim Report, Halliburton stock's residual returns on the four corrective disclosure dates (October 5, 1999, January 5, October 25, and December 12, 2000) are: -9.0%, -4.3%, -6.6% and -3.9%, respectively. Keeping all else equal, Halliburton stock's residual returns using the three E&C companies proffered by Ms. Allen as the industry index are: -13.2%, -4.4%, -8.6% and -6.3%, respectively. In other words, using the E&C companies proffered by Ms. Allen as the industry index results in greater company-specific declines on the dates of curative disclosures than the index used in the Nettesheim Report.

Date of Corrective Disclosure Regarding Dresser Integration and/or Unapproved Claims	Actual Stock Price Return on Date of Corrective Disclosures			
	Foster Wheeler	Jacobs Engineering	McDermott	Halliburton
October 5, 1999	-0.53%	2.45%	-4.27%	-13.21%
January 5, 2000	-0.69%	0.59%	3.57%	-4.38%
October 25, 2000	-2.68%	-3.02%	-8.07%	-10.96%
December 12, 2000	7.69%	2.18%	4.00%	-2.70%
Net 4 Day Change	3.53%	2.12%	-5.21%	-28.11%

Appendix E

It is inappropriate to include "asbestos" companies in the industry index:

28. Defendants fail to identify any company that was not included in the Nettesheim industry index that would better "reflect the asbestos litigation." The allegations in the Complaint regarding asbestos concern company-specific problems for Halliburton. The allegations are that Halliburton should have determined and disclosed a reasonable estimate for its asbestos liability, including from conduct dating back many years. In this case, Plaintiffs do not allege that the issue of asbestos litigation and liability was an industry-wide problem that was misrepresented to Plaintiffs; rather Plaintiffs allege that Halliburton misrepresented its own liability.

iii. Stock Prices Move in Response to Information

29. As the Nettesheim Report clearly states, stock prices move in response to information:

> A security price movement of any size can be material. Statistical significance measures the relative size of the security's price adjustment to the new information, *i.e.*, statistical significance only indicates that the price change was among the largest price changes over a period of time. Information that does not cause a very large price adjustment, *i.e.*, one that is not statistically significant, also can be material. Price changes are caused by information;

> the market is not a collection of whimsical expressions of an irrational force. Price changes may appear random because new information arrives randomly, *i.e.*, we cannot predict the future. Nevertheless, those price changes have causes.[51]

30. Defendants claim that the analysis in the Nettesheim Report "assumes that 5% of the time, a 'statistically significant' movement will occur for no identifiable reason purely as a function of the normal fluctuation in stock prices."[52] This is an egregious mischaracterization of the Nettesheim Report and is fundamentally incorrect. As Mitchell and Netter point out,

> Information allegedly used in fraudulent activity that is important enough to affect security prices when publicly released provides compelling evidence that a reasonable investor would consider the information important in making an investment decision.[53]

31. Statistical significance of residual (company-specific) returns helps to identify those instances when the change in the stock price is relatively large, indicating

---

51. Nettesheim Report, ¶73.

52. Defendants' Motion p. 5.

53. Mitchell, Mark L. and Jeffry M. Netter, "The Role of Financial Economics in Securities Fraud Cases: Applications at the Securities and Exchange Commission," *Business Lawyer*, 49, February 1994, p. 549.

that the new information materially changed the mix of information available to the public, and the stock movement was not caused by market and industry effects.

32. In statistics, a result is called statistically significant if it is unlikely to have occurred by chance. The significance level of a test is the probability of making a decision to reject the null hypothesis when the null hypothesis is actually true (*i.e.*, to make a decision that the residual return was not due to chance when it actually was due to chance). In this case, we posit that on each day of the Class Period, Halliburton's stock price return will be equal to its predicted stock price return.[54] If Halliburton's stock price return is different from its predicted return,[55] the test determines whether this difference is large enough that it is unlikely to have occurred by chance. The level of significance used in the Nettesheim Report was 5% (which corresponds to a 95% confidence level). If the probability is less than 5% that the difference is due to chance, then the null hypothesis is rejected, *i.e.*, we are more than 95% confident that the difference (the residual return) is not due to chance. This means that the relatively large residual return cannot be explained by market and industry effects and is due to other events, *i.e.*, company-specific events.

---

54. The predicted return is based on the regression analysis specified in the control period, *i.e.*, Halliburton's predicted stock price return given the market return and industry index return.

55. This difference between the actual stock price return and the predicted stock price return goes by a variety of names: "company-specific return," "excess return," "residual return," "abnormal return."

Appendix E

33. Ms. Allen contends that the number of statistically significant days is "no more than the number expected" and thus, "yields no evidence that the stock price declines during the alleged class period are caused by anything other than the normal daily variation in stock price."[56] This statement is misleading and erroneous.

34. Ms. Allen's assertion that one would expect 5% of the days during the Class Period to be significant would only be true if the control period is the same as the Class Period.[57] The control period used in my event study analysis is a one-year period from October 1, 1998 through September 30, 1999. The fact that approximately 5% of the days during the Class Period are statistically significant is not relevant—whether there are more than or less than 5% of days with statistically significant stock

---

56. Allen Report, p. 8–9.

57. In this case, most of the Class Period lies outside the control period. If the relationship between Halliburton stock price returns and market and industry residual returns changed substantially between the Class and control period or the volatility of Halliburton stock changed substantially between those periods, then the number of statistically significant stock price returns would not necessarily be 5% of the number of days in the Class Period. As discussed below, the alternative control period proffered by Ms. Allen occurs after Halliburton had restructured its E&C businesses, and after Halliburton had made a number of significant partial disclosures regarding its asbestos liability. These factors may have altered the relationship between Halliburton stock price returns and market and industry residual returns, and/or increased the volatility of Halliburton stock—thus explaining why she finds only two significant dates during the Class Period.

price changes does not contribute to or detract from the statistical significance of those days.

35. Moreover, these are company-specific returns—not merely "normal daily variation in stock price." Statistical significance in an event study indicates that the change in the stock price was almost certainly not due to market and/or industry effects only and that it is more probable than not that the residual return was caused by company-specific information.

36. This method for identifying statistically significant stock price movements has been the predominant method used by myself and other financial economists during the many years which I have been involved in securities litigation.

iv. Analysis of Halliburton's Stock Price Reaction to News Events is "Consistent" and Based on Statistical Techniques

37. In the Nettesheim Report, I provide a comprehensive discussion of the news released around days of statistically significant stock price movements and I provide my conclusion as to what news caused the stock price movement for each of those dates.[58] However, Defendants misleadingly state "there is no method to [my] classification of news days and non-news day."[59] It is not possible to obtain at this time all of the news that was available to market participants during the Class Period;

58. Nettesheim Report, ¶¶43–45.

59. Defendants' Motion, p. 9.

for example, I know that I have do not have First Call reports or all of the analyst reports that were published during the Class Period. Furthermore, there very likely are other types of relevant information about Halliburton that was of interest and available to market participants during the Class Period that we will never know existed. Thus, to segregate days during the Class Period into "news days" and "non-news days" is a meaningless exercise at this time. Certainly, we can determine that particular days had news about Halliburton, but for those days that Defendants would label as "non-news days" it may be the case that at this time we merely are unable to find news about Halliburton.

38. Defendants erroneously assert that I misclassify the news on two events dates, December 22, 2000 and October 31, 2001. For the December 22, 2000 date, I am not relying on news released on December 21, 2000, as Defendants suggest. Rather, I am relying on additional analyst commentary from December 22, 2000 related to the restructuring charge announced on December 21, 2000.[60]

39. Defendants claim without any documentary support that the news I cite for October 31, 2001, "was released at least as early as October 28, 2001 (a day on which I do not find a statistically significant price change)."[61] The important news on October 31, 2001 (published after market close on October 30), are reports

60. Nettesheim Report, ¶¶106–112, and Exhibit 6, p. 5.

61. Defendants' Motion, p. 10; Allen Report, p. 15. October 28, 2001 is a Sunday and there is no stock price return for that date.

about the jury verdict against Halliburton in an asbestos trial in Mississippi. Although the verdict was rendered on Friday, October 26, I could not find a news report on the verdict before October 30.

40. On the days of significant movement in Halliburton's stock price for which no news or analyst coverage has been found to date, it is not necessarily the case that there was no important or material "news." Even so, material news pertaining to Halliburton was released on most of the days for which there was statistically significant movement in Halliburton's stock price. Certainly, on the dates when Plaintiff contends that there were partial disclosures of the fraud, there were large stock price changes and many news articles and analysts' reports.

v. The Analysis of News Related to Market Efficiency and Loss Causation in the Nettesheim Report is Appropriate

41. Defendants mischaracterize the analysis I undertook in the Market Efficiency (specifically with respect to *Cammer/Unger/Bell* Factor 5) and Loss Causation sections of the Nettesheim Report. Defendants point to nine dates on which the news available to me at this time does not explain the price movement, and then Defendants point to articles in Exhibit 18 to the Nettesheim Report on those dates as evidence of news regarding Halliburton.[62]

---

62. Defendants' Motion, p. 9; Allen Report, p. 14. Exhibit 18 to the Nettesheim Report is a list of news articles for each day of the Class Period that contains the word "Halliburton" in the title or lead paragraph.

Appendix E

42. In the Nettesheim Report, I noted that on four of the nine days Halliburton's stock price return was relatively small. Therefore, it is not surprising that I could find no news. The company-specific returns were statistically significant only because there were large market and/or industry index returns on those dates. While Halliburton stock price returns were correlated with returns on market and industry residual indices, they were not perfectly correlated—thus, it is not unexpected that Halliburton's stock price did not move with the market and/or industry on certain dates.

43. For the other five dates, the news available to me at this time does not explain the relatively large price movement in Halliburton stock.[63] I did not say there was nothing in print about Halliburton on those dates, as Defendants suggest, only that the news available at this time did not explain the relatively large stock price movements. News articles commonly repeat information already known by the market. The fact that there was an article published with the word "Halliburton" in it on a day I conclude there was no news that accounts for the relatively large change in the stock price return does not contradict my conclusions. One must conduct an evaluation of the content of such news (as I have done).

44. The news articles that Defendants point to as evidence of news about Halliburton for the five dates for which I conclude the news is not sufficient to explain

---

63. The five dates are: June 18, 1999, October 15, 1999, February 25, 2000, May 19, 2000, and November 6, 2001. (Nettesheim Report, ¶44.)

the relatively large stock price returns are as follows (company-specific return is in parentheses):

- June 18, 1999 (-4.1%): the article is merely a company profile report that summarizes information about a Halliburton subsidiary, *e.g.*, contact information, employees, turnover, assets.

- October 15, 1999 (-3.6%): the article repeated the earnings warning that Halliburton issued several days earlier. (The other article in Exhibit 18 for October 15, 1999, is about "Janet Halliburton" in the lead paragraph and is not about Halliburton Company.)

- February 25, 2000 (-3.6%): the article merely provides the date that Halliburton stock goes ex-dividend[64] and the amount of the dividend, neither of which could be new information as Halliburton paid regular dividends.

- May 19, 2000 (3.9%): the three articles refer to: (1) Brovig buying Halliburton's remaining 48% stake in Green Seas holding company for $6 million (this very small transaction is not mentioned elsewhere and appears relatively unimportant); (2) an oil rig off the Niger Delta where Halliburton is a contractor; and (3) Mr. Cheney heading Mr. Bush's vice presidential selection committee.

---

64. The day before a company goes "ex-dividend" represents the last day in which investors can purchase the company's stock and still collect the firm's next declared dividend payment.

- November 6, 2001 (-3.5%): MaverickTrader.Com announced stocks with price action in accord with rating; for Halliburton the rating was Underperform (there was no analysis and this type of cryptic report does not appear to be important or material, compared to, for example, reports by analysts from CIBC World Markets or Dain Rauscher Wessels, both of which wrote more comprehensive reports on Halliburton during the Class Period[65]).

45. None of the news articles on the five dates discussed above explain the relatively large company-specific stock price returns on those dates, and Ms. Allen does not claim otherwise.

46. In contrast to my approach, Ms. Allen's method for classifying dates as "News" and "Non-News" is arbitrary and is not based on *any* examination of the content of the news. Ms. Allen contends that the excess (or company-specific) returns on what she classifies as "News Days" and "Non-News Days" are "very similar" and thus that my "procedure is unreliable."[66] However, Ms. Allen's classification of days as "New Days" and "Non-News Days" is speculative. She fails to conduct any analysis of the content of the news released on days she categorizes as "News Days" to determine if the news was "new news" or merely reiteration of events already known by the market. Nor does she evaluate the significance of the news released

65. *See, e.g.*, Nettesheim Report, ¶86.

66. Allen Report, p. 10.

on "News Days." Thus, it is hardly surprising that she did not find a difference in the company-specific return on days she classified as "News" and "Non-News" days.

vi. The Market Index Used in the Nettesheim Report is Replicable

47. Ms. Allen claims that she was unable to identify my market index.[67] As explained in what follows, the difference between my market index and the one she was able to create are extremely small, and the differences in the two series of returns are so minor as to be meaningless and irrelevant, as Ms. Allen knew. The results are the same regardless of which series of market returns are used. Her criticism without acknowledgement in her report that these differences are minor at most is specious and implies errors and problems with the data and my analysis that do not exist. Since she implied that there were problems with my market index, it would have been appropriate for her to specify in the Allen Report the

---

67. Allen Report, p. 11. In her deposition (p. 169:4–15), Ms. Allen misleadingly suggests that, contrary to what I state in my report, I may not have used a market index:

> A. Yes, well, [Ms. Nettesheim] claims to use a market index. We were not able to find that market index. She claims it comes from Chris [*sic:* CRSP], we talked to [CRSP] but they don't think it came from them so—and she claims to use an industry index, I'm not sure what industry it is that it is an index of so it's not clear to me it's a market index or where it's from, it's not clear what industry it is an industry index of so I'm not sure I agree that she used a market or industry index.

extent of those problems and how large the differences in the data were. There was no indication in the Allen Report about the magnitude of the implied problem.

48. I have confirmed that the market index data used in the Nettesheim Report for the trading days in the Class Period is accurate. In the Nettesheim Report, I used a New York Stock Exchange/American Stock Exchange/NASDAQ ("NAN") market index that Stanford Consulting Group obtained a few years ago from CRSP, a data provider (since the Class Period ends in 2001, there was no need to obtain more recent data). When Ms. Allen stated that she could not replicate the market index, we re-ordered the NAN market index from CRSP. The re-ordered CRSP market index has returns that are almost exactly the same as the market index returns in the Nettesheim Report.[68] There is virtually no difference in the regression analysis using the re-ordered market index.

49. I have replicated the regression analysis in the Nettesheim Report using the CRSP market returns data that Ms. Allen relied upon and that was produced by defense counsel in this action subsequent to the issuance of her report. The differences between the returns that

---

68. On 619 days out of 633 days (there are 633 trading days from June 3, 1999 to December 7, 2001) the absolute values of the differences in the two series of returns are less than 0.01%; the returns are different by more than 0.01% and less than 0.02% (two-hundredths of one percent) on only 13 days out of 633 days and by 0.06% on one day out of 633 days. When I inquired about this difference, an analyst at CRSP said that over the years, they have made very minor edits to the data.

Ms. Allen used and the returns on the market index used in the Nettesheim Report are very small and meaningless. I replicated the regression analysis in the Nettesheim Report using Ms. Allen's market returns and the results are virtually identical.[69]

vii. The Control Period in the Nettesheim Report is Representative and Robust

50. Ms. Allen contends that my findings are not "robust" based on her analysis of an alternative control period—a one-year period that begins after the Class Period.[70] She is incorrect, my findings are "robust," as demonstrated below, and it is her alternative control period that is arbitrary and irrelevant.

51. It is important to select a control period that is representative of the company during the Class Period and with as little impact as possible from the fraud in determining the normalized relationship between a company's stock price returns and the returns on a market index and an industry index.[71] The control period I used is more highly correlated and representative of Halliburton stock price returns during the Class Period than the control period proposed by Ms. Allen.

---

69. The r^2 is 77% and the standard error is 0.01725 in both cases, and the statistically significant dates in the Class Period are exactly the same.

70. Allen Report, p. 13. She uses a one-year period from December 10, 2001 through December 9, 2002.

71. Nettesheim Report, Appendix, ¶3.

Appendix E

52. The control period I used was the one-year period October 1, 1998 through September 30, 1999 (the 1998–1999 control period). The final day of the control period was only five days prior to October 5, 1999, the first date discussed in the Loss Causation section of the Nettesheim Report regarding a partial corrective disclosure of the lack of benefits from the Dresser merger.[72] Thus, the control period is immediately prior to the first partial corrective disclosure and is a better choice of a control period than the control period advocated by Ms. Allen which is after the end of the Class Period and after Halliburton had restructured its E&C businesses, and as explained below, after Halliburton had made a number of significant partial disclosures regarding its asbestos liability.

53. I also examined the effect of choosing other control periods prior to other important disclosures during the Class Period. The results using these other control periods are very similar to the results in the Nettesheim Report (and different than Ms. Allen's results), demonstrating that the control period in the Nettesheim Report is "robust." For example, a control period of October 1, 1999 through September 30, 2000 (the 1999–2000 control period), produces a very similar result to the control period used in the Nettesheim Report. The 1999–2000 control period, while after the first disclosure regarding Dresser, is prior to the partial corrective disclosures in October 2000 that are discussed in the Complaint as the first major corrective disclosures regarding the operational problems with fixed price contracts in Halliburton's E&C businesses. The

72. Nettesheim Report, ¶¶84–87.

r^2 and standard error for the 1999–2000 control period are 76% and 0.01729, respectively (compared to an r^2 and standard error of 77% and 0.01725 in the 1998–1999 control period). There is the same number of statistically significant residual returns, 31, as from the 1998–1999 control period. The significant dates differ slightly.[73]

54. A control period of June 1, 2000 through May 31, 2001 (the 2000–2001 control period), produces a very similar result as the control period used in the Nettesheim Report. The r^2 and standard error for the 2000–2001 control period are 71% and 0.01575, respectively (compared to an r^2 and standard error of 77% and 0.01725 using the 1998–1999 control period). All of the significant dates using the 1998–1999 control period are statistically significant using the 2000–2001 control period.[74] The 2000–2001 control period is prior to the partial corrective disclosure in June 2001 discussed in the Complaint as the first major corrective disclosure regarding Halliburton's potential asbestos liability.

55. Ms. Allen's proposed control period is from December 10, 2001 through December 9, 2002 (the Allen

---

73. The following dates are significant for the 1998–1999 control period in the Nettesheim Report but were not significant using the 1999–2000 control period: October 27, 1999; January 12, 2000; February 25, 2000; October 23, 2000; November 1, 2001; November 6, 2001. Of these dates, November 1, 2001 is the only date I consider to be a curative disclosure with a significant stock price decline.

74. There are 19 additional significant dates using the 2000–2001 control period.

control period). During this time period, which is the one-year period following the end of the Class Period, material disclosures regarding the Company's asbestos litigation continued.[75] Also, certain Dresser subsidiaries obtained as part of the Dresser merger had been sold by then and Halliburton had been restructured such that it was a different company from what it was prior to the Class Period and different from what investors had expected at the start of the Class Period. These factors make Ms. Allen's control period less suitable than the control period used in the Nettesheim Report as a basis for an analysis of market efficiency and loss causation during the Class Period. These factors, which are unique to Ms. Allen's control period, may explain why Ms. Allen's results differ from my results and are consistent with my conclusion that it is Ms. Allen's analysis that is not "robust."[76] In fact, Ms. Allen concedes her alternative control period is not a better control period than the one I use.[77]

---

75. *See, e.g.*, Complaint, ¶¶50–51.

76. I also note that Ms. Allen fails to suggest any industry index, let alone one that would produce similar "robust" results using the proposed alternative control periods. (Allen Deposition, p. 170:19–23.)

77. Allen Deposition, pp. 211:25–212:8:

> Q. And did you believe that the one year control period after the class period ended was a better control period than the control period that Ms. Nettesheim used?
>
> A. No, so the reason I did it wasn't because I thought that was a better period. I thought that that was a way to illustrate that her results are not robust ...

56. Using Ms. Allen's proposed control period, Halliburton stock price returns are not "explained" well by market and industry returns, which results in a higher standard error in the residual returns during this later time period. Ms. Allen imposes this relatively high standard error measure on the residual returns during the Class Period, which, in turn, means that few dates in the Class Period have a statistically significant stock price movement. Her approach is strained and unnecessary because, as I have demonstrated above, Halliburton stock price returns were "explained" well by market and industry returns.[78]

B. Loss Causation Has Been Demonstrated for the Allegations in this Matter

57. Plaintiffs allege misrepresentations regarding (1) the integration of Dresser, (2) accounting of unapproved claims, and (3) asbestos liability.[79] In her report, Ms. Allen claims that I fail to establish loss causation for each of these three allegations for various unwarranted

---

78. Moreover, as stated in the Nettesheim Report, a statistically significant stock price movement is not a prerequisite for an event to be considered material and/or relevant to loss causation. (Mitchell, Mark L. and Jeffry M. Netter, "The Role of Financial Economics in Securities Fraud Cases: Applications at the Securities and Exchange Commission," *The Business Lawyer*, 49, 545, Nettesheim Report, ¶73.)

79. Lead Plaintiff's Motion for Class Certification and Incorporated Memorandum of Points and Authorities in Support Thereof, dated September 17, 2007 ("Lead Plaintiff's Motion") p. 3.

reasons.[80] Defendants further argue that my analysis of loss causation is flawed because I have "not provided the required empirical showing that some percentage of the stock price drop was attributable to the corrective disclosure." In what follows, I explain why Defendants' and Ms. Allen's arguments are flawed and that my analysis of loss causation shows that the partial disclosures related to the each of the three categories of allegations during the Class Period caused the price of Halliburton stock to decline, thus demonstrating loss causation.

i. Integration of Dresser

58. Ms. Allen puts forth the following arguments in order to dispute my analysis of loss causation for the allegations pertaining to the integration of Dresser:

- Ms. Allen states that I "inappropriately combine[] the allegations regarding the integration of Dresser with the allegations regarding the unapproved claims;"[81]

- Ms. Allen states that I wrongly look at whether stock price declines relate to E&C[82] and that I mischaracterize the underperformance of E&C

80. I note that Ms. Allen concedes that she has not conducted her own analysis of loss causation and is not opining as to whether there is loss causation in this matter. (Allen Report, p. 1; Allen Deposition, p. 83:18–22.)

81. Allen Report, p. 15.

82. Allen Report, p. 16.

as due to unrealized benefits from the Dresser merger;[83]

- Ms. Allen states that the alleged curative disclosures are not curative of alleged misrepresentations;[84]
- Ms. Allen states that I do not properly control for the E&C industry;[85]
- Ms. Allen states that there was non-culpable news on dates I determine are dates of curative disclosures.[86]

Each of these arguments is addressed below.

Allegations Regarding the Dresser Integration and Accounting for Unapproved Claims:

59. Ms. Allen argues that I "inappropriately combine[] the allegations regarding the integration of Dresser with the allegations regarding the unapproved claims."[87] The fact that I discuss the allegations related to the Dresser integration and the allegations related to Halliburton's accounting for unapproved claims in the same section of the Nettesheim Report is inconsequential. I recognize both of these allegations in the Nettesheim Report, and I demonstrate loss causation for each of

83. Allen Report, p. 20.

84. Allen Report, p. 17.

85. Allen Report, p. 18.

86. Allen Report, p. 22.

87. Allen Report, p. 15.

these allegations. I conclude that disclosures on January 5, 2000, October 24–25, 2000 and December 21–22, 2000 pertain to allegations related to both the Dresser integration and accounting for unapproved claims.[88, 89] I

---

88. Regarding January 5, 2000, the Nettesheim Report (¶92), states:

> The reductions in earnings estimates are based at least in part on the problems with the large fixed-price contracts and the lack of benefits from the Dresser merger. ... Thus, a significant portion of the stock price decline on January 5, 2000 was caused by information that partially corrected investors' erroneous assessments of the profitability of overseas construction projects and the benefits of the Dresser merger.

Regarding October 24–25, 2000, the Nettesheim Report (¶93) states:

> Thus, a significant portion of the stock price decline on October 25, 2000 was related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged in the Complaint.

Regarding December 21–22, 2000, the Nettesheim Report (¶112) states:

> As there was no other negative news released that day, all of the price decline on December 22 was caused by the partial disclosures related to the operational problems at the engineering and construction units and is related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged by Lead Plaintiff.

89. I discussed the decline in the price of Halliburton stock on December 21 as being related to these allegations; however, the decline on this date was not statistically significant.

conclude that disclosures on October 5, 1999 pertain to allegations related to the Dresser integration.[90] On only one of the four dates of corrective disclosures (January 5, 2000) do I find confounding non-culpable news that may have contributed to the decline in Halliburton's stock price—however, in the Nettesheim Report, I demonstrate that a substantial portion of the decline was related to the curative disclosures.[91] It is my understanding that when all of the news on a given day causing a change in the stock price is related to the allegations (*i.e.*, when there is no non-culpable news causing a change in the stock price), Lead Plaintiff is not required to attribute the cause of a decline among multiple culpable negative statements, and I have not been asked to do so in this matter.[92] Therefore, it is my understanding that Plaintiffs are not required to separate out the portion of Halliburton's stock price declines due to disclosures pertaining to the allegations regarding the Dresser integration from the allegations regarding the accounting for unapproved claims.

60. I also note that the allegations regarding the Dresser integration and the allegations regarding accounting for unapproved claims are inherently related. Among other things, the Complaint alleges that the Company's apparently favorable financial results due to accounting for unapproved claims were misleadingly

---

90. The Nettesheim Report (¶84) states "[October 5, 1999] is an instance where the Company released negative news, which concerned the lack of benefits arising from the Dresser merger."

91. Nettesheim Report, ¶¶88–92.

92. Lead Plaintiff's Motion, p. 22.

attributed by Defendants to successful restructuring of the Company upon the Dresser merger:

> Thereafter, Cheney and Halliburton's other top executives continued to conceal that they had secretly changed the manner by which Halliburton accounted for Unapproved Claims. They told investors that the favorable financial results of Halliburton's construction operations were due to their "successful consolidation and restructuring" and, when negative industry conditions emerged, that the "benefits of [Halliburton's] ... restructuring activities allowed [them] to remain profitable during this most difficult period." Halliburton said that the integration of Dresser's and Halliburton's construction operations had been "particularly effective" and had resulted in "strength in all facets of construction and project management." They also told investors that the "keys" to improving Halliburton's "profit margins ... will be ... acceptance of more fixed-price contracts" and "reiterated their confidence in the integrity (*i.e.*, margins)" of Halliburton's construction backlog.[93]

The Dresser Integration and E&C:

61. Ms. Allen accuses me of attributing "any negative news that relates to E&C" to corrective disclosures

---

93. Complaint, ¶14, emphasis removed.

related to the integration of Dresser.[94] She cites October 25, 2000 as an example.[95] This is not true. I did not arbitrarily select October 25, 2000 as a curative disclosure date as Ms. Allen suggests. The curative disclosures of the allegations related to the Dresser integration cited in the Nettesheim Report (including October 24–25, 2000) are disclosures of the operational problems and cost overruns at the Company's engineering and construction units that resulted from the lack of benefits from the Dresser merger that are alleged by Lead Plaintiff. The events of October 24–25, 2000 and their relationship to the allegations regarding the Dresser integration (as well as the allegations regarding cost overruns and accounting for unapproved claims) are discussed extensively in the Complaint, as well as in the Nettesheim Report.[96]

62. Moreover, at issue (among other things) is the allegedly unsuccessful integration of Dresser's construction unit (M. W. Kellogg) with Halliburton's Brown & Root engineering and construction operations, which, together, formed Halliburton's Kellogg Brown and Root—one of two divisions of Halliburton's Engineering and Construction Group.[97] M. W. Kellogg comprised a

---

94. Allen Report, p. 16.

95. *See, e.g.*, Complaint ¶¶144–147. October 25, 2000 is a date I conclude contains disclosure related to both the integration of Dresser to accounting for unapproved claims. Defendants' criticisms of this date as it pertains to accounting for unapproved claims are addressed elsewhere in this Rebuttal Report.

96. *See, e.g.*, Complaint ¶144.

97. Halliburton's Engineering and Construction Group segment consisted of Kellogg Brown & Root and Brown & Root Services. (Company 2000 10-K SEC filing.)

significant portion of the Company's E&C segment. As such, disclosures of the alleged operational problems related to the integration of Dresser's M. W. Kellogg will inevitably entail discussions of the performance of the E&C unit as a whole. Disclosures such as the restructuring of the Company's E&C unit due to "serious operational problems in Halliburton's construction business" (as disclosed on October 24–25, 2000 and December 21–22, 2000) directly relate to the alleged unsuccessful Dresser integration. The significance of the integration of Dresser's M. W. Kellogg business into Halliburton's E&C segment was recognized by the Company and by analysts. For example, the September 29, 1998 Company press release announcing the completion of the merger states:

> Dick Cheney ... said, "The merger ... improves our position as the leader in providing integrated project management services .... The combination of M.W. Kellogg's engineering expertise with Brown & Root's project management and construction strengths enhances the competitive position of the new Kellogg Brown & Root organization. ... The merger will both lower Halliburton's cost structure and increase its operating income from added revenues. We expect that net synergistic benefits will add at least $250 million pretax to earnings on an annualized basis."[98]

On March 1, 1999, Donaldson, Lufkin & Jenrette issued a report on Halliburton in which it rated the Company's stock a "Top Pick." The report stated:

---

98. Cited in the Complaint, ¶83.

Appendix E

> *Leading engineering and construction company in the world*—The combination of Dresser's M.W. Kellogg subsidiary and Halliburton's Brown & Root subsidiary creates one of the largest and best positioned e&c companies with a worldwide presence and a number of unique technologies in diverse areas including LNG, ammonia, olefins and ethylene.[99]

Curative Disclosures:

63. Ms. Allen suggests that the presence of days with positive company-specific returns and negative news announced related to E&C somehow undermines my analysis of loss causation. She cites July 26, 2001 and July 27, 2000 as examples. As discussed in the Nettesheim Report, the positive change in Halliburton's stock price on July 26, 2001 was due to the fact that Halliburton released its second quarter financial results that day, reporting strong revenue and earnings and, as a result, several analysts raised their estimates.[100] The positive change in Halliburton's stock price on July 27, 2000 was due to positive second quarter 2000 earning results released after market close on July 26.[101] The positive returns on

---

99. Cited in the Complaint, ¶93.

100. Nettesheim Report, Appendix, ¶¶58–59.

101. *See, e.g.*, Deutsche Banc Alex. Brown, "Halliburton Company [HAL] 'BUY': Upgrading Rating to Buy From Market Perform, 2000/2001 Estimates Raised," July 27, 2000; SunTrust Robinson Humphrey Capital Markets, "HAL—June Q Above Expectations, Driven by Strength in Energy Services," July 27, 2000.

both days do not indicate that the market did not react to negative news. Rather, it indicates that the reaction to positive news may have been greater than the reaction to negative news. Ms. Allen's analysis merely suggests that there may be additional dates beyond those identified in the Nettesheim Report that demonstrate loss causation. While I do not necessarily agree that these dates represent curative disclosures, to the extent that negative curative information exerted downward pressure on Halliburton's stock price, which rose or maintained its price for other reasons on days such as July 26, 2001 and July 27, 2000, my analysis of loss causation is conservative.

Controlling for the E&C Industry:

64. Ms. Allen argues that I do not properly control for the E&C industry[102] and that I "mischaracterize the underperformance of E&C as due to unrealized benefits of the Dresser merger."[103] These topics are addressed in paragraphs 24–27 of this Rebuttal Report.

Alleged Non-Culpable News on Dates of Curative Disclosures:

65. Ms. Allen alleges that non-culpable information was released on dates which I find curative disclosures of the allegations related to the Dresser integration. However, her examples of confounding news are misleading, not substantial, unrepresentative of the

102. Allen Report, p. 18.

103. Allen Report, p. 20.

overall market consensus, and/or not relevant to loss causation in this matter. I address each of these dates in what follows.

66. *October 5, 1999*: After market close October 4, 1999, the Company warned that it expected its 1999 third-quarter earnings to be in the range of 11 to 13 cents per diluted share. The previous average analyst estimates was 19 cents per share. The Company attributed the reduction, in large part, to the lower than expected profits of the joint ventures of its subsidiary, Dresser Industries, which was part of its engineering and construction units and many of the other business units of the Dresser Equipment Group. Ms. Allen misleadingly cites two analyst reports released on October 5, 1999 as evidence of confounding non-culpable news released on that date.

67. Ms. Allen claims that an October 5, 1999 CIBC World Market report evidences that the October 5 decline may be attributed to "industry issues."[104] I cite the same analyst report in the Nettesheim Report.[105] The actual decline in Halliburton's stock price that day was 13.2%; the company-specific decline was 9%. Industry-wide disclosures are generally captured by the industry index and are not reflected in the company-specific returns. Thus, these negative "industry issues" are accounted for in my analysis.

68. Ms. Allen states that the weakness in the Company's earnings was in "virtually all areas of the

104. Allen Report, pp. 23–24.

105. Nettesheim Report, ¶86.

business" (citing the same CIBC report). However, as stated in the Nettesheim Report, Halliburton attributed the reduction, "in large part," to the lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group.[106] Dresser Equipment Group was one of three business segments created at Halliburton as a result of the Dresser merger, encompassing what was formally Dresser's Energy Equipment segment.[107]

69. Lastly, Ms. Allen cites an October 5, 1999 Merrill Lynch report as evidence that "the market considered the sale to be positive news."[108] Such positive statements noted by Ms. Allen would not be a contributing factor to the decline in Halliburton's stock price—they are not confounding negative news. These positive statements by analysts were noted in the Nettesheim Report. However, as also noted in the Nettesheim Report, these same analysts also recognized that the move would "negatively affect earnings in the fourth quarter and for at least part of 2000."[109] This analyst attributed "most" of the shortfall

---

106. Nettesheim Report, ¶84, citing *Reuters News*, "Halliburton to Exit Two Ventures, Sees Lower Q3 EPS," October 4, 1999, 5:23 pm.; Halliburton SEC Form 8-K filed October 4, 1999.

107. Halliburton SEC Form 8-K dated September, 29, 1998.

108. Allen Report, p. 24 (emphasis removed).

109. Nettesheim Report, ¶85. As stated in the October 5, 1999 Merrill Lynch report cited by Ms. Allen:

> Late yesterday afternoon, HAL announced both positive and negative developments.

to the lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group. This is consistent with my conclusion that a significant portion of the stock price decline on October 5, 1999, was caused by information that partially corrected prior misstatements and omissions regarding the Dresser merger and the Company's related operational problems.

70. *January 5, 2000*: On Wednesday, January 5, 2000, both a Merrill Lynch analyst and a Brown Brothers Harriman & Co. analyst cut their earnings estimates for Halliburton. The Merrill Lynch analyst attributed his cut to reduced expectations for offshore construction results, a reduced growth estimate for oilfield spending outside North America and "less powerful synergies from the Dresser merger than [h]e had envisioned." I conclude that this was a partial disclosure related to

---

- The positive is that HAL will sell its JV interests in Dresser-Rand and IR Dresser Pump to Ingerson-Rand for $1.1 billion (pretax). HAL expects to retain pooling treatment of the Dresser Industries merger.

  ...

- The negative is that 3Q EPS is only expected to be $0.08–$0.10 from operations, which is below our $0.16 estimate. While most of the shortfall comes from the JVs that are being sold, HAL's oilfield earnings are also weaker than expected due to lower overseas results.

- We are cutting our 1999E from $0.71 to $0.57 and are taking our 2000E down from $1.30 to $1.15. About half the cut reflects elimination of the JV earnings sooner than we expected.

the Company's booking of unapproved claims on fixed-price contracts and the lack of benefits realized from the Dresser merger.[110] Ms. Allen argues that, contrary to my conclusion, the "reduced expectations for offshore construction results" is a non-culpable disclosure, because the Merrill Lynch analyst attributes this to "weak future business from projects in the North Sea, a delay regarding deepwater development projects and reductions in offshore construction that are in line with competitors"—reasons, she asserts, that "bear no relationship" with the allegations.[111] I disagree. The condition and success of Halliburton's construction operations is directly related to the allegations pertaining to the Dresser integration. Furthermore, to the extent these were industry-wide concerns, they are generally accounted for by my industry index, and not reflected in Halliburton's company-specific returns. In the Nettesheim Report, I opine that the news related to industry oilfield spending is non-culpable. However, I conclude that this news is unlikely to be a contributing factor to the significant company-specific decline in Halliburton's stock price because it was an industry-wide concern.[112] Ms. Allen argues that if the price decline is due to the reduction in the analysts' estimates, and the analyst cites this information as a "key factor" to the cut, then this information must have contributed to the decline in Halliburton's stock price.[113]

---

110. Nettesheim Report, ¶88.

111. Allen Report, p. 25.

112. Nettesheim Report, ¶¶90–91.

113. Allen Report, p. 25.

Her argument does not undermine my analysis. I did not conclude that this factor did not contribute to the total decline in Halliburton's stock price. Rather, I conclude that this news is unlikely to be a contributing factor to the significant *company-specific* decline. As explained in the Nettesheim Report, industry-wide concerns such as these generally are accounted for in my analysis through my industry index and are not reflected in the company-specific returns.

71. Notably, Ms. Allen does not refute my conclusion that one of the key reasons for the estimates cut by Merrill Lynch, namely "less powerful synergies from the Dresser merger than [the Merrill Lynch analyst] had envisioned," is relevant to loss causation.[114] The fact that this was one of the key reasons for the analyst's downgrade of Halliburton stock supports my conclusion that a significant portion of the stock price decline on January 5, 2000 was caused by information that partially corrected investors' erroneous assessments of the profitability of overseas construction projects and the benefits of the Dresser merger.

72. *October 25, 2000*: After market close on October 24, 2000, while announcing its third quarter earnings release, the Company disclosed that it would be restructuring its engineering and construction units. The subsequent restructuring charge taken in the fourth quarter (as revealed later in the December 21-22, 2000 partial disclosure) was predominantly due to the delays and cost

---

114. Merrill Lynch, "Halliburton Co; Downgrading from Buy to Accumulate," January 5, 2000, p. 2.

overruns of Halliburton's large fixed-price construction projects.[115] In the Nettesheim Report, I conclude that a significant portion, if not all, of the significant price decline on October 25 is related to the Company's booking unapproved claims on fixed-price contracts (discussed below) and lack of benefits from the Dresser merger.[116] Ms. Allen cites just one analyst report (by Dain Rauscher Wessels) as evidence of confounding news on October 25, 2000. Ms. Allen contends that the confounding news that day was regarding "the weaker than expected international market for the Energy Service Group."[117] The effect of that news is generally captured by my industry index. She puts forth the same information that I present in the Nettesheim Report, which demonstrates that more than 80% of Dain Rauscher Wessels' reduction in estimated operating earnings for 2001 comes from the Company's E&C unit (less than 20% comes from the Company's Energy Services unit). This supports my conclusion that "the negative news and sentiment is predominately about the operational problems, delays and cost overruns for large construction projects."[118]

73. *December 22, 2000*: On Thursday, December 21, 2000, Halliburton pre-announced fourth-quarter earnings and formally unveiled the restructuring of its engineering and construction units and its plan to take

---

115. Nettesheim Report, ¶95.

116. Nettesheim Report, ¶¶93–105.

117. Allen Report, p. 26.

118. Nettesheim Report, ¶¶104–105.

a charge of $120 million in the fourth quarter, the bulk of which was due to cost overruns at several overseas projects (the Company's initial announcement of its intent to restructure on October 24–25, 2000 is a curative disclosure discussed above). Ms. Allen contends that there was confounding information regarding "increased competitive pressure and intensified competition in pricing and labor disturbances in Venezuela and West Africa," in reference to a CIBC analyst report.[119] I also cite this CIBC analyst report and I note these factors in the Nettesheim Report.[120] However, these factors are not confounding news. On the contrary, they are reasons provided by the Company for the cost overruns at issue in this matter. As the CIBC report states, these factors were company-specific problems leading to cost overruns that were not expected to be recovered. The CIBC report distinguishes these problems from "general industry-wide issues" (which are generally accounted for in my analysis by my industry index):

> Although the E&C division was weak in the first half of 2000, we were surprised by management's earnings warning on the 3Q conference call. There were concerns that HAL might not have the critical mass to generate consistent and predictable profitability in the E&C business. Labor disturbances in Venezuela and West Africa caused significant costs to be incurred

---

119. Allen Report, p. 27, citing CIBC World Markets analyst report, dated December 22, 2000.

120. Nettesheim Report, ¶110.

> on several large fixed-fee E&C contracts. HAL has submitted claims on these costs to clients, but HAL does not believe that all the costs will be recovered. Additionally, relationships with some customers have deteriorated and the cost increase claims on seven other projects have not resolved as expected.
>
> General industry-wide issues are also impacting the E&C business. ...[121]

74. As noted above, the Dresser's construction unit (M. W. Kellogg) and Halliburton's Brown & Root engineering and construction operations, together, formed Halliburton's Kellogg Brown and Root—one of two divisions of Halliburton's Engineering and Construction Group. As disclosed on December 21–22, significant cost overruns, which were not expected to be recovered, were incurred at Kellogg Brown & Root and both Brown & Root Energy Services and Kellogg Brown & Root were impacted by the charges and reorganization.[122] As such, the December 21–22, 2000 disclosure of the restructuring necessitated by the severe operational problems arising from the failed Dresser merger was a partial disclosure of the allegations pertaining to the integration of Dresser

(as well as the allegations pertaining accounting for unapproved claims, discussed further below), causing a significant decline in Halliburton's stock price.

ii. Accounting for Unapproved Claims

75. Ms. Allen puts forth the following arguments in order to dispute my analysis of loss causation for the allegations pertaining to the accounting for unapproved claims:

- Ms. Allen states that I attributed any bad news related to fixed-price contracts as related to the allegations regarding unapproved claims and that the curative disclosures identified in the Nettesheim Report are not curative; [123]

- Ms. Allen states the risk of cost overruns was known by the market prior to the curative disclosures identified in the Nettesheim Report;[124]

- Ms. Allen states that there was no statistically significant price reaction to the actual disclosure of the change in accounting for unapproved claims.[125]

Each of these arguments is addressed in what follows.

124. Allen Report, p. 32.

125. Allen Report, p. 32.

Appendix E

Alleged Non-Culpable News on Dates of Curative Disclosures:

76. Ms. Allen criticizes my analysis of loss causation regarding allegations pertaining to accounting for unapproved claims because she asserts that I wrongly consider bad news related to fixed-price contracts as relevant to the allegations. She states "clearly, not all information related to fixed-price contracts is necessarily related to Plaintiff's allegations regarding booking of unapproved claims."[126] However, she fails to identify material negative information on these dates that is not related to the allegations (other than that already discussed in the Nettesheim Report). I address each of these dates of curative disclosures in what follows.

77. *January 5, 2000*: Ms. Allen argues that Carol Lau's January 5, 2000 analyst report "reveals absolutely no information regarding the booking of unapproved claims on fixed-price contracts."[127] As described in the Nettesheim Report, Ms. Lau reduced her year 2000 EPS forecast for the Company by $0.20, $0.07 of which was due to the E&C segment and the Dresser Equipment segment. I also note that on that day, Merrill Lynch analyst K. Simpson ("Simpson") cut his estimates of Halliburton's earnings due to reduced expectations for offshore construction results, a reduced growth estimate for oilfield spending outside North America and "less powerful synergies from the Dresser merger than [he]

126. Allen Report, p. 28.

127. Allen Report, p. 30.

had envisioned." The reasons Simpson cites for cutting his rating for Halliburton—except for his concerns about oilfield spending, an industry trend not a company-specific development—are related to Halliburton's alleged misstatements and omissions concerning revenues and profitability from large fixed-price construction contracts and the benefits of the Dresser merger. These disclosures reveal, in part, the true state of the Company's operating income due to unsatisfactory profitability of certain large fixed-price contracts, which Plaintiffs allege should have been disclosed earlier in the Class Period.[128]

78. *October 25, 2000*: Ms. Allen argues that, with respect to the October 25, 2000 disclosures, "there is no basis for [my] conclusion that E&C, a major segment of Halliburton's business, is synonymous with the allegations regarding unapproved claims."[129] The Complaint alleges (among other things) that "defendants were concealing ever increasingly serious operational problems with Halliburton's construction businesses, [and] huge unpaid change orders and cost overruns ("Unapproved Claim(s)") it was suffering on several of its large fixed-price/lump-sum contracts ...."[130] As discussed above, the events of October 24–25, 2000 and their relationship to the allegations regarding the Dresser integration, cost overruns and accounting for unapproved claims are discussed extensively in the Complaint, as well as in the

128. Complaint, pp. 140–141.

129. Allen Report, p. 30.

130. Complaint, ¶2.

Nettesheim Report. The price decline on October 25, 2000, was caused by revelations related to these allegations.

79. *December 22, 2000*: Regarding the December 22, 2000 disclosures, Ms. Allen argues that "problems with fixed-price contracts can occur independent of how unapproved claims are booked." She cites no such "problems." She also argues that Halliburton's cost overruns were attributed by analysts to "changes in market conditions" and cites the December 22, CIBC analyst report which discusses labor disputes in Venezuela and West Africa.[131] As discussed above, the CIBC report cited by Ms. Allen attributes the Company's cost overruns to Halliburton-specific problems—it distinguishes these problems from "general industry-wide issues." Ms. Allen also notes that "Plaintiff made no allegations about these labor disturbances or how Halliburton could have known them at the beginning of the alleged class period and failed to disclose them."[132] This statement mischaracterizes the allegations regarding accounting for unapproved claims. The allegations pertain to the undisclosed true probability of such cost overruns and that Halliburton had not disclosed such cost overruns.[133]

---

131. Allen Report, p. 31. (This is the same (and only) analyst report Ms. Allen cites as evidence of confounding news on December 22, 2000 in her discussion of the allegations pertaining to the integration of Dresser.)

132. *Id.*

133. *See, e.g.*, Complaint, ¶42(f).

Appendix E

The Risks of Cost Overruns:

80. Ms. Allen contends that "the risks of cost overruns connected to fixed-priced contracts were known by the market before the alleged curative disclosures."[134] The market may have been aware generally that there were certain risks associated with long-term fixed price contracts, but the allegations are that Defendants failed to adequately disclose the true probability of cost overruns, the magnitude of such probable cost overruns and the fact that it was recording revenue (as a consequence of cost overruns) it knew it was not likely to collect.[135] The fact that the market was not aware of the true probability of cost overruns, the magnitude of such probable cost overruns and the fact that Halliburton was recording uncollectible revenue is demonstrated by the market's reaction to disclosures of such cost overruns—including the decline in the price of Halliburton stock upon such disclosures.

March 14, 2000 Disclosure:

81. Ms. Allen asserts that March 14, 2000 was "an actual curative disclosure" regarding unapproved claims—because the change in Halliburton's accounting practices relating to the booking of revenues related to claims and change orders was disclosed on that date to the market in the company's Form 10-K. Ms. Allen wrongly states that the "Complaint alleges that March 14, 2000

---

134. Allen Report, p. 32. Ms. Allen refers to three analyst reports dated April 7, 1998, October 3, 1998 and October 7, 1998.

135. *See, e.g.*, Complaint ¶¶2, 10, 42(f).

was a partial disclosure," and notes that on this date Halliburton's stock price did not change significantly.[136] On the contrary, the Complaint alleges that Halliburton's March 14, 2000 SEC filing was misleading:

> The Company did not disclose [] $34 million of Unapproved Claims that the Company recognized in 99 in connection with joint venture projects. The omission flattened the ascending curve of Unapproved Claims recognized by the Company .... In addition, the Form 10K was false and misleading because many of the Unapproved Claims accrued by Halliburton did not qualify for recognition, *i.e.*, recovery was not objectively probable. Also, Halliburton was continuing to improperly record and recognize millions of dollars of such Unapproved Claims as revenue. ...[137]

My analysis (which finds no significant stock price movement on this date) is consistent with this allegation. If Defendants had accurately disclosed its improper

---

136. Allen Report, p. 33. Despite her conclusion that my event study analysis in insufficient, I note that Ms. Allen relies on my event study analysis to conclude whether there was a statistically significant stock price movement on certain dates. (For example, for March 14, 2000, and for her analysis of whether there was a statistically significant stock price increase on dates of misstatements alleged in the Complaint on page 42 of her report.) Ms. Allen does not put forth her own event study analysis in this matter. Her criticisms of my event study are undermined by her conclusions which rely on my event study.

137. Complaint, ¶231.

application of the accounting rules for fixed-price contracts, Halliburton's stock price would have declined substantially, as it did when the truth regarding cost overruns on fixed-price contracts was revealed to the market later in the Class Period.

iii. Asbestos Liability

82. Ms. Allen puts forth the following arguments in order to dispute my analysis of loss causation for the allegations pertaining to asbestos liability:

- Ms. Allen states that I fail to link the alleged misrepresentations to the curative disclosures[138] because (i) my loss causation analysis is not based on an understanding of Plaintiffs' allegations, (ii) the curative disclosures are not curative, and (iii) there is no consistency in my choice of curative disclosures;[139]

- Ms. Allen states that I fail to control for changes in the asbestos litigation environment;[140]

- Ms. Allen states that the stock price of other

138. This argument is also put forth in Defendants' Motion, p. 11, which states I "ignore the first step of specifically identifying what Halliburton said or did that was fraudulent" and fail to "link a later disclosure of the 'truth' to anything previously said or done by Halliburton."

139. Allen Report, pp. 33–40.

140. Allen Report, p. 39.

asbestos defendants reacted to Halliburton's curative disclosure, evidencing the disclosure contained unrelated information;[141]

- Ms. Allen states that the December 7, 2001 curative disclosure contained a credit rating agency downgrade for reasons separate from the allegations.[142]

Each of these arguments is addressed in what follows.

The Curative Disclosures are Related to the Allegations:

83. Ms. Allen asserts that my analysis is not based on a proper understanding of the allegations related to the asbestos liability, and that I "do not have an understanding of how Halliburton's asbestos reserves were estimated, nor how the market perceived how the estimation was made." Ms. Allen opines that the allegations in this matter pertain only to Halliburton's reserve for pending (and not future) asbestos claims, and that the Company's reserve was adequate. She implies that undisclosed liabilities not yet materialized by way of a lawsuit suit being filed are unrelated to the allegations.[143] I disagree—it is my understanding that the allegations are regarding Defendants' improper disclosure of Halliburton's overall asbestos liability.

---

141. Allen Report, p. 39.

142. Allen Report, p. 41.

143. Allen Report, p. 33. Allen Deposition, pp. 120:3–121:4.

84. Ms. Allen does not provide any evidence as to the market's perception, let alone evidence that the market's assessment contradicts my conclusions or the allegations. As cited in the Complaint, a UBS analyst report released during the Class Period on July 26, 2001, states the Company assured the market that the majority of any future asbestos claims or increases in settlement rates were covered by insurance:

> The company touched on its asbestos situation and once again indicated that it believed that it has the situation under control and that the financial impact should not be material to the financial health of the company. These comments also came out in a private meeting that we had with HAL's CEO several weeks ago. In that meeting, Mr. Lesar indicated that HAL maintains a significant amount of insurance that should that should cover the majority of any future claims or increases in settlement rates.[144]

85. Ms. Allen concedes that the curative disclosures that the Nettesheim Report related to asbestos liability are in fact "related to asbestos," however, she argues that I provide "no further link." She cites June 28, 2001 as an example, stating that "there is no allegation ... that Halliburton knew or should have known prior to June 28, 2001 that Harbison-Walker would request financial assistance from Halliburton for its asbestos claims ...." Similarly, she argues that the events of August 9,

144. Complaint, ¶177 (emphasis removed).

2001 (when Halliburton disclosed an increase in the number of pending asbestos claims and also increased its reserve) could not have been known at the beginning of the Class Period.[145] Theses arguments are fact based, and nevertheless fail to contradict loss causation. The allegations are that the Company failed to adequately disclose the full extent of its asbestos liability and the true probability of events such as these or similar events occurring; and failed to adequately reserve for the eventuality of these events. The decline in Halliburton's stock price that occurred as a result of these two partial disclosures is a consequence of such misrepresentation.

86. Ms. Allen argues that the stock price declines on five of the curative disclosure dates identified in the Nettesheim Report were related to verdicts which were considered "surprising" and "unexpected."[146] The verdicts were "surprising" to the market, because the market was alleged to have been previously misinformed by Defendants as to the full extent of its asbestos liability and the true probability of events such as these occurring, and misled by Defendants that the "pending asbestos claims [would] be resolved without material effect on [Halliburton's] financial position or result of operations."[147]

87. Ms. Allen states that "there is no consistency in [my] choice of curative disclosure dates ..." because

---

145. Allen Report, p. 37.

146. Allen Report, pp. 37, 40.

147. Complaint ¶74, citing Halliburton's SEC Form 10-K for 1999.

there are dates during the Class Period "where information related to asbestos is announced that [I do] not consider curative disclosures." She cites news released on April 7, 2000 and March 21, 2001 regarding litigation involving Highlands Insurance Group, Inc. and Halliburton as examples.[148] Neither of these two dates had a statistically significant stock price movement and confounding disclosures may explain Halliburton's stock price movement on those dates.[149] Ms. Allen is merely

148. Allen Report, p. 38.

149. The article cited by Ms. Allen for April 7, 2000 was released at the end of the trading day (3:56 pm). Halliburton's stock price was up 1.1% and down 3.3% on Friday, April 7 and Monday, April 10, respectively. The company-specific returns are 1.2% and 3.0%, respectively (these are not statistically significant returns). Also, after market close on April 7, 2000, there was a positive article regarding a decision by U.S. Ex-Im Bank to guarantee a total of $500 million of loans extended to the Tyumen Oil Company (the largest guaranteed by the bank for Russian companies), making it possible to involve numerous U.S. companies including Halliburton Energy Service, in joint projects and create thousands of jobs. (*Daily News Bulletin*, "U.S. Ex-IM Bank's Guarantees of TNK Loans Largest in Russia," April 7, 2000, 7:41 pm.)

The article cited by Ms. Allen for March 21, 2001 was released after market close (6:25 pm). Halliburton's stock price was down 5.6% and down 2.5% on March 21 and 22, respectively. The company-specific returns are 3.0% and 0.4%, respectively (these are not statistically significant returns). On March 22, 2001, Halliburton announced "its legal counsel, Vinson & Elkins LLP, believed that the ruling would likely be reversed on appeal to the Delaware Supreme Court and that it planned to file an appeal as soon as possible." (*Reuters*, "UPDATE 1—Halliburton to appeal Highlands asbestos ruling," March 22, 2001.)

proffering additional dates that may demonstrate loss causation. As stated in the Nettesheim Report, in the future, I may consider additional and/or different dates as partial disclosures of the alleged fraud based on additional analyses, materials, further discovery, and/or the opinions of other experts in this matter.[150] To the extent that disclosures related to the asbestos allegations occurred on dates proffered by Ms. Allen and contributed to a decline in Halliburton's stock price, my analysis of loss causation is conservative.

Changes in the Asbestos Litigation Environment:

88. Ms. Allen argues that I "fail[] to control for changes in the asbestos litigation environment" because I have "done nothing to include in [my] index companies with similar asbestos exposure to Halliburton."[151] The flaws in Ms. Allen's argument are discussed at paragraph 28 to this Rebuttal Report.

The Stock Prices of Other Asbestos Defendants:

89. Ms. Allen's cites the decline in other companies' stock prices following the December 7, 2001 disclosure as evidence that "the disclosure contained information other than about Plaintiff's allegations regarding asbestos reserves." She fails to identify what this "other" information may be. As discussed above, industry-wide factors generally are not reflected in Halliburton's

150. Nettesheim Report, ¶78.

151. Allen Report, p. 39.

company-specific return. Moreover, as Ms. Allen indicates, Halliburton's stock price did not go down because of industry or market concerns—rather, the stock prices of these other companies when down because of news specific to Halliburton.[152]

90. I also note that the decline in the stock prices on December 7, 2001 for the companies presented by Ms. Allen are significantly less than the decline in the price of Halliburton stock price that day. Halliburton's stock price dropped 42.4% (the company-specific return was 42.7%). Sealed Air, Georgia-Pacific, CBS/Viacom, and Crown Holdings dropped 9.8%, 13.9%, 4.9% and 0%, respectively. Ms. Allen's arguments support, rather than contradict, my conclusion that this date contained company-specific disclosures relevant to loss causation. She does not provide any evidence that the price of Halliburton stock declined because of news about other companies' asbestos exposure, or non-specific Halliburton news about the "asbestos litigation environment."

---

152. Ms. Allen cites the following statement in an analyst report:

> Asbestos litigation re-emerged as a concern for investors last week after oilfield services giant Halliburton Co. said a jury slapped one of its units with $30 million in damages ... [the verdict] spurred continued anxiety on Monday, driving down shares of a disparate group of other companies facing asbestos claims.

Appendix E

Moody's December 7, 2001 Downgrade:

91. Lastly, Ms. Allen argues that on December 7, 2001, Moody's Investors Service (Moody's) downgraded Halliburton for reasons unrelated to the allegations. As Ms. Allen states, Moody's downgrade "reflected concerns about the future asbestos claims, and the inconsistencies in the size of judgments."[153] Ms. Allen's argument is based solely on her flawed characterization of Lead Plaintiff's allegations regarding Halliburton's asbestos "reserve" and asbestos "liability," which I discuss above. Since Moody's downgrade does, in fact, relate to the allegations in the Complaint, the downgrade cannot be considered a non-culpable cause of Halliburton's stock price decline. A correct interpretation of Plaintiffs' allegations, which includes misrepresentations regarding the probability of future asbestos claims against the Company, is consistent with my conclusion that this Moody's downgrade is a corrective disclosure.[154]

---

153. Allen Report, p. 41, citing Moody's Investors Service Press Release, December 7, 2001.

154. I note that in her deposition, Ms. Allen concedes that the announcement by Halliburton on December 7, 2001 regarding the recent asbestos verdicts contributed to the decline in the Company's stock price that day.

> Q. So is it the case that, as you understand it the decline in Halliburton stock on December 7 was at least in part related to something that Halliburton said on that day?
>
> A. Yes and I think it's in part related to the 30 million dollars verdict. (p. 179:6–12)

Appendix E

iv. An Empirical Analysis of Loss Causation

92. Defendants argue, generally, that my analysis of loss causation is flawed because I have "not provided the required empirical showing that some percentage of the stock price drop was attributable to the corrective disclosure."

93. As stated in the Nettesheim Report, I conducted several empirical analyses demonstrating loss causation.

Q. Am I correct that on December 7 there was a very substantial decline in Halliburton's share price?

A. Correct.

Q. And did you reach any judgment or conclusion as to what caused that drop in Halliburton's stock price?

A. Around the time—around this time in December, I believe the price of Halliburton stock was falling because of uncertainty regarding asbestos and the change in the asbestos environment as well as some recent and unexpected verdicts and judgments that related to Halliburton and I also believe that there is at least some commentary from the analyst that the market reaction around the time was an overreaction, particularly the reaction around the December—around December 7. (pp. 97:20–98:14)

A. It's my understanding that the new piece of information that the analysts considered important that was discussed on December 7 is the 30 million dollars verdict. I don't recall other information that the analysts picked upon from what the company had said or considered new information. (p. 173:14–20)

These analyses include: an econometric analysis of the Company's stock returns; a review of all of the news surrounding the day on which the alleged disclosure was made; a determination of how much of the day's stock return can be attributed to company-specific news and events; a review of all of the available analyst reports surrounding the day on which the alleged disclosure was made to determine how the company's statements or communications impacted market participants' assessments of the company's value; an empirical analysis of the information on and surrounding the disclosure date; an analysis to determine what specific news items were important on the day of the alleged disclosure or on the days surrounding the day of the alleged disclosure; an empirical analysis to determine the relative importance of different pieces of news with respect to impact on stock valuation, *i.e.*, how different pieces of news impacted the stock price, an examination of contemporaneous assessments (both qualitative and quantitative) as to the impact on value.[155] Defendants fail to proffer additional or alternative analyses relevant to loss causation to those contained in the Nettesheim Report.

94. In fact, Ms. Allen's conclusions regarding loss causation in this matter rest heavily on the opinions of analysts and news commentators during the Class Period. For example, on page 21 of her report she cites three analyst reports and one news commentator in support of her conclusions regarding the October 25, 2000 disclosures:

---

155. Nettesheim Report, ¶81.

> The fact that analysts attributed the Engineering & Construction segment's difficulties not to any failure to achieve the benefits of the merger with Dresser, but to industry conditions that were unanticipated at the time of the merger and were of unknown duration demonstrates that the disclosure of these problems is unrelated to the alleged fraud, and, as such, caused no losses.[156]

Similarly, Ms. Allen has relied on analysts' opinions in assessing loss causation in other recent securities litigation.[157]

C. The Curative Disclosures Have Been Adequately "Linked" to the Alleged Misrepresentations

95. Defendants and Ms. Allen argue that the curative disclosures identified in the Nettesheim Report are not curative of the alleged disclosures because I "made no effort whatsoever to actually link later disclosures to specific prior statements."[158] As discussed herein, in the

157. *See, Jerry Ryan, et al. v. Flowserve Corporation, et al.*, Civil Action No. 3:03-CV-1769-B ECF, United States District Court for the Northern District of Texas, Dallas Division, 2007 U.S. Dist. LEXIS 83824, Decided and Filed November 13, 2007.

158. Defendants' Motion, pp. 13–14. *See also*, Allen Report, p. 17.

Nettesheim Report, and in my deposition testimony, I tie each of the curative disclosures to specific allegations in this matter.[159] My analysis demonstrates that significant declines in Halliburton's stock price were caused by the corrective disclosures pertaining to the allegations and not by unrelated information.

D. Alleged Misstatements Inflated Halliburton Stock is Adequately Demonstrated by the Decline in the Price of Halliburton Stock upon Partial Corrective Disclosures

96. Ms. Allen argues that "on 20 of the 22 alleged misstatement dates in the Complaint, [my] event study results are not consistent with an increase in alleged inflation in Halliburton's stock price."[160] It is not necessary that disclosures by Defendants that Plaintiffs allege were false or misleading are associated with statistically significant stock price returns. It is sufficient if the misstatements or omissions fraudulently propped up Halliburton's stock price.

E. Ms. Allen's Analysis of Loss Causation for Halliburton "Peer" McDermott is Misleading, Erroneous and Irrelevant

97. Ms. Allen claims to have applied the "same steps" used in my analysis to McDermott and concludes her analysis "yields loss causation." This leads her to conclude

---

159. *See, e.g.*, Nettesheim Deposition, pp. 110:7–111:5.

160. Allen Report, pp. 41–44.

that my test for loss causation is not reliable because "regardless of the underlying condition under study, it yields a positive result."[161]

98. Ms. Allen's exercise makes no sense, particularly given that she is assuming that any negative information regarding McDermott's marine construction business is a partial corrective disclosure. Rather than assume that negative news about Halliburton's E&C business is a corrective disclosure, I analyzed the news to determine whether it relates to the failed Dresser merger or problems with long-term, fixed-price contracts. Because of the absence of allegations regarding McDermott's marine construction business, her conclusions are meaningless. Using a nonsensical methodology (which is not my methodology, as discussed below) she concludes that there are dates during the Class Period in this matter where McDermott's stock price declined significantly upon negative disclosures related to McDermott's marine construction business. This merely demonstrates that when bad news came out, McDermott's stock price went down—it says nothing to loss causation. If, in her hypothetical example, Ms. Allen assumed that the information disclosed on these "bad news dates" was information that McDermott should have disclosed earlier in the Class Period (which she does not), then, possibly, she has analyzed loss causation for such allegations. But a finding of loss causation under this assumption would be consistent with and supportive of my methodology.

---

161. Allen Report, p. 45.

Appendix E

99. The methodology applied by Ms. Allen is not the methodology I applied in the Nettesheim Report. The methods used in my analysis (including, but not limited to, the control period, the Class Period, the market and industry indices, and the analysis of news and stock prices movements surrounding particular events to determine whether negative news relates to the allegations in the Complaint) were designed specifically for the allegations against Halliburton in this matter. They are not transferable, as Ms. Allen suggests, to a meaningless analysis of another company for which there are no allegations. If one were to analyze loss causation for another company with another set of allegations, in order to replicate my methodology, one would follow the same steps, but the results of these steps would inevitably be very different.

100. For example, contrary to Ms. Allen's suggestion, there is no evidence that the appropriate industry index for McDermott is the same as the industry index I use for Halliburton. I conducted a rigorous analysis to determine the most appropriate industry index for Halliburton.[162] Also, Ms. Allen uses the same control period as I use for Halliburton. The control period I use was chosen because of reasons specific to Halliburton and the allegations in this matter[163] and are not necessarily appropriate for Ms.

---

162. *See*, Appendix to Nettesheim Report, ¶¶6–8.

163. Appendix to Nettesheim Report, ¶3:

> In this case, I used a control period from October 1, 1998 through September 30, 1999. This is a one-year

Allen's hypothetical McDermott case.[164] Moreover, Ms. Allen fails to apply any economic theory to her analysis—this contradicts statements elsewhere in her report.[165]

/s/
Jane D. Nettesheim

---

period that begins shortly after the Dresser Merger, and overlaps approximately the first four months of the Class Period. The control period is typically a one-year period that occurs prior to the start of the Class Period. However, in this case, the control period must start after the Dresser Merger in order to reflect the stock price of the combined companies.

164. I also note that the table presented on page 47 of the Allen report that is labeled "Results of Nettesheim Loss Causation Analysis for Halliburton" which she cites to paragraph 45 of Nettesheim Report contains the results from my analysis of *Cammer/Unger/Bell* Factor 5, not the results from my analysis of loss causation.

165. In her report, Ms. Allen asserts that one must apply economic theory to an industry index (pp. 12–13) which would seem to be relevant to a loss causation argument.

APPENDIX F — SUPPLEMENTAL EXPERT REPORT OF LUCY P. ALLEN, UNITED STATES DISTRICT COURT, NORTHERN DISTRICT OF TEXAS, DALLAS DIVISION, DATED JANUARY 18, 2008

UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF TEXAS
DALLAS DIVISION

No 3:02-CV-1152-M

THE ARCHDIOCESE OF MILWAUKEE SUPPORTING FUND, INC., et al.,

Plaintiffs,

v.

HALLIBURTON COMPANY, et al.,

Defendant.

Supplemental Expert Report of Lucy P. Allen

January 18, 2008

TABLE OF CONTENTS
[TABLE INTENTIONALLY OMITTED]

I. SCOPE OF ASSIGNMENT

We were asked by Counsel for Halliburton Co. ("Halliburton") in *Archdiocese of Milwaukee Supporting*

Fund, Inc., et al. v. *Halliburton Company, et al.* to review and comment on the Rebuttal Report of Jane D. Nettesheim ("Nettesheim Rebuttal") as well as Plaintiff's Opposition to Motion to Strike Expert Report of Jane Nettesheim and Plaintiff's Motion to Strike the Expert Report of Lucy Allen.

II. SUMMARY OF FINDINGS

Ms. Nettesheim's Rebuttal Report and Plaintiff's briefs fail to address any of the issues that were raised in my first report in this matter, dated November 16, 2007 ("First Allen Report").

Ms. Nettesheim has provided no evidence to support the claim that the alleged misrepresentations inflated Halliburton's stock price. According to her analysis, there is no statistically significant price increase during the alleged class period at the time of the alleged misrepresentations that can be tied to the misrepresentations.

Ms. Nettesheim's only evidence that the price was inflated is that Halliburton's stock price allegedly declined in a statistically significant manner and did so because of a partial corrective disclosure of the alleged fraud. Yet both parts of Ms. Nettesheim's analysis are erroneous and unreliable, i.e., she has failed to show that the price decline is statistically significant and has failed to show that the reason for the decline was a corrective disclosure of the alleged fraud.

On each alleged curative disclosure, Ms. Nettesheim failed to make a reliable link between the alleged price decline and a specific allegation.

There is virtually no analyst or other market commentary on any of Ms. Nettesheim's dates of alleged curative disclosures that discusses a revelation related to any of the allegations.

III. QUALIFICATIONS AND REMUNERATION

My qualifications and remuneration were set forth in the First Allen Report.

IV. MATERIALS CONSIDERED

In preparing this report, we considered the following materials in addition to what was considered for the First Allen Report:

- Lead Plaintiff's Opposition to Motion to Strike Expert Report of Jane Nettesheim ("Opp Mot Strk Nettesheim");
- Lead Plaintiff's Motion to Strike the Expert Report of Lucy Allen and Incorporated Memorandum of Points and Authorities ("Mot Strk Allen");
- Lead Plaintiff's Reply in Support of its Motion for Class Certification;
- Appendix of Lead Plaintiff's Reply in Support for its Motion for Class Certification, Motion to

Strike the Expert Report of Lucy Allen, and Opposition to Motion to Strike Expert Report of Jane Nettesheim, including the Rebuttal Report of Jane D. Nettesheim ("Nettesheim Rebuttal") and materials cited in it;

- Defendants' Response to Lead Plaintiff's Motion for Class Certification;

- Defendants' Joint Motion to Strike the Report of Jane Nettesheim;

- Transcript of deposition of Lucy Allen in this matter;

- Expert reports, declarations and court opinions in *In re: Homestore, Inc. Securities Litigation ("Homestore"), In Re Vivendi Universal, S.A. Securities Litigation ("Vivendi"), In re: WorldCom, Inc. Securities Litigation ("WorldCom"), In re Enron Corporation Securities Litigation ("Enron");*

- Files and documents provided by Ms. Nettesheim;

- Analyst reports and other market commentary on Halliburton, and issues related to Halliburton and its industry;

- Stock prices and indexes information from FactSet Research Systems, Inc. and Bloomberg L.P.; and

- Textbooks and academic literature on statistics.

Appendix F

V. MS. NETTESHEIM FAILS TO ADDRESS THE ISSUES IDENTIFIED IN THE FIRST ALLEN REPORT

A. Overview

Ms. Nettesheim's Rebuttal Report and Plaintiff's briefs fail to address any of the issues that were raised in the First Allen Report.

Ms. Nettesheim has provided no evidence to support the claim that the alleged misrepresentations inflated Halliburton's stock price. According to her analysis, there is no statistically significant price increase during the alleged class period at the time of the alleged misrepresentations that can be tied to the misrepresentations. Her conclusion that the stock was inflated as a result of the alleged misrepresentations is contradicted by her statistical results which fail to tie any statistically significant price increase to any alleged misrepresentation.

Ms. Nettesheim's only evidence that the price was inflated is that the price allegedly declined in a statistically significant manner and did so because of a partial curative disclosure of the alleged fraud. Yet both parts of this analysis are erroneous and unreliable: i.e., she has failed to show that the price decline is statistically significant and she has failed to show that the reason for the decline was a curative disclosure of the alleged fraud.

Appendix F

Her statistical tests are not valid and do not reliably test whether there is a statistically significant price movement on the dates of alleged curative disclosures. She presents no valid statistical evidence that the movements in Halliburton's stock price during the alleged class period are different from the movements during her control period. She has failed to show that any more days during the class period are statistically significant than would be expected if there were no fraud-related news events.

Ms. Nettesheim's statistical tests and event study analysis are neither reliable nor consistent with accepted methods. They are not consistent with the academic literature she originally cited and they are not consistent with, and, in fact, are directly contradicted by, the literature she and Plaintiff cite in their new reports and briefs. For example, the cited academic literature consistently indicates that the identification of a relevant event comes before the type of statistical test Ms. Nettesheim attempted to conduct.

Ms. Nettesheim has failed to present any reliable evidence that the reason for the alleged stock price decline was a curative disclosure of the alleged fraud. Plaintiff in this matter alleges three categories of allegations:

1. "severe but undisclosed problems associated with the acquisition and integration of Dresser" (herein, integration of Dresser);

2. "improper booking of unapproved claims as revenue" (herein, unapproved claims); and

3. "knowingly inadequate reserves for asbestos liability" (herein, asbestos reserves).[1]

For each alleged curative disclosure, Ms. Nettesheim fails to make a reliable link between the alleged price decline and a specific allegation. The Nettesheim analysis erroneously combines the first two categories and treated them both as being synonymous with the engineering and construction (E&C) business. More problematic than failing to treat the allegations separately is the fact that neither category of allegation is synonymous with E&C. There can be problems with Halliburton's E&C that are not caused by or related to the accounting for unapproved claims. And there can be problems with Halliburton's E&C business that are not caused by problems associated with the acquisition and integration of Dresser.

Not only has Ms. Nettesheim failed to show that the alleged curative disclosures are curative of the alleged fraud, she has failed to show that they are due to Halliburton-specific problems with E&C, rather than changes in the E&C industry overall. Ms. Nettesheim claims that she has controlled for movements in Halliburton's industry so that all observed excess returns cannot be due to changes in the E&C industry overall. The fact that her analysis and industry index fail to adequately control for changes in the E&C industry is clear, however, from a simple review of her index and market commentary during this period. According to market commentary, the period from the beginning of the alleged class

1. Plaintiff's Motion, p. 3.

period through the middle of 2001 was a difficult time for the E&C industry. We have plotted alternative E&C industry indexes, all of which are consistent with the market commentary and show a general decline over this period. Ms. Nettesheim's industry index, which she claims controls for this trend, is completely inconsistent with both the E&C indexes and the market commentary; her index is going up over this time period while the E&C indexes and the E&C market according to commentary are declining. If her index is her only control and it is not consistent with the overall movement in the E&C industry, she cannot be adequately testing whether Halliburton's decline is due to overall changes in the E&C industry or problems specific to Halliburton. Moreover, she needs to do more than prove that the decline is unrelated to the E&C industry overall; she needs to prove that the decline is caused by the revelation of the truth concerning specific prior misrepresentations alleged in this case. She fails to do so.

Similarly, Ms. Nettesheim fails to show that the alleged curative asbestos-related disclosures are curative of the alleged fraud related to the asbestos allegations. Furthermore, Ms. Nettesheim fails to control for changes in the asbestos litigation environment. There is abundant evidence that the asbestos litigation environment in general changed from the beginning of the alleged class period to the end of the alleged class period.

Ms. Nettesheim's conclusion that Halliburton's price declines during the alleged class period are caused by revelations of the alleged fraud is further belied by the

analyst and other market commentary. There is virtually no analyst or other market commentary on any of her dates of alleged curative disclosure dates that discusses a revelation of any of the alleged misrepresentations. For example, there is no discussion in any analyst or other market commentary that new information regarding the accounting for unapproved claims has been learned by the market or that the prior understanding of the accounting for unapproved claims has been corrected. Further, no evidence has been presented that any analyst or market commentary on the dates of any of the alleged curative disclosures suggested any falsity in any prior statements that the company had made about asbestos, asbestos reserves, or the integration of Dresser.

B. "Summary of Opinions" Section of Ms. Nettesheim's Rebuttal Report

Ms. Nettesheim's Rebuttal Report has a section entitled "Summary of Opinions." In the table below we list all the bullet points Ms. Nettesheim included in this section of her report. In particular, in the left column, we list each of Ms. Nettesheim's claims and, in the right column, our response to each claim. (Note that this section addresses only the points listed in the section entitled "Summary of Opinions"; there are other claims that Ms. Nettesheim makes in her Rebuttal Report which are addressed elsewhere in this report or in the First Allen Report.)

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
Contrary to Defendants' assertions, the event study methodology used in the Nettesheim Report is appropriate and fully consistent with the standards of my profession:	Not true. See below.
▪ It is the same method I have employed in other securities cases,	▪ She cites two prior reports: it is not the same method as described in one and the other is confidential and was not produced. While the report is unavailable for review, the part cited by the judge does not indicate any analysis of loss causation or discuss an event study at all (See section V.H below.)
▪ it has been accepted by the courts,	▪ The evidence provided contradicts Nettesheim's statement. See section V.H.
▪ and it is recognized in relevant literature.	▪ It is not recognized in any of the literature she cites (or any we could find). (See section V.G.)

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
▪ My industry index captures the effect of industry trends on Halliburton. Defendants fail to demonstrate that the industry index used in the Nettesheim Report is not appropriate (nor do they suggest a meaningful alternative).	Nettesheim's industry index does not capture the changes in the E&C industry or the asbestos environment during the class period. As used, it cannot test, for example, whether general E&C conditions rather than alleged fraud caused a price decline. Nor can it test whether changes in the asbestos litigation environment caused a price decline. (See section V.C.2.a.)
▪ The fact that approximately 5% of the days during the Class Period are statistically significant is not relevant to determining loss causation—whether there are more than or less than 5% of days with statistically significant stock price changes does not contribute to or detract from the statistical significance of those days.	Nettesheim's discussion of this claim is inconsistent with fundamental statistical principles in hypothesis testing. (See section V.E. 1 below.)

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
• Allen erroneously claims I purported to distinguish between news and non-news days. Allen's assertion that Halliburton's stock price reaction on "news days" is no different than its reaction on "non-news days" is unfounded because, among other reasons, her classification of news days and non-news days is flawed and her statements regarding fundamental concepts of statistical significance are erroneous.	A proper test of whether a company's stock price reacts to news would entail some control. Nettesheim did not distinguish between news days from non-news days to test her hypothesis that the stock reacts to news. Nettesheim claimed the stock reacted to material new information, but if she failed to identify the new information days first and merely looked to the days of reactions (as her report indicates), this method fails scientific reliability standards.[2]

2. For example, the *Polymedica* court endorsed the testimony of an expert that said that searching for the largest price drops to analyze market efficiency is not a scientific study and that a statistical comparison between news-days and non-news-days should have been performed instead. The court order reads as follows:

"Dunbar [the expert] testified:

> [Y]ou went and searched for the largest price drops. That's not a scientific study. A scientific study is one where you draw a sample and then you compare a

> test statistic from that sample to another sample .... All you did was went and picked the largest stock price drops and said, oh, gee, that just shows that it's informationally efficient. You picked five days out of about 160 trading days. What you should do is look at all 160 trading days and do a scientific study to see if there's a difference between the news days and the non-news days. And if you would have done that you would have found that there wasn't any difference between them.
> ....
>
> [I]f you picked news days as a sample, all news days, not just the ones you self selected. I mean, you selected the few news days that would prove your point. But there's many other news days in that contested period, anywhere from 23 to 59, versus [sic] on how you want to count them. If you want to look at what the stock price reaction is on those news days versus the non-news days, you'll find that you can't say that the news days were drawn from a different sample than the non-news days. In other words, they were providing as much information to the market as the non-news days.

Evid. Hr'g at 22-23. The Court endorses this criticism." [Polymedica Order, p. 14-15]

The *Polymedica* court order also states the following:

> "*Cf. Lehocky*, 220 F.R.D. at 506 (comparing news days with non-news days using "sophisticated statistical tests" ...). It is not sufficient simply to report movement on significant news days. To approach usefulness, an analysis should statistically compare all news days with all non-news days. *See Kumho Tire Co. Ltd. v. Carmichael*, 526 U.S. 137, 141 (1999) (explaining that an expert's testimony must be "relevant to the task at hand") (quoting *Daubert v. Merrell Dow Pharms., Inc.*, 509 U.S. 579, 597 (1993))" [Polymedica Order, p. 15]

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
▪ Allen misleadingly claims that my market index analysis is not replicable when the alleged discrepancies are not only immaterial, but, in fact, *de minimis*, and are the result, not of an error in my analysis, but rather a change by a third party data provider of the price of some stocks other than Halliburton during the Class Period.	Allen claims the market index is not identifiable. CRSP, Nettesheim's alleged data provider, was unable to identify her data. The differences in the market index are not *de minimis:* 40% of the days during the class period have returns that differ by more than 5% between the two data sets. Nettesheim's claim that this difference is the result of the data provider changing the price of stocks is unsupported and unbelievable.[3]

3. See section V.I.2.

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
▪ The control period used in the Nettesheim Report is more "robust" than that suggested by Allen, and is better suited for identifying dates of significant stock price movements during the Class Period.	The point is not whether the control period is robust; the point is that her findings are not robust or reliable. A change in the control period changes her findings substantially (9 out of 11 of her alleged curative disclosures are no longer significant).[4] Contrary to her claims, the academic literature Plaintiff cites supports the Allen alternative period and does not support her period.[5]

4. See First Allen Report, p. 13-14.

5. Plaintiff's cite from the Tabak and Dunbar article does not support Ms. Nettesheim's control period:

> In securities fraud cases, estimations [control] windows are often placed before the beginning of the alleged class period, ... **so that the estimation window would cover a "clean" period that could not have been tainted by any alleged stock price inflation.** [Mot Strk Allen p. 10, emphasis added]

This cite does not support Nettesheim's choice of control period because (a) the Nettesheim control period overlaps with the alleged

Appendix F

---

class period and therefore it is allegedly tainted by inflation according to Plaintiff, and (b) the portion of the Nettesheim control period that precedes the alleged class period is also allegedly tainted by inflation according to Plaintiff (Plaintiff is not seeking damages in relation to that period because claims relating to that period are time-barred.)

Also, note the Allen alternative control period is consistent with the Tabak and Dunbar article, which says:

> There are three general choices for the placement of an estimation [control] window: before the event window, surrounding the event window, or after the event window. [Tabak, David I. and Frederick C. Dunbar, "Materiality and Magnitude: Event Studies in the Courtroom," National Economics Research Associates, Working Paper #34. April 1999, p. 9]

The Marais and Schipper article cited by Ms. Nettesheim contradicts the Nettesheim control period:

> Analysts also cannot include returns during a period of alleged fraud [in their control period]. [p. 17A-21]

The Marais and Schipper article cited by Ms. Nettesheim supports the Allen alternative control or estimation period:

> **Estimation period** ....: Time period ... over which returns are taken to estimate the parameters of the market model or augmented market model; can include returns before the event period, after the event period, or both. [p. 17A-23]

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
Loss causation has been established for each of the allegations in this matter. ▪ Allen mischaracterizes my methodology	Her response appears to be that she read the Complaint and understood the allegations before conducting her statistical analysis.
▪ The Nettesheim Report addresses each of the three categories of allegations identified by Defendants	Her report does not *separately* address each of the categories and is overly broad in their treatment.[6]

6. For example, the Nettesheim Report claims that much of the negative news around the alleged October 25, 2000 curative disclosure related to problems with E&C and, from this, concluded that a significant portion of the price decline is due to Halliburton's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger, and attributes both to the news about E&C problems.

This is an instance where the Company released negative news ... A significant portion of the negative news, as attributed to the Company, in news reports and by analysts, was related to the problems with the engineering and construction units that Lead Plaintiff alleges could have been and should have been revealed earlier. Thus, a significant portion of the stock price decline on October 25, 2000 was related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged in the Complaint. [Nettesheim Report ¶93]

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
▪ The misrepresentations and omissions have been adequately tied to the curative disclosures.	Any stock price decline with news which mentions asbestos, E&C, fixed price contracts or cost overruns is "adequately tied" according to Nettesheim.[7]

For example, regarding the asbestos allegations, Ms. Nettesheim testified as follows:

> Q. So in your mind, this news release on June 28, 2001, was that a partial disclosure of, or is it, again, all of the company's prior statements about asbestos?
>
> A. It relates to the allegations regarding the under reserving of the asbestos reliability [sic].
>
> Q. How does it relate?
>
> A. It is talking about asbestos claims and the potential asbestos liability of Halliburton.
>
> Q. And that's a sufficient link in your mind?
>
> A. Yes. [Nettesheim Deposition, p. 124]

7. Ms. Nettesheim's testimony regarding fixed price contracts:

> Q. If there is a disclosure of bad news that in any way, shape or form relates to fixed price contracts, then it relates to the allegations about unapproved claims, correct?

A. Yes, in this case I did [sic]. [Nettesheim Deposition, p. 181]

Ms. Nettesheim's testimony regarding E&C:

Q. In your mind, is this one piece of information or multiple pieces of information contained in Exhibit number 4?

A. Well, I think it is referring generally to the restructuring and to the charges. It refers to generally the engineering and construction projects ...

A. There is - well, there is - I mean, generally, it contains information about the engineering and construction business. And it gives you some information about that business. [Nettesheim Deposition, p. 125-126]

Ms. Nettesheim's testimony regarding asbestos:

Q. So in your mind, this news release on June 28, 2001, was that a partial disclosure of, or is it, again, all of the company's prior statements about asbestos?

A. It relates to the allegations regarding the under reserving of the asbestos reliability [sic].

Q. How does it relate?

A. It is talking about asbestos claims and the potential asbestos liability of Halliburton.

Q. And that's a sufficient link in your mind?

A. Yes. [Nettesheim Deposition, p. 124]

Appendix F

Ms. Nettesheim's report regarding E&C:

> As there was no other negative news released that day, all of the price decline ... was caused by the partial disclosures related to the operational problems at the engineering and construction units and is related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged by Lead Plaintiff [Nettesheim Report ¶112].

Ms. Nettesheim's testimony regarding cost overruns:

> Q. And on this same issue, in your mind, this is a corrective disclosure or partial corrective disclosure of what statements made by Halliburton?
>
> A. This is related to the - what's generally called the unapproved claims or the cost overruns in the engineering and construction units. [Nettesheim Deposition p. 130]

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
▪ Each news item mentioned by Defendants as non-culpable on a date of a curative disclosure is misleading, immaterial to company-specific movement in Halliburton's stock, and/or unrepresentative of the overall market consensus.	Nettesheim's criticism is unfounded. Nettesheim's method of analyzing the cause of price movements is not replicable, is not based on accepted methods, applies faulty logic and is unreliable.[8]

8. See sections V.C, V.D, V.E, V.F and V.G in this report and sections VII, VIII, IX, X, XI, and XII in the First Allen Report.

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
▪ Loss causation is demonstrated by the decline in Halliburton's stock price upon the partial corrective disclosures during the Class Period. The absence of statistically significant stock price increases upon each date of a misrepresentation or omission is not unexpected and does not undermine my conclusion that Halliburton's stock price was inflated during the Class Period.	She appears to have concluded that the price was inflated at the beginning of the class period because the price declined at the alleged curative disclosures. She does not reconcile the fact that according to her analysis the price does not go up at the alleged misrepresentations yet goes down at the alleged curative disclosures. Rather than prove that the stock is inflated, her event study analysis indicates that there is no inflation from the alleged misrepresentations.[9]

9. See First Allen Report, p. 41-45 and section V.D of this report.

Appendix F

"Summary of Opinions" Section of Nettesheim Rebuttal Report	
Nettesheim claim:	**Response:**
▪ Allen's analysis of loss causation for Halliburton peer McDermott International, Inc. is misleading, erroneous and irrelevant. Without any reasonable assumptions regarding allegations concerning McDermott, she has no basis for her conclusions regarding loss causation.	Exactly. The same can be said of the Nettesheim analysis of Halliburton (and, in fact, was said in the First Allen Report). See section V.F.2 below.

C. Ms. Nettesheim Does Not Prove Loss Causation for Any of the Allegations

1. Ms. Nettesheim's alleged curative disclosures are not curative of the alleged misrepresentations

Ms. Nettesheim does not describe how her alleged curative disclosures are, in fact, curative of the alleged misrepresentations in this case. Not only is there no demonstrated link in her report or analysis between the alleged misrepresentations and the curative disclosures, but Ms. Nettesheim never attempts to make such a link, apparently not considering this a necessary step in loss causation analysis.[10]

---

10. In her deposition, she testified as follows:

> Q. And the reason why, as part of your loss causation analysis, is you're looking at prior statements by the company or officers of the company to identify that the corrective statements that are being identified in your report relates back to a prior statement that was not accurate; is that correct?
>
> A. Well, as I said earlier, I did not link or match up statement by statement earlier statements with the partial disclosures I discussed. [Nettesheim Deposition, p. 164-165]

According to Plaintiff's brief:

> " ... she testified in her deposition that she did not link a particular corrective disclosure to a single misrepresentation .... " [Opp Mot Strk Nettesheim, p. 13]

Indeed, we are unable to determine, for example, which "severe but undisclosed problems associated with the acquisition and integration of Dresser" were revealed on the alleged disclosure dates.[11]

2. Ms. Nettesheim does not prove loss causation for the allegations regarding the integration of Dresser

a. Ms. Nettesheim does not control for changes in the E&C industry

Ms. Nettesheim allegedly analyzes whether Halliburton's stock price declines are related to Halliburton's E&C segment.[12] As discussed below,

---

11. See Plaintiff's Motion, p. 3.

12. Ms. Nettesheim's testimony regarding E&C:

> Q. In your mind, is this one piece of information or multiple pieces of information contained in Exhibit number 4?
>
> A. Well, I think it is referring generally to the restructuring and to the charges. It refers to generally the engineering and construction projects.
>
> ...
>
> A. There is - well, there is - I mean, generally, it contains information about the engineering and construction business. And it gives you some information about that business. [Nettesheim Deposition, p. 125-126]

Nettesheim report regarding E&C:

this is not the appropriate test of loss causation for the alleged misrepresentations. Nor is her methodology an appropriate test of whether Halliburton's stock price declines are due to company-specific problems in the engineering and construction business.

Ms. Nettesheim mistakenly claims that, if her industry index does not explain Halliburton's stock price movement on a given date, then any negative news related to Halliburton's E&C segment must be a company-specific problem.[13] Her industry index, however, was not designed to test this hypothesis, as her selection criteria are not based on companies having a substantial E&C segment. The industry index is composed of 52 companies. Of the 4 E&C companies detailed in a Merrill Lynch Engineering & Construction industry report analyzing the Halliburton/Dresser merger,[14] only one company, McDermott International, Inc., was included in Ms. Nettesheim's 52-company industry index.

> As there was no other negative news released that day, all of the price decline ... was caused by the partial disclosures related to the operational problems at the engineering and construction units and is related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged by Lead Plaintiff [Nettesheim Report ¶112].

13. Nettesheim Report, ¶88-92.

14. Merrill Lynch report dated March 13, 1998.

Appendix F

Ms. Nettesheim claims there is "no index described as engineering and construction that includes Halliburton;"[15] but this does not release her from the burden of controlling for industry movements that are confounding factors in the analysis of Halliburton's stock price changes, such as the movements of the E&C industry. E&C accounted for approximately 30% to *50%* of Halliburton's annual revenues during the alleged class period.[16] Additionally, the construction of an E&C index is perfectly feasible: there are several sources (including analyst reports and financial press) which discuss the E&C industry and its participants.

Ms. Nettesheim in her rebuttal report claims that her industry index adequately controls for the E&C business because it includes 5 companies (in addition to McDermott) that have some E&C component to their business.[17] But these companies account for only 8% of

---

15. Nettesheim Rebuttal, ¶21

16. Computed as a ratio of revenues of the E&C segment (including BRES) to total Halliburton revenues for the years 1999-2001 as reported in Halliburton's 10-K for 2001, filed on March 12, 2002. See p. 15 and p. 17. The following are the percent of Halliburton's annual revenues accounted for by its E&C segment: 1999: 52%, 2000: 43%, 2001: 33%.

17. See Nettesheim Rebuttal, ¶24.

> Prior to submitting her rebuttal report, Ms. Nettesheim testified at deposition that she did not know whether the companies in her industry index had any E&C business:

her industry index during the alleged class period and their E&C portion therefore would necessarily account for even less.[18] Although she claims that these companies have E&C business segments based on her review of their business description, we could not find these companies in any list of E&C companies, in contrast to Halliburton, which was contained in numerous lists of E&C companies.

> Ms. Nettesheim criticizes the E&C index shown in the First Allen Report:
>
> Ms. Allen's definition of the E&C industry is based on only three companies identified in one analyst report issued over one year prior to the start of the Class Period. Unlike Ms. Allen, I did not limit my search for comparable companies to a single analyst's report published more than one year prior to the start of the Class Period.[19]

> Q. And were all of the companies in you index as reflected in Exhibit 16 to your report oil services companies?
>
> A. It's our understanding that they are.
>
> Q. Did any of those companies in your index have significant construction operations the way Halliburton did?
>
> A. I don't know specifically what the companies did ... [Nettesheim Deposition p. 21]

18. McDermott accounts for another 1% of her industry index.

19. Nettesheim Rebuttal, ¶24.

Appendix F

Contrary to Ms. Nettesheim's implication, the Merrill Lynch report is relevant to the allegations she claims to have analyzed. The first paragraph of the report is as follows:

> **Merrill Lynch: Engineering & Construction**
> **Reason for Report: Potential for Changes in E&C Valuation?**
> The pending acquisition of Dresser Industries by Halliburton is undoubtedly a deal driven primarily by issues in the oil services industry. But, in the process, a formidable engineering and construction company ... with $5 billion in revenues has been created and that new company could potentially change the E&C landscape ... [Merrill Lynch. March 13, 1998]

The Merrill Lynch report on the E&C industry addresses expected changes in the E&C industry as a result of the pending Halliburton/Dresser merger. Thus, rather than being a random source for E&C companies, the topic and content of this report is directly relevant to the issues Ms. Nettesheim claims to have analyzed. Ms. Nettesheim claims to analyze allegations related to problems with the integration of Dresser and claims to find Halliburton-specific problems related to the Company's E&C segment as related to the Dresser merger. This report, which Ms. Nettesheim dismissed, describes the expected change in the E&C industry as a result of the Dresser merger. In conducting her loss causation analysis, Ms. Nettesheim, according to her testimony, neither reviewed this report, nor any other material describing the anticipated effect of the merger or any other material

or statement by Halliburton prior to the start of the alleged class period.[20] According to *Fortune* magazine, for the years 1999, 2000 and 2001, Halliburton was the largest E&C company in the country. *(Fortune's* 2000 E&C industry list is attached as Attachment A)

When we plot alternative E&C indexes based on reports published during the alleged class period, we obtain the same result that we obtained with the E&C index in the First Allen Report (the one based on the Merrill Lynch report). In particular, we find that the E&C industry is declining, in sharp contrast to Ms. Nettesheim's industry index, which is rising over the period of alleged E&C-related curative disclosures.

Specifically, a November 24, 1999 CSFB analyst report lists 19 businesses which it characterizes in a table entitled "Engineering and Construction Markets and Participants;" it included M.W. Kellogg and Brown &

---

20. Ms. Nettesheim testified at deposition:

> Q. And there were many statements before the class period and you're not attributing to any one of those either, correct?
>
> A. I didn't look at statements before the class period. [Nettesheim Deposition p. 114]

Root (both owned by Halliburton).[21] Additionally, *Fortune* articles produced by Ms. Nettesheim ranked its *Fortune 1000* by industry classification during each year of the alleged class period, 1999-2001.[22] Each of these rankings listed Halliburton as the #1 company in the Engineering and Construction industry classification. None of the 5 companies in Ms. Nettesheim's industry index that Ms. Nettesheim claimed have E&C businesses appear in any of these lists of E&C industry participants, while the companies included in the E&C index in the First Allen Report do appear.

We plotted two additional indexes for the E&C industry based on the Credit Suisse and *Fortune* lists of E&C market participants issued during the alleged class

---

21. Credit Suisse First Boston, November 24, 1999, "The Engineering and Construction Monthly". Companies listed in the report are: M.W. Kellogg and Brown & Root (parts of Halliburton), Michael Baker, B E & K, Black & Veatch, Fluor, Foster Wheeler, Granite, ICF Kaiser (ICF Int'l), Jacobs, Kvaerner/John Brown, Lummus (Asea Brown Boveni), Morrison Knudsen, Parsons, Perini, Peter Kiewit Son's Inc., Raytheon, Stone & Webster, Turner.

22. *Fortune*, April 26, 1999, April 17, 2000 and April 16, 2001, "Fortune 1 Thousand Ranked Within Industries." Companies listed in the 2000 article are: Halliburton, Fluor, Centex, Peter Kiewit Sons', Foster Wheeler, Kaufman & Broad Home, Pulte, D.R. Horton, Lennar, Emcor Group, Jacobs Engineering Grp., Champion Enterprises, Morrison Knudsen, Ryland Group, NVR, U.S. Home, Oakwood Homes, MDC Holdings, Toll Brothers, URS, Beazer Homes USA, Comfort Systems USA, Clayton Homes, Granite Construction, IT Group, Stone & Webster, Standard Pacific.

period.[23] In addition, we included *Standard and Poor's 500 Construction & Engineering Index.*[24]

---

23. The CSFB index is based on companies listed in the Credit Suisse First Boston report from November 24, 1999 (excluding M.W. Kellogg and Brown & Root of course), which have available price information in the period between the beginning of the alleged class period and the last alleged E&C related disclosure. These companies are: Foster Wheeler, Granite, Jacobs, Michael Baker, Perini, Raytheon, Stone & Webster, and Turner. Fluor, although listed in the analyst report, was excluded because of a spin-off during the alleged class period. (As a check, we also created the index including Fluor while excluding the company's returns on the day of the spin-off. The results are virtually the same.)

The Fortune index is based on companies listed in the Fortune article from April 17, 2000 (excluding Halliburton of course), which have available price information in the period between the beginning of the alleged class period and the last alleged E&C related disclosure. These companies are: Beazer Homes USA, Centex, Champion Enterprises, Clayton Homes, Comfort Systems USA, D.R. Horton, Emcor Group, Foster Wheeler, Granite Construction, Jacobs Engineering Grp/., Lennar, MDC Holdings, NVR, Oakwood Homes, Pulte, Ryland Group, Standard Pacific, Stone & Webster, Toll Brothers, U.S. Home, URS, and IT Group. Fluor, although listed in the article, was excluded because of a spin-off during the alleged class period. (As a check, we also created the index including Fluor while excluding the company's returns on the day of the spin-off. The results are virtually the same.) Similar indexes are obtained based on the companies listed in the April 26, 1999, and April 16, 2001 articles.

24. Over the period graphed, the S&P Construction & Engineering Index contained Foster Wheeler Ltd., Fluor Corp., and McDermott International, Inc.

Appendix F

As can be seen from the graph below, the Credit Suisse E&C Index, the Fortune E&C Index, and the S&P 500 Construction & Engineering Index yield the same result as that of the E&C Index shown in the First Allen Report. All 4 indexes decline over the period of alleged E&C-related curative disclosures, while Ms. Nettesheim's industry index rises over the same period. Clearly, Ms. Nettesheim's industry index does not capture the general decline in the E&C industry over this time.

Market commentary further contradicts Ms. Nettesheim's claim that her industry index properly controls for changes in the E&C industry.

Appendix F

During the alleged class period, there is substantial commentary from analysts that E&C companies are generally experiencing weakness. For example, in the period between her alleged curative disclosures regarding E&C, analysts state the following:

> So far this year, HAL shares are up about 31%, reflecting anticipated improvement in industry fundamentals. However, HAL shares have underperformed the Oil Service Index by about 20% so far this year, mainly reflecting a sluggish anticipated recovery in the E&C business. [ABN AMRO, August 31, 2000]

> E&C stock prices end September flat from August but outperform the S&P Industrials, which declined 2.3%...The majority of engineering & construction stocks again saw declines in their share prices in the month of September despite a continuing stream of positive project announcements [Credit Suisse, October 21, 1999]

> The majority of engineering & construction stocks again declined in September, despite a continuing stream of positive project announcements .... The valuations of E&C companies remain depressed on an absolute P/E basis and relative to the S&P Industrials. [Credit Suisse, October 25, 1999]

> Engineering and construction stocks decline [sic] in October, and November has offered

> no relief ... Investing in engineering and construction companies has been a mostly painful experience throughout the past year. [Credit Suisse, November 24, 1999]

For example, October 25, 2000 is one of the dates alleged by Ms. Nettesheim to be a curative disclosure regarding Halliburton's E&C segment. Ms. Nettesheim claims that Halliburton's stock price decline is statistically significant after she controls for industry factors. Analyst commentary following this announcement, however, contradicts her claim. According to an article published by *The Oil Daily* on October 26, 2000, which quotes Simmons & Co.'s analyst Dan Pickering:

> Halliburton is not being punished for poor execution from its engineering and construction unit, but rather for its unfortunate exposure to a currently weak market, Pickering said.

b. Ms. Nettesheim presents no evidence that the price declines on any of the alleged curative disclosure dates are due to problems with the integration of Dresser

Ms. Nettesheim, illogically and without support, conflates news about the E&C business with the alleged problems with the integration of Dresser. While the integration of Dresser could affect E&C, many other factors unrelated to the alleged fraud could do so as well, as indicated by analyst commentary. The existence of general problems with the E&C business does not imply

that there are difficulties with the Dresser integration. Such a link has not been made.

In her rebuttal report, Ms. Nettesheim argues that her analysis adequately links issues regarding the E&C business with Plaintiff's allegations about the integration of Dresser. She states:

> Disclosures of the alleged operational problems related to the integration of Dresser... will inevitably entail discussions of the performance of the E&C unit as a whole. [Nettesheim Rebuttal ¶62]

The logic that this supports her linkage of E&C announcements to allegations regarding the integration of Dresser is incorrect. Even if operational problems related to the integration always entail a discussion of E&C, it is not true that discussions of E&C imply operational problems regarding the integration of Dresser.[25]

In addition, Ms. Nettesheim's rebuttal report offers the following as evidence that she linked the alleged

---

25. Moreover, it is not clear why, if operational problems existed with the integration of Dresser, the analysts would discuss E&C as a whole. Halliburton and the analysts who followed the company were often quite specific in discussing the issues affecting the company. For example, an analyst report on December 22, 2000 stated: "Labor disturbances in Venezuela and West Africa caused significant costs to be incurred on several large fixed-fee E&C contracts." [CIBC World Markets, December 22, 2000]

curative disclosures to the allegations regarding the integration of Dresser:

> Disclosures such as the restructuring of the Company's E&C unit due to "serious operational problems in Halliburton's construction business" (as disclosed on October 24-25, 2000 and December 21-22, 2000) directly relate to the alleged unsuccessful Dresser integration. [Nettesheim Rebuttal ¶62]

We reviewed all of the news articles and analyst reports that Ms. Nettesheim provided for the days following her alleged Dresser-related disclosures (the announcements on October 24-25, 2000 and December 21-22, 2000), and find no mention of:

- "operational problems" (serious or otherwise), or

- integration or merger (in particular, a search of those terms yielded no results).

Ms. Nettesheim does not provide any source for the sentence cited above or any indication of the source of the quoted phrase ("serious operational problems in Halliburton's construction business"). Moreover, this is the only sentence that she provides as evidence of a disclosure during the alleged class period in the whole subsection discussing loss causation entitled "The Dresser Integration and E&C." We found no evidence of such a quote in market commentary on the days of Ms. Nettesheim's alleged curative disclosures or any

of the days in the following calendar week. We found a very similar sentence in the Complaint where it is an allegation, not a quote.[26] Ms. Nettesheim mischaracterizes the allegation of "serious operational problems" above as a curative disclosure.

3. Ms. Nettesheim does not prove loss causation for the allegations regarding the accounting of unapproved claims

Ms. Nettesheim does not prove loss causation for the allegations regarding the accounting of unapproved claims. Plaintiff alleges that, "Halliburton had secretly changed the way it was accounting for Unapproved Claims on construction contracts and was now recognizing them as revenue when the claims were asserted ..."[27] Further, Plaintiff alleges that, "By including the unapproved claims in the Company's reported revenue, profit and margins were more favorable than they would have been if the accounting policy had not been changed."[28]

Ms. Nettesheim testified that if a disclosure was in any way related to fixed-price contracts, then she considered it related to the allegations regarding unapproved claims:

> Q. If there is a disclosure of bad news that in any way, shape or form relates to fixed price

---

26. See Complaint ¶30 which uses the same phrase as the one quoted in Nettesheim Rebuttal Report as an allegation with the variation that in the Complaint the word business is plural.

27. Complaint, ¶42d.

28. Plaintiff's Motion, p. 5.

> contracts, then it relates to the allegations about unapproved claims, correct?
>
> A. Yes, in this case I did [sic]. [Nettesheim Deposition, p. 181]

An announcement of information that could have some connection to an alleged misrepresentation is not proof of loss causation. Clearly, not all information related to fixed-price contracts is necessarily related to Plaintiff's allegations regarding booking of unapproved claims.

a. The alleged curative disclosures are not curative of alleged misrepresentations regarding the booking of unapproved claims

In her first report, Ms. Nettesheim states:

> The following events [October 5, 1999, January 5, 2000, October 25, 2000 and December 22, 2000] are examples of information disclosed during the Class Period that brought, in part, investors' perceptions of the Company's financial condition related to its booking of unapproved claims on fixed-price contracts and the benefits from the Dresser merger more in-line with its alleged true condition at that time.[29]

In her rebuttal report, Ms. Nettesheim alleges that three of the listed alleged curative disclosures (January

29. Nettesheim Report, ¶83.

5, 2000, October 25, 2000 and December 22, 2000) are curative of the alleged misrepresentations regarding the booking of unapproved claims.[30] We find that on none of these alleged curative disclosures dates were the alleged misrepresentations regarding unapproved claims revealed.

January 5, 2000

Although Ms. Nettesheim concludes that January 5, 2000 was a curative disclosure of the allegations regarding unapproved claims, she presents no evidence that supports her conclusion. Regarding January 5, 2000, Ms. Nettesheim claims:

> On Wednesday, January 5, 2000, Halliburton made a partial disclosure related to the Company's booking of unapproved claims on fixed-price contracts and the lack of benefits realized from the Dresser merger as revealed in a conversation with analyst Carol Lau with Brown Brothers Harriman & Co. [Nettesheim Report, ¶88.]

Contrary to Ms. Nettesheim's finding, this report reveals absolutely no information regarding the booking of unapproved claims on fixed-price contracts, and Ms. Nettesheim offers no support for her conclusion that the price decline is cause by the disclosure of the allegations

30. Nettesheim Rebuttal, ¶76-79.

regarding the booking of unapproved claims.[31] Plaintiff claims that Ms. Nettesheim has conducted a post-mortem analysis of the cause of the price reaction on this date.

> January 5, 2000 ... While she considered analyst reports, she also looked behind the Brown Brothers Harriman & Co. report to analyze the changes in the earnings per share estimate for different segments of Halliburton's business, and to determine which part of the news had most effect on the analyst's model and Halliburton's stock price. This is precisely the type of "post-mortem" analysis endorsed by *Allegiance*. [Opp Mot Strk Nettesheim, p. 17-18]

If Ms. Nettesheim did "look behind" the Brown Brother Harriman report, she has provided no information about what she found. Contrary to Plaintiff's implication, there is no analysis of the analyst report; the numbers presented in Ms. Nettesheim's expert report are merely a recitation of the numbers in the analyst report.[32]

In Ms. Nettesheim's rebuttal report, she responds to our finding that the analyst reports on January 5, 2000 reveal "absolutely no information regarding the booking of unapproved claims on fixed-price contracts."

---

31. We can find no indication in the Nettesheim Report, or in any of the materials referenced by Ms. Nettesheim, what was revealed by Halliburton to Carol Lau in the referenced conversation.

32. Nettesheim Report, ¶88.

Her response is that the content of these analyst reports proves loss causation because they "reveal, in part, the true state of the Company's operating income."[33] It is our understanding, however, that the *Flowserve* court rejected this "true financial condition" theory. The Flowserve court ruled:

> [t]he more serious shortcoming, however, is the use of Plaintiffs' expert of the "true financial condition" theory ... In effect, Plaintiffs' expert leads the Court to a dangerous precipice. Under his logic, the relatedness tests set forth in *Dura* and *Greenberg* are optional. Rather than follow precedent, a plaintiff, like here, with debatable evidence of fraud can pick the largest stock drop irrespective of the actual reason and still relate the fraud because the stock drop is nevertheless a revelation of the company's true financial health.[34]

October 25, 2000

With regard to October 25, 2000, Ms. Nettesheim states:[35]

> After market close on October 24, 2000, while announcing its third quarter earnings

33. Nettesheim Rebuttal, ¶77.

34. *Ryan v. Flowserve Corp., et al.*, No. 03-CV-1769-B (ND Tex. Nov. 13, 2007), p. 23-24.

35. Nettesheim Report, ¶93.

> release, the Company made a partial disclosure concerning the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger. ... A significant portion of the negative news, as attributed to the Company, in news reports and by analysts, was related to the problems with the engineering and construction units that Lead Plaintiff alleges could have been and should have been revealed earlier. Thus, a significant portion of the stock price decline on October 25,2000 was related to the Company's booking unapproved claims on fixed-price contracts and lack of benefits from the Dresser merger alleged in the Complaint.

Ms. Nettesheim's logic is flawed. Ms. Nettesheim claims that if she finds that a price decline is related to E&C, then it is a curative disclosure of the company's booking of unapproved claims. There is no basis for her conclusion that E&C, a major segment of Halliburton's business, is synonymous with the allegations regarding unapproved claims. We found no evidence of a curative disclosure of the allegations regarding the booking of unapproved claims on October 25, 2000.

December 22, 2000

With regard to December 22, 2000, Ms. Nettesheim states:[36]

---

36. Nettesheim Report, fn. 61.

Appendix F

> The charges for cost overruns that were announced in December 2000 make clear that the problems in the engineering and construction were related to the large, fixed-price contracts and, therefore, the negative news on October 24 and 25, 2000, is a partial disclosure related to the Company's booking unapproved claims on fixed-price contracts and the lack of benefits from the Dresser merger alleged in the Complaint.

Ms. Nettesheim claims that if a price decline is related to large fixed-price contracts, then it is a curative disclosure of the allegations regarding booking of unapproved claims.[37] Ms. Nettesheim's analysis makes sense only under the premise that there are no possible problems that can occur with fixed-price contracts other than those related to the booking of unapproved claims. This premise is false, however, because problems with fixed-price contracts can occur independent of how unapproved claims are booked. Further, while analysts discuss cost overruns, they attribute these overruns to changes in market conditions, specifically to labor disturbances in Venezuela and West Africa.[38] In her rebuttal report, Ms. Nettesheim's response to these criticisms is that the allegations regarding unapproved claims "pertain to the undisclosed true probability of such

---

37. See section V.C.3.

38. "Labor disturbances in Venezuela and West Africa caused significant costs to be incurred on several large fixed-fee E&C contracts." [CIBC World Markets, December 22, 2000]

cost overruns and that Halliburton had not disclosed such cost overruns."[39]

b. Risks of cost overruns connected to fixed-price contracts were known by the market before the alleged curative disclosures

Although some of the disclosures alleged by Ms. Nettesheim as being curative relate to fixed-price contracts, we find no indication that they relate to the accounting issue of the booking unapproved claims as revenue. The fact that fixed-price contracts were at risk of cost overruns was known by the market even before the beginning of the alleged class period.

> The company will be undertaking large, lump sum fixed price contracts. The potential for cost overruns, and lower earnings from some of this work, will be an ever-present risk. [Prudential Securities, April 7, 1998]

> Engineering and construction is an inherently risky business, as any number of problems can arise when transforming a project idea into a physical reality .... The segment also began accepting a greater level of project risk by offering gain sharing or fixed price contracts. [Robinson-Humphrey, October 3, 1998]

> The company will be undertaking large, lump-sum fixed-price contracts. The potential for cost

39. Nettesheim Rebuttal, ¶79.

overruns is an inherent risk of those businesses. [Prudential Securities, October 7, 1998]

c. Ms. Nettesheim's event study analysis shows that there was no statistically significant price reaction to the actual disclosure of the change in accounting for unapproved claims

The alleged disclosures that Ms. Nettesheim claims are curative of the allegations regarding unapproved claims are not, in fact, curative of the allegations. There is, however, an actual curative disclosure of the alleged misrepresentation regarding the accounting of unapproved claims.

On March 14, 2000, the change in Halliburton's accounting practices relating to the booking of revenues related to claims and change orders was disclosed to the market in the company's Form 10-K. This filing included the amounts booked as revenue for claims and change orders for 1998 and 1999.[40]

The Complaint alleges that March 14, 2000 was a partial curative disclosure.[41] Ms. Nettesheim should

---

40. See, Halliburton's Form 10-K filed March 14, 2000, p. 34

41. According to the Complaint ¶213: "Halliburton failed to disclose until 3/00, when the Company filed its 99 Form 10-K, that the Unapproved Claims on its [engineering, procurement and commissions] contracts were, in fact, being recognized as revenue before the customer had agreed to pay them and were, thus, a component of the Company's earnings."

have used an event study analysis to test the stock price reaction on this date rather than on the four dates on which no curative information was released. While her report does not specifically address this date, Ms. Nettesheim's event study analysis found no statistically significant price reaction on March 14, 2000, an actual curative disclosure of the unapproved claims allegations.[42]

4. Ms. Nettesheim does not prove loss causation for the asbestos reserves allegations

a. Ms. Nettesheim's loss causation analysis does not control for changes in the asbestos litigation environment

There is abundant evidence that the asbestos litigation environment in general changed from the beginning of the alleged class period to the end of the alleged class period. For example, a *Financial Times* article in January 2001 states:[43]

> Although asbestos-related problems for companies date back more than four decades, the issue and its effects have returned with court decisions in the past year. Unexpectedly large verdicts against asbestos defendants in the first half of last year helped raise the bar for liability claims.

---

42. See First Allen Report, p. 32-33.

43. Bowe, Christopher. "Companies & Finance, The Americas - USG Takes Charge on Asbestos Litigation." *Financial Times*, January 12, 2001.

Appendix F

A September 2001 article in the insurance publication Best's Review described the changes in the asbestos environment as follows:[44]

> During 2000 and the first half of 2001, there has been a significant increase in the expectation of future payments for the defendants involved in asbestos litigation and the insurance companies that provided insurance coverage to them.
> ***
>
> The number of filings made against a number of defendants more than doubled in 2000 as compared to previous years.
> ***
>
> As the resources available to compensate claimants have been depleted due to bankruptcies of defendants, the cost of compensating claimants is being shifted to others. Plaintiff lawyers, in an effort to procure full value for their clients, have been demanding increases in contributions from the solvent companies, and have also cast their net wider to include new defendants.
> ***
>
> Eight companies mired in asbestos litigation have declared bankruptcy in 2000 and the first

44. Bhagavatula, Raji, et al. "Asbestos: A Moving Target." Best's Review, Volume 102, Issue 5. September 1, 2001

> half of 2001, asserting that the court system has ceased to make a fair determination of their asbestos-related liability and that any legislative solution appears unlikely.
> ***
>
> These estimates are significantly higher than estimates made by many experts just a few years ago.
> ***
>
> Individual defendants have experienced significant increases in both the number of claims filed and their average payment per claim, increases far beyond those projected a few years ago.

b. Ms. Nettesheim does not tie the alleged curative disclosures to the allegations

Ms. Nettesheim claims that she adequately tied her alleged curative disclosures to alleged misrepresentations and omissions.

> "The misrepresentations and omissions have been adequately tied to the curative disclosures," [Nettesheim Rebuttal, p. 4]

She has not done that. Asserting alleged curative disclosures are adequately tied is not the same as actually linking them to an alleged misrepresentation. For example, according to Ms. Nettesheim, a mention of

asbestos claims or liability is enough to link an alleged curative disclosure to the alleged fraud.

> A. It relates to the allegations regarding the under reserving of the asbestos reliability [sic].
>
> Q. How does it relate?
>
> A. It is talking about asbestos claims and the potential asbestos liability of Halliburton .
>
> Q. And that's a sufficient link in your mind?
>
> A. Yes. [Nettesheim Deposition p. 124]
>
> And similarly, later on in her deposition, Ms. Nettesheim testified:
>
> A. No. As I said, I did not go back and match this particular disclosure with a prior specific statement. [Nettesheim Deposition p. 138]

Plaintiff admits that Ms. Nettesheim did not link corrective disclosures to specific misrepresentations:

> [S]he testified in her deposition that she did not link a particular corrective disclosure to a single misrepresentation ... [Opp Mot Strk Nettesheim, p. 13]

c. Ms. Nettesheim does not show that the alleged curative disclosures are actually curative of the alleged misrepresentations regarding asbestos reserves

Ms. Nettesheim's loss causation analysis does not take into account the specifics of the allegations regarding asbestos reserves. Plaintiff alleges that the asbestos reserves were misleading, and Ms. Nettesheim claims to determine whether disclosures during the alleged class period were curative of this allegedly misleading information. According to Ms. Nettesheim, however, she does not have an understanding of how Halliburton's asbestos reserves were estimated, nor how the market perceived how the estimation was made.[45]

45.

Q. Let me ask it this way: You understood, did you not, that throughout the class period, or at no time during the class period did Halliburton suggest to the marketplace that its current asbestos reserve was intended to apply to whatever future exposure the company had to asbestos, no matter how far down the road?

A. As I said earlier, I don't have a specific -- I didn't think of it in that way. [Nettesheim Deposition, p. 115-116]

Q. You don't recall seeing the company's description of the asbestos reserves and its methodology for it?

A. I recall looking at it generally, but that wasn't something I was looking at specifically so I don't recall specifically what was said.
* * *

Appendix F

Without an understanding of what Plaintiff alleges the misrepresentations regarding the asbestos reserves are, what the asbestos reserves represented, and what the market believed the reserves represented, Ms. Nettesheim cannot reliably test whether an announcement about asbestos was a curative disclosure of the alleged misrepresentations regarding asbestos reserves.

At the time of the alleged curative disclosures related to asbestos, analysts and market commentary commented that the asbestos litigation environment is unpredictable and often irrational, as the following two examples illustrate.

> We continue to monitor the situation closely and we recognize the unpredictability and apparent irrationality of the asbestos litigation environment in general. [Salomon Smith Barney, October 31, 2001]

> Results of asbestos litigation have proven to be unpredictable and often irrational. The number of claims submitted to Halliburton doubled in

---

Q. And would you agree with me that all of the analysts who were following Halliburton whose reports you saw at least understood that Halliburton was reserving only for pending or open asbestos claims as opposed to whatever the future universe of asbestos claims may be?

A. You would have to show me the specific analyst reports. [Nettesheim Deposition, p. 116-117]

> 2Q01 sequentially, then dropped in the following quarter. Overall, claims have risen in recent years and show no signs of subsiding. Also, while the settlement process tends to produce reasonable and predictable results, venue shopping and unpredictable juries increase the likelihood of occasional large judgments, as recently seen. [Jefferies, December 10, 2001]

Ms. Nettesheim presents no evidence that any analyst or market commentary on the dates of any of the alleged curative disclosures suggested any falsity in any prior statements that the company had previously made about asbestos or asbestos reserves. We conducted a review for such evidence and could not find a single statement that suggested any such falsehood.

D. There is no evidence in Ms. Nettesheim's analysis that the alleged misstatements inflated Halliburton's stock price

Plaintiff alleges that Halliburton made "a series of false and misleading statements that misrepresented the condition and success of Halliburton's business"[46] and that this resulted in "artificial inflation in Halliburton's stock price ... during the Class Period."[47] We reviewed the Complaint for all dates during the alleged class period on which Plaintiff alleges that misstatements were made and thereby allegedly inflated Halliburton's stock price.

---

46. Complaint, ¶2.

47. Complaint, ¶3.

We then reviewed Ms. Nettesheim's analysis to determine whether, according to her analysis, the alleged misstatement resulted in a statistically significant increase in Halliburton's stock price. As detailed in the First Allen Report, we found that, according to Ms. Nettesheim's event study analysis, there is no statistically significant stock price increase that can be associated with any of the alleged misstatements in the Complaint.[48]

Ms. Nettesheim in her rebuttal report makes the following statement without any support or further explanation:

> The absence of statistically significant stock price increases upon each date of a misrepresentation or omission is not unexpected and does not undermine my conclusion that Halliburton's stock price was inflated during the Class Period.[49]

It is not clear why Ms. Nettesheim does not see the lack of price movement to the alleged misrepresentations as undermining her conclusions. Plaintiff's claim is that the alleged misrepresentations inflated the price and that the price declined when information curative of the alleged misrepresentations was released to the market. Ms. Nettesheim's own analysis does not support the claim that the price is inflated by the alleged misrepresentations. Ms. Nettesheim nonetheless claims she has proven inflation because she has proven that the stock declined at the

48. See First Allen Report, p. 41-45.

49. Nettesheim Rebuttal, ¶6.

alleged curative disclosures. She offers no explanation as to why the lack of price movement at the time of the misrepresentation is "not unexpected."

E. Ms. Nettesheim's Event Study is Methodologically Flawed and Her Tests of Statistical Significance Are Invalid

In the First Allen Report, we detailed how Ms. Nettesheim's event study is methodologically flawed and her tests of statistical significance are invalid.[50]

Ms. Nettesheim performed an event study as the basis for her claim of having proven loss causation. Her event study, however, is methodologically flawed. Ms. Nettesheim first conducted a hypothesis test (actually, 633 hypothesis tests) to determine whether any of the days during the alleged class period exhibited a statistically significant price reaction. Then, for those days on which she found statistically significant price reactions, she reviewed news and analyst commentary to determine whether they contained news related to the allegations.

This procedure is methodologically flawed because her tests of statistical significance are invalid, and because her news analysis is not at all systematic.

The valid statistical methodology for conducting a hypothesis test is to *first* state a hypothesis to be tested (e.g., whether a particular piece of news has a significant effect on the price), and *then* perform the test. Ms.

---

50. First Allen Report, p. 7-15.

Nettesheim inverts the order of these steps by performing a hypothesis test for each day during the alleged class period, thereby invalidating her tests.[51]

51.

Q. What you did was you looked at every day during the class period and then determined which days had statistically significant returns, correct?

A. That's one of the many things that I did.

Q. An alternative approach would have been to look at the dates alleged in the complaint and determine if on those dates there was a statistically significant return?

A. It's not an approach that related to what I was doing. [Nettesheim Deposition p. 41]

A. I did not look at every Halliburton statement during the class period and then look to see whether or not the stock price went up.

Q. Sure. What you did was you looked at the dates in which there was a statistically significant return with a positive or negative, correct?

A. Correct [Nettesheim Deposition p. 75]

Q. So how did you begin trying to ascertain the loss causation aspects of this case?

A. After collecting the data, then we did statistical analyses which entailed forming an industry index, and after several steps, went through to form the industry index and did a regression analysis to

Appendix F

1. Ms. Nettesheim's discussion of the significance at the 95% level is misguided

Ms. Nettesheim states:[52]

> Ms. Allen contends that the number of statistically significant days is 'no more than the number expected' and thus, 'yields no evidence that the stock price declines during the alleged class period are caused by anything other than the normal daily variation in stock price.' This statement is misleading and erroneous.

On the contrary, this statement from the First Allen Report quoted by Ms. Nettesheim is correct. Ms. Nettesheim's discussion of the Allen statement contains no references, academic or otherwise, and is contrary to fundamental statistical theory and principles.

> determine the relationship between Halliburton and the stock returns and returns on a market index, industry index. [Nettesheim Deposition p. 18]
>
> Q. But what you were doing was trying to determine loss causation as opposed to materiality, recognizing that oftentimes there is overlap between these different elements of a fraud claim?
>
> A. I discussed materiality, and I think that in the loss causation section, I looked at events where there were statistically significant company specific returns, but that does not ignore materiality. [Nettesheim Deposition p. 34]

52. Nettesheim Rebuttal, ¶33.

Appendix F

The test statistic performed by Ms. Nettesheim is conducted at the 95% confidence level.[53] By construction, the 95% confidence level is expected to yield a false positive 5% of the time. In other words, the test statistic used by Ms. Nettesheim is designed so that 5% of the time the test is expected to indicate statistical significance when there is *no* company-specific news of importance to the market (that is, "under the null").[54] If the null is true, meaning, in this case, that there is no company-specific news, then 5% of the time the test will falsely indicate a statistically significant excess return.

The quote on statistical significance in the First Allen Report from the "Reference Guide on Statistics" part of the *Reference Manual on Scientific Evidence,* published by the Federal Judicial Center, confirms this well known and fundamental principle of statistical hypothesis testing:

> **[M]ultiple comparison.** Making several statistical tests on the same data set. Multiple comparisons complicate the interpretation of a *p*-value. For example, if 20 divisions of a company are examined, and one

53. In this section we are discussing statistical significance at the 95% confidence level *as if* Ms. Nettesheim had performed all the rest of her analysis correctly. We have discussed both in the First Allen Report and in this report many other reasons why Ms. Nettesheim's analysis is erroneous and unreliable.

54. Miller, Irwin and Marylees Miller. John E. Freund's Mathematical Statistics with Applications, Seventh Edition, Pearson Prentice Hall, 2004, p. 377.

> division is found to have a disparity "significant" at the 0.05 level, the result is not surprising; indeed, it should be expected under the null hypothesis. [Kaye, David H. and David A. Freedman, "Reference Guide on Statistics", *Reference Manual on Scientific Evidence*, (2000, Federal Judicial Center, Second Edition), p. 166]

Ms. Nettesheim repeats this basic principle of hypothesis testing levels:

> The significance level of a test is the probability of making a decision to reject the null hypothesis when the null hypothesis is actually true (i.e., to make a decision that the residual return was not due to chance when it actually was due to chance). [Nettesheim Rebuttal ¶32]

Yet, Ms. Nettesheim fails to understand the implication of this basic principle to her analysis. Under the null, i.e., when in truth there is no material company-specific news, if the test is performed 633 times, we would expect on average to find that 5% of the time, or approximately 32 times, the price movement is statistically significant even though there is no material news. After performing her test 633 times, Ms. Nettesheim finds 31 statistically significant events, thus, no more than expected in the absence of any material news.

Appendix F

The introduction to *Multiple Comparisons and Multiple Tests*, a manual on how to perform analyses that involve multiple statistical tests, explains this problem with Ms. Nettesheim's methodology:

> Practically every day, you find in the newspaper or other popular press, some claim of association between a stimulus and outcome, with consequences for health or general welfare of the population at large. Many of these associations are suspect at best, and often do not hold up under scrutiny ...
>
> How do such incorrect conclusions become part of the scientific and popular landscape? While scientists typically fault such things as improper study design and poor data, there is another explanation that is the focus of this book. Data analysts can easily make such incorrect claims when they analyze data from large studies, reporting any test that is "statistically significant" (usually defined as "$p < 0.05$," where "p" denotes "p-value") as a "real" effect. On the surface, this practice seems innocuous. After all, isn't that the rule we learn in statistics classes-to report results where we find "$p < 0.05$" as "real"?
>
> The problem, briefly stated, is that when multiple tests are performed, "$p < 0.05$" outcomes can often occur even when there are no real effects. Historically, the rule was

devised for a single test, with the following logic: if the $p < 0.05$ outcome was observed, then the analyst has two options. He or she can believe that there is no real effect, and that the data are so anomalous that they are within the range of values that would be observed only 1 in 20 samples; or, he or she may choose to believe that the observed effect is real. Because the 1 in 20 chance is relatively small, the common decision is to "reject" the hypothesis of no real effect, and "accept" the conclusion that the effect is real.

This logic breaks down when you consider multiple tests or comparisons in a single study. If you consider 20 or more tests, then you expect at least one "1 in 20" significant outcome, even when none of the effects are real. Thus, there is little protection offered by the "1 in 20" rule, and incorrect claims can result. While problems of faulty study design, bad data, etc., can and do cause faulty conclusions, you should be aware that multiplicity is also a likely cause, especially in large studies where many tests or comparisons are made. Such studies are common, as the following examples indicate.

Further, Ms. Nettesheim erroneously claims that:

Ms. Allen's assertion that one would expect 5% of the days during the Class Period to be

> significant would only be true if the control period is the same as the Class Period. [Nettesheim Rebuttal ¶34]

Ms. Nettesheim's statement is not only contradicted by the quote above from the Federal Judicial Center, but also reveals a deep misunderstanding of both the test she performs and the underpinnings of the event study methodology. Ms. Nettesheim provides no academic citation for her statement.

Contrary to Ms. Nettesheim's claim, it is not necessary that the control period and the alleged class period be the same period for one to expect 5% of the days to be significant even in absence of any fraud. In fact, one of the underpinnings of the event study methodology is that the relationship between Halliburton's stock and the market and industry indexes should be the same over the control period and the alleged class period.

If the relationship between Halliburton's stock and the market and industry indexes is not the same in the control period and the alleged class period, then Ms. Nettesheim's analysis is contrary to the underpinnings of the event study methodology and her results are unreliable. Ms. Nettesheim seems to agree that the relationship should be the same over the control period and the alleged class period for the analysis and results to be reliable.[55]

---

55. "It is important to select a control period that is representative of the company during the Class Period and with as little impact as possible from the fraud in determining the normalized relationship between a company's stock price returns and the returns on a market index and an industry index." [Nettesheim Rebuttal, ¶51].

Appendix F

F. Ms. Nettesheim's Results Are Not Robust or Reliable

1. The fact that Ms. Nettesheim's results change dramatically with a different control period is evidence that her methodology and conclusions are not reliable

The First Allen Report stated that:

> More importantly, this change shows that her results are not robust. Applying the regression results based on this alternative control period, we found that there was no longer any statistically significant price decline on most of Nettesheim's alleged curative disclosure dates. We find that 9 of her 11 alleged curative disclosure dates are not statistically significant if we apply her methodology and simply change the control period from being a one-year period that starts before the alleged class period to a one-year period that starts after the alleged class period. [p. 14]

Ms. Nettesheim responded as follows:

> Ms. Allen contends that my findings are not "robust" based on her analysis of an alternative control period—a one-year period that begins after the Class Period. She is incorrect, my findings are "robust," as demonstrated below, and it is her alternative control period that is arbitrary and irrelevant.

Appendix F

> It is important to select a control period that is representative of the company during the Class Period and with as little impact as possible from the fraud in determining the normalized relationship between a company's stock price returns and the returns on a market index and an industry index. The control period I used is more highly correlated and representative of Halliburton stock price returns during the Class Period than the control period proposed by Ms. Allen. [Nettesheim Rebuttal, ¶50, 51]

Ms. Nettesheim appears to miss the point made in the First Allen Report. Our point was that her findings are not robust and reliable, not that the later control period is more appropriate.

The evidence Ms. Nettesheim presents in her rebuttal report to address this criticism not only fails to address the criticism, but also undermines Ms. Nettesheim's claim that her results are robust and reliable.

For example, in her response, Ms. Nettesheim performs her analysis using another alternative control period that yields 19 new statistically significant dates,[56] a more than 60% increase in the number of statistically significant days from the analysis in her first report. Ms. Nettesheim offers no explanation as to why this new

---

56. Nettesheim Rebuttal, ¶54. Footnote 14 states, "There are 19 additional significant dates using the 2000-2001 control period."

control period would so dramatically affect her findings of statistical significance.[57]

Although Ms. Nettesheim claims that the post-class control period used in the First Allen Report is inappropriate, none of the academic literature she cites supports her claim, and much of it directly contradicts her claim.[58]

Further, Ms. Nettesheim claims that the post-class control period is less suitable in part because Halliburton had restructured its E&C business such that it was a "different company from what it was prior to the class period." Yet, Ms. Nettesheim used her control period (which is entirely pre-restructuring of E&C) to test the movement of Halliburton's stock *after* the company's restructuring of its E&C business. Her argument, therefore, undermines her own choice of control period for

---

57. Note that, according to Ms. Nettesheim, her alternative control periods do not, however, change her ultimate conclusion regarding loss causation. As discussed elsewhere in this report, her methodology does not reliably test loss causation.

58. For example, the Marais and Schipper article cited by Ms. Nettesheim states that the control periods, both before and after the event period, can be used. [p. 23] Further, according to Tabak and Dunbar: "There are three general choices for the placement of an estimation window: before the event window, surrounding the event window, and after the event window." [p. 9]

Also, according to the Marais and Schipper article cited by Ms. Nettesheim, "Analysts ... cannot include returns during a period of alleged fraud" in their estimation period. [p. 21]

the analysis of disclosures after the E&C restructuring, because her control period is not representative of the post-restructuring of E&C part of the alleged class period, according to her logic.

Again, our point is not whether one control period is better than another, but that the change in her findings that result from a change in the control period is evidence that her findings are not robust and reliable.

2. The unreliability of Ms. Nettesheim's methodology is illustrated by the unreasonable conclusions that result when her method is applied to McDermott

To illustrate that Ms. Nettesheim's test of loss causation is unreliable, we used her same methodology of testing loss causation and applied it to a different company, McDermott International, Inc. ("McDermott").[59] We showed that her methodology is unreliable and yields positive results for loss causation regardless of the underlying true situation — i.e., her test of loss causation found inflation and loss causation even when there was no underlying fraud or even allegation of fraud. Despite the fact that McDermott had no allegations of fraud similar to those of Halliburton, using her methodology, we were able to similarly "prove" that McDermott's price was inflated and that there was loss causation. In fact, using her methodology, we are able to "prove" inflation and loss causation for McDermott's misleading accounting for unapproved claims, despite the fact that there is no indication that McDermott had any such problem.

---

59. See First Allen Report section XII.

Appendix F

Ms. Nettesheim in her Rebuttal Report responded to our illustration that her methodology is unreliable and yields positive results for loss causation regardless of the underlying true situation. Her response was as follows:

> Allen's analysis of loss causation for Halliburton peer McDermott International, Inc. is misleading, erroneous and irrelevant. Without any reasonable assumptions regarding allegations concerning McDermott, she has no basis for her conclusions regarding loss causation. [Nettesheim Rebuttal ¶37, internal parenthetical omitted]

This is exactly our point. The methodology used by Ms. Nettesheim to test inflation and loss causation is misleading, erroneous and irrelevant. Her conclusions are completely unreliable; using her test one can conclude there is loss causation even in situations where there is clearly no inflation and no price decline related to an alleged fraud. A test is not reliable if, regardless of the underlying condition under study, it yields a positive result.

G. None of the Academic Literature Cited by Ms. Nettesheim is Consistent with Her Approach

Ms. Nettesheim claims her loss causation analysis using her event study is reliable and based on accepted methods.[60] In support of this claim, Ms. Nettesheim and

60. Nettesheim Rebuttal, p. 6-13.

Appendix F

Plaintiff cite five academic articles - Marais and Schipper,[61] Eisenhofer, *et al.*,[62] Koslow,[63] Mitchell and Netter,[64] Tabak and Dunbar.[65]

Contrary to Plaintiff and Ms. Nettesheim's claim, however, all five of these articles contain evidence that Ms. Nettesheim's event study is unreliable and not based on accepted methods. Some of the reasons are detailed below.

---

65. Tabak, David I. and Frederick C. Dunbar, "Materiality and Magnitude: Event Studies in the Courtroom," National Economic Research Associates, Working Paper #34. April 1999 ("Tabak and Dunbar").

Appendix F

Ms. Nettesheim fails to identify event dates first, as called for by the academic literature cited

For example, according to the literature cited:

> PERFORMING THE BASIC EVENT STUDY
> *Identifying the Event*: Many texts discuss how to perform the event study. While there are some differences in exposition, there is a uniform agreement in the literature on the necessary steps and general procedures to be followed. First, one must identify the event or events to be studied. [Tabak and Dunbar, p. 7]

> There are three basic steps in conducting an event study: (i) define the event window; (ii) calculate abnormal stock price performance around the event; and (iii) test for statistical significance of the abnormal stock price performance. ... The first step in the event study is selecting an event window. The event window is the period when information about the event becomes available to the stock market and thus may affect the relevant company's stock price. [Mitchell and Netter, p. 557-558]

Ms. Nettesheim fails to account for confounding factors as described by the academic literature cited

For example, according to the literature cited:

> Clearly, security returns react to causes other than the announcement under consideration. To

> assess the effect of the announcement itself ... the study should ideally identify those causes and remove their effects from the data. [Marais and Schipper, p. 17A-6]

> [P]roblems [that] require additional financial analysis ... A lack of direct correlation between the initial fraud and subsequent disclosures: Frequently, frauds are cured by corrective statements that also contain additional information, leading to problems of "over-disclosure" and "under-disclosure." It does not follow then that the market's reaction to a curative statement is attributable purely to fraud-related information. [Koslow, p. 6]

Ms. Nettesheim fails to link the alleged curative disclosures to prior alleged misstatements as described in the academic literature cited

For example, according to the literature cited:

> First, the analysis can address whether ... a statistically reliable link exists between the information event in question and stock price responses. For example, in securities litigation over allegedly defective disclosures, financial experts must link the share-price reaction to the alleged correction of the allegedly defective prior disclosures or omissions. [Marais and Schipper, p. 17A-8]

Appendix F

Ms. Nettesheim fails to compare news days to non-news days as described in the academic literature cited

For example, according to the literature cited:

> Thus, the problem of assessing the evidence for a material market effect reduces to that of comparing the event-day return to the nonevent...returns... [Marais and Schipper, p. 17A-6]

Ms. Nettesheim fails to address several other issues as described in the academic literature cited

For example, according to the literature cited:

> [C]alculations should be based not on whether the market was efficient or inefficient, but rather on whether the fraud was sufficiently material to have a statistically significant impact on the market price, given the degree of market efficiency. [Koslow, p. 3]

Yet, Ms. Nettesheim's calculations are based on her finding of market efficiency, rather than the "degree of market efficiency." The literature cited also notes:

> During a prolonged class period, particularly when other major changes in company operations accompany the fraud, the beta may change suddenly and by a significant amount. .. [Koslow, p. 5]

Yet, despite a prolonged alleged class period in this matter, Ms. Nettesheim did not test whether the beta (the relationship between the movement in Halliburton's stock price and the market) may have changed during the alleged class period.

H. Ms. Nettesheim Offers No Evidence That Her Loss Causation and Event Study Methodology is Court-Approved

Ms. Nettesheim states that:[66]

- The courts in *Enron* and *WorldCom* have approved the methodology she used in this matter; and
- She has used the same methodology she is using in this case in *Homestore* and *Vivendi*.

Ms. Nettesheim claims that her colleague, Blaine Nye, used in *WorldCom* and *Enron* the same event study methodology that she is using in this matter. Ms. Nettesheim also claims that the *WorldCom* and *Enron* courts accepted Dr. Nye's methodology.[67]

We found no evidence that Dr. Nye submitted any loss causation analysis in the *Enron* matter. Dr. Nye's declaration dated January 2006 reads:

> "This Declaration on efficiency of markets for Enron securities is not a damage study, or a

66. Nettesheim Rebuttal, ¶11.

67. Nettesheim Rebuttal, ¶11.

> calculation of damages, or a determination regarding loss causation, and should not be construed as such." [Declaration of Blaine F. Nye, Ph.D. in Support of Lead Plaintiff's Amended Motion for Class Certification (Docket No. 1445), January 6, 2006, ¶196, p.89]

In addition, the methodology used by Dr. Nye in *WorldCom* is not the same as that used by Ms. Nettesheim in this matter. Unlike the methodology employed by Ms. Nettesheim, Dr. Nye analyzed the stock price reaction to misrepresentations and his analysis of loss causation did not appear to start with a list of statistically significant price reactions and then to proceed to an examination of whether information related to the alleged fraud was released on those dates.[68] Dr. Nye's *WorldCom* report has a section entitled "Causation" in which he details the alleged misrepresentations and associated stock price movements and the alleged curative disclosures and their stock price movement.[69] This section includes a discussion of alleged disclosure dates that, according to his event study analysis, did not have a statistically significant price decline. In addition, the method used by Dr. Nye

---

68. See fn. 51.

69. "This section describes certain disclosures by the Company that are alleged to have been misleading or omitted to disclose important information regarding WorldCom's revenue and earnings and its prospects and how these misrepresentations and omissions caused WorldCom's securities prices to be inflated during the Class Period. This section also describes how certain disclosures later in the Class Period and at the end of the Class Period caused the securities prices to decline." [Expert Report of Blaine Nye, Ph.D., August 20, 2004, ¶30]

to construct his industry index is not the method used by Ms. Nettesheim in this matter. Dr. Nye did not select companies for inclusion in his industry index on the basis of a statistical technique.[70]

Ms. Nettesheim's event study methodology as described in *Homestore* differs from her methodology in *Halliburton*. In *Homestore*, Ms. Nettesheim analyzed stock price reactions on dates on which allegedly misleading information about Homestore's financials was released (thereby causing the stock price to increase), and tied these alleged misstatements to corrective disclosures made later (which caused the stock price to decline).

> This section describes certain disclosures by the Company that were misleading or omitted to disclose important information regarding Homestore's financial condition and its prospects and how this caused the stock price to be inflated during the Class Period. This section also describes how certain partial disclosures of Homestore's true financial condition late in the Class Period caused the stock price to decline. [Expert Report of Jane D. Nettesheim dated January 16, 2004 ¶61]

---

70. Moreover, Dr. Nye's opinion in *WorldCom* regarding negative causation was struck by the court. The *WorldCom* Court found: "The Underwriter Defendants' motion *in limine* is granted to the extent of striking Nye's opinions that there is 'no offset for negative causation... '" *In re WorldCom, Inc. Sec. Litig.*, No. 02 Civ. 3288 (DLC), 2005 U.S. Dist. LEXIS 2216, *19-23 (S.D.N.Y. February 17, 2005)

Ms. Nettesheim does not use this approach in *Halliburton*. Rather than performing an event study on pre-determined event dates, she analyzes Halliburton's stock price reactions on all dates during the alleged class period.

Plaintiff and Ms. Nettesheim have not provided her report in *Vivendi* or any evidence Ms. Nettesheim's event study methodology in *Vivendi* is equivalent to her methodology in *Halliburton*. The only comment regarding Ms. Nettesheim's report in the *Vivendi* court's decision provided by Plaintiff's counsel in this matter says that Ms. Nettesheim opined that the markets for Vivendi shares in Europe and the US are highly integrated and that therefore this supports *Vivendi* Plaintiffs' claim that one class rather than two was appropriate. The decision has no mention of event studies and does not address loss causation.

I. Response to Miscellaneous Points Made in Nettesheim Rebuttal

1. Ms. Nettesheim claims that her news analysis is not complete

Ms. Nettesheim states:

> It is not possible to obtain at this time all news that was available to market participants during the Class Period; for example, I know that I have do not have [sic] First Call reports or all of the analyst reports that were published during the Class Period. Furthermore, there very

> likely are other types of relevant information about Halliburton that was of interest and available to market participants during the Class Period that we will never know existed. Thus, to segregate days during the Class Period into "news days" and "non-news days" is a meaningless exercise at this time. [Nettesheim Rebuttal ¶37]

If at this point in her research, Ms. Nettesheim feels that she does not have enough information to segregate the days in the alleged class period into news days and non-news days, then her research is too preliminary for her to be able to draw reliable conclusions regarding the cause of Halliburton's stock price movement. Ms. Nettesheim appears to believe that she is likely missing material news on days that can explain statistically significant price reactions. Given that her search for news covered the entire class period, it would therefore seem likely that she would be missing material news on other days, including those days that she claims are curative disclosures. How can she be confident, then, that she is not missing non-culpable news that actually caused the price reactions on her dates of alleged curative disclosures? Or how can she be confident that the allegedly culpable news was not, in fact, released prior to the alleged price declines and, therefore, could not have been the cause of those declines? If her knowledge of news is such that she is unable to classify days into news days and non-news days, her results cannot be reliable.

2. The difference between Ms. Nettesheim's market data and CRSP data is not *de minimis*

The First Allen Report explained that we were unable to identify Ms. Nettesheim's market index and that CRSP, the data provider Ms. Nettesheim allegedly used, similarly could not identify her data series or substantiate that CRSP was the source of the data.[71]

Ms. Nettesheim claims that the differences between the data she used and the CRSP data are *"de minimis."*[72] Yet the returns she used and the CRSP returns differ by more than 5% on 251 days out of the 633 trading days during the alleged class period. Moreover, on five of the days the two different datasets have the market moving in *opposite* directions—for example, the data we obtain from CRSP records the market going down on February 4, 2000 while the data she used records the market going up on that day.

Ms. Nettesheim now claims that she obtained the data from CRSP years ago and that differences between her data and the CRSP data are due to "a change by a third party data provider of the price of some stocks other than Halliburton during the Class Period."[73] Ms. Nettesheim's claim that this difference is the result of the data provider changing the price of stocks is unsupported and unbelievable.

73. See Nettesheim Rebuttal, ¶6.

Appendix F

VI. RESPONSE TO SPECIFIC POINTS IN PLAINTIFF'S OPPOSITION TO MOTION TO STRIKE THE NETTESHEIM REPORT

In the table below, we summarize the claims and allegations made by Plaintiff in its Opposition to Motion to Strike Expert Report of Jane Nettesheim in the left hand column and our response in the right hand column. Note that many of the issues addressed above are also relevant here.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
I. NETTESHEIM'S METHODOLOGY IS PROPER AND APPROPRIATELY APPLIED. A. Nettesheim's Methodology Is Sound.	
• In Nettesheim's Rebuttal Report, Nettesheim began her event study by reviewing the Complaint to identify the alleged misrepresentations and the alleged partial disclosures.	Whether she did or did not read the complaint first is not the point. Her methodology is inappropriate for the reasons discussed in other sections of this report and the First Allen Report. (See sections V.C, V.D, V.E, V.F and V.G in this report.)
• Nettesheim's event study methodology is the same methodology that she has employed in other securities actions and has been accepted by courts in other actions.	The cases cited do not support this claim. (See section V.H above.)

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
• Nettesheim's methodology is fully consistent with the description in the literature and case law of the proper way to conduct an event study.	Nettesheim's methodology is not consistent with any of the academic literature or cases cited. (See section V.G.)
• Allen's misunderstanding of the Nettesheim Report may stem from the fact that Allen did not review the Appendix to the Nettesheim report.	The First Allen Report demonstrates that Allen reviewed and analyzed Nettesheim's Appendix.
• Allen's equivocal testimony and uncertain experience in ever having conducted a loss causation analysis undercuts whatever weight her assertions might otherwise carry.	Allen testified that she has conducted an analysis as to whether or not there was loss causation.[74]

74. Allen testified:

Q. Have you ever done an analysis as to whether or not there was loss causation?

A. Yes [Deposition of Lucy Allen, p.84, lines 11-13]

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
B. Nettesheim's Industry Index Was Properly Constructed. • Employing an objective and sound methodology with both theoretical and statistical measures.	Her industry index is not constructed appropriately for the tests she claims to perform. The industry index cannot test whether the price decline in Halliburton is due to industry problems with E&C or changes in the asbestos litigation environment, as opposed to revelation of any alleged fraud by Halliburton, since it does not control for changes in E&C or changes in asbestos.

Q. Let me ask that question. Have you ever done an analysis as to whether or not there was loss causation in a securities class action case?

A. Yes [Deposition of Lucy Allen, p.85, lines 6-10]

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
• Defendants criticize Nettesheim's market index because she did not include two stocks discussed in a single Merrill Lynch analyst report issued more than a year before the class period that mentioned Halliburton's E&C Group. The Merrill Lynch report only mentions these companies in passing.	(Presumably Plaintiff means "industry index" not "market index.") The Merrill Lynch report concerns the pending merger between Halliburton and Dresser and its effect on the E&C.[75] Many other sources during the class period including ones produced by Nettesheim indicate that Halliburton and these other companies are competitors in the E&C industry. Nettesheim claims that Halliburton's stock price declined because of problems related to E&C. The important point is not

75. The Merrill Lynch report reads

Merrill Lynch: Engineering & Construction

Reason for Report: Potential for Changes in E&C Valuation?

The pending acquisition of Dresser Industries by Halliburton is undoubtedly a deal driven primarily by issues in the oil services industry. But, in the process, a formidable engineering and construction company ... with $5 billion in revenues has been created and that new company could potentially change the E&C landscape ... [Merrill Lynch. March 13, 1998]

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
	which E&C companies are in an index, but that Plaintiff has some method of proving that the decline in Halliburton's stock price is not due to changes in the E&C industry overall (or asbestos environment overall) rather than alleged fraud.
• Halliburton is not an engineering and construction company.	Halliburton's business is not all E&C (approx 30-50% of annual revenues are E&C during the years of the class period); but Halliburton is one of the largest E&C companies in the world.[76] According to Nettesheim Rebuttal Report, Halliburton is the "leading engineering and construction company in the world."[77]

76. Computed as a ratio of revenues of the E&C segment (including BRES) to total Halliburton revenues for the years 1999-2001 as reported in 10-K for 2001, filed on March 12, 2002. See p. 15 and p. 17.

77. The Nettesheim Rebuttal ¶62 quotes a report by the analyst at Donaldson, Lufkin & Jenrette on March 1, 1999:

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
• There is no index described as an E&C index that includes Halliburton.	Whether or not a pre-made index exists does not relieve Nettesheim's burden to control for E&C industry effects. Since much of Halliburton's business is not E&C, Halliburton might not be included in an E&C off-the-shelf index, but the effect of the industry must still be addressed.
• The inclusion of the other two companies mentioned in the March 13, 1998, Merrill Lynch report would have no material impact on the overall industry index used in the Nettesheim Report.	That is not the point; averaging these two companies in with other 50 plus companies that are not related to E&C is still not going to help one determine whether any of Halliburton's stock price

---

Leading engineering and construction company in the world — The combination of Dresser's M.W. Kellogg subsidiary and Halliburton's Brown & Root subsidiary creates one of the largest and best positioned e&c companies with a worldwide presence and a number of unique technologies in diverse areas including LNG, ammonia, olefins and ethylene.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
Their inclusion does not change the statistical significance of any of the partial corrective disclosures related to the failed Dresser merger or the improper accounting for unapproved claims on long-term, fixed price contracts.	decline is due to alleged fraud regarding the integration of Dresser or accounting of unapproved claims, or, rather, due to a decline in the market for E&C. See graph above in section V.C.2.a.
• The adverse asbestos news that drove down Halliburton's stock price during the class period was Halliburton-specific asbestos news.	Although some of the news was specific to Halliburton, it was evidence of a change in the asbestos litigation environment.[78] If it only revealed information to the market regarding Halliburton's alleged fraud, then it would not have affected the stock prices of other companies.[79]

78. See section V.C.4.a.

79. See First Allen Report, p. 39-40.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
• Allen does not provide evidence to suggest that asbestos news about other companies depressed *Halliburton's* stock price during the class period or that Halliburton stock moved in sync with the stock of other companies with asbestos exposure during the class period.	This misses the point. If the alleged curative disclosure revealed that Halliburton has misstated its asbestos reserves in the past, then the stock prices of other companies with asbestos exposure, but no similar alleged fraud, would not decline. The fact that there was a decline in the stock prices of other companies with asbestos exposure that were not even named in the lawsuits indicates that the information was not specific to Halliburton and its alleged fraud but rather a potential change in the asbestos litigation environment.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
• Neither Defendants nor Allen provide any authority for the assertion that it would be proper to add to an industry index companies from outside a given industry on account of their asbestos exposure.	The literature cited by Ms. Nettesheim states that Plaintiff must prove that the price decline is due to the revelation of the alleged fraud.[80] The analyst and market commentary all indicate that the asbestos environment changed unexpectedly and that these verdicts were large and unprecedented. The Nettesheim index cannot test whether the price decline is due to the alleged fraud or a change in the environment.

80. See section V.G.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
C. Allen's Analysis of Nettesheim's News Days Is Flawed. • *Polymedica*, cited by Allen, is not relevant here. Nettesheim found that there were 31 days during the class period with statistically significant market movement, and determined that on more than two-thirds of those days, the movement was explained by release of company-specific news.	While the First Allen Report does not cite Polymedica, it is relevant here.[81]

81. See fn. 2 for detail on the *Polymedica* order.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
D. Allen's Criticism of Nettesheim's Calculation For Statistical Significance Is Without Merit. • Allen's claim that one would expect 5% of the days during the Class period to have a statistically significant return with a 95% confidence interval is true only if the control period is the same as the Class period.	Nettesheim's discussion of this claim is inconsistent with fundamental statistical principles in hypothesis testing. (See section V.E.1 above.)

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
• Defendants claim that Nettesheim's results are not reliable because she found a statistically significant return on 31 days and that, due to Nettesheim's use of a 95% confidence interval, which is no more than one would expect if the stock price was affected by random chance. A single example shows that assertion is untenable. (1) Allen balked at calling Halliburton's stock movement on December 7, 2001 random.	We do not claim there is no news that affects the stock during the class period; rather, we find that *her statistical analysis yields no evidence* that the stock price declines during the alleged class period are caused by anything other than the normal daily variation in stock price. See section V.E.1.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
II. NETTESHEIM CORRECTLY FOUND LOSS CAUSATION. A. The Corrective Disclosures Tie to the Prior Fraudulent Statements. • Nettesheim testified in her deposition that she did not link a particular corrective disclosure to any single misrepresentation.	Exactly.
• She did properly determine that the corrective disclosures were tied to the alleged misrepresentations and omissions in the complaint during the class period.	Ms. Nettesheim did not link alleged corrective disclosures to alleged misrepresentations. See sections V.C.3, V.C.4.b, and footnote 7.

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
• The record shows Allen misunderstood the complaint, as demonstrated by the following exchange in her deposition: Q: As you understand it, do the plaintiffs claim that one of the misrepresentations that Halliburton made was the assertion that Halliburton insurance should cover the majority of any future claims relating to asbestos? A: That's not my understanding. Allen Dep. at 120:3-9, PI. App. 103. (1) The Complaint quotes a July 26, 2001 UBS Warburg report, which said in pertinent part: "Mr. Lesar indicated	The alleged misrepresentation that Halliburton insurance should cover the majority of asbestos claims is not an allegation analyzed or specifically referenced by the Nettesheim Report, and the Nettesheim Report does not contend that information to the contrary was ever disclosed to the market place. Moreover, even at the end of the alleged class period, analysts still note that insurance will cover the majority of future claims

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
that HAL maintains a significant amount of insurance that should that should [sic] cover the majority of any future claims or increases in settlements rates."	relating to asbestos.[82] So the revelation of the alleged fraud related to this allegation cannot be the cause of the price decline.

---

82. For example, in the week following the last alleged curative disclosure about asbestos (the end of the alleged class period) an analyst for CIBC World Markets stated:

Negative impact limited by insurance and solid balance sheet. HAL has $2 billion in insurance to cover 95% of asbestos claims. As for the costs that are not covered by insurance, HAL is financially solid with a strong balance sheet and $250 million in cash. [CIBC World Markets. December 11, 2001]

Similarly, an analyst for RBC stated:

[t]he balance sheet is currently very strong, in our opinion, insurance protection is very high, and all of the recent verdicts are expected to be appealed. [RBC Capital Markets. December 10, 2001]

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
B. Nettesheim Performed An Empirical Analysis When Necessary to Disaggregate Culpable and Non-Culpable Bad News.	Not true; her only attempt at an "empirical analysis" is for October 24-25, 2000 (see below).
• October 4, 1999: (1) Neither market or industry news, captured by Nettesheim's market and industry indices, nor positive Halliburton-specific news would explain the company-specific drop in Halliburton stock on this day.	Nettesheim's analysis does not explain her conclusion regarding the October 4, 1999 disclosure. She claims the decline is due to partial disclosure of the alleged fraud related to the integration problems, but not a single one of the analyst reports or news stories surrounding this date refer to integration problems.
(2) Halliburton acknowledged that the decline in the price of	Halliburton described the reason for the decline in *expected profits*, not the

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
Halliburton stock was due in large part to the lower than expected profits of the joint ventures of Halliburton's engineering and construction units and many of the other business units of Dresser Equipment Group.	reason for the decline in the *stock price.*[83]
• January 5, 2000: (1) Nettesheim acknowledges that both culpable and non-culpable news was released on this date, but explains that the non-culpable news was industry-wide and thus was captured by her industry index and so could not have contributed to Halliburton's company-specific return.	She claims that the problems are in the E&C portion of Halliburton. She has done nothing to effectively control for changes in the E&C industry. See section V.C.2.a.

83. According to the Halliburton's press release on October 4, 1999: "The lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group are significantly affecting the company's 1999 third quarter earnings." [PR Newswire, October 4, 1999, Halliburton to Sell Two Joint Ventures, Announces Earnings Outlook]

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
(2) While she considered analyst reports, she also looked behind the Brown Brothers Harriman & Co. report to analyze the changes in the earnings per share estimate for different segments of Halliburton's business, and to determine which part of the news had the most effect on the analyst's model and Halliburton's stock price. This is precisely the type of "post-mortem" analysis endorsed by *Allegiance.*	She did not "look behind" the Brown Brothers Harriman report and she reports no analysis. The numbers presented in her report are merely a recitation of the numbers in the analyst report. See section V.C.3.a.
• October 24, 2000: (1) Defendants claim there was non-culpable, negative news released, but that news is not specific to Halliburton and so would not explain its company-specific stock return.	More importantly, there is no evidence that even the allegedly culpable information which Nettesheim claims is responsible for the entire price decline on October 25 was revealed to the market on October 24-25. The allegedly culpable news that she says is responsible relates to "serious

Appendix F

Plaintiff's Opposition to Motion to Strike the Nettesheim Report	
Plaintiff claims:	**Response:**
	operational problems" in Halliburton's construction business. We find no support for this claim in any of the analyst reports or news stories. (See section V.C.2.b.)

Appendix F

VII. RESPONSE TO SPECIFIC POINTS IN PLAINTIFF'S MOTION TO STRIKE FIRST ALLEN REPORT

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
A. Allen's Criticism of Nettesheim's Event Study Demonstrates a Fundamental Lack of Understanding of Nettesheim's Methodology. o As Nettesheim testified at her deposition, she began her analysis by reviewing the allegations of the Complaint to obtain an understanding of the allegations of misrepresentations and to identify dates with alleged partial disclosures.	Plaintiff misses the point. The point is not whether Nettesheim read the Complaint before performing her event study. The point is that Nettesheim ran 633 hypothesis tests and any day that she found to have a negative, statistically significant excess return she concluded was a partial corrective disclosure if, in her opinion, she found news related to the allegations.[84]

84. Q. What you did was you looked at every day during the class period and then determined which days had statistically significant returns, correct?

A. That's one of the many things that I did.

Q. An alternative approach would have been to look at the dates alleged in the complaint and determine if on those dates there was a statistically significant return?

A. It's not an approach that related to what I was doing. [Nettesheim Deposition, p. 41]

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
	This process, whether she read the Complaint before performing it or not, is an invalid process to perform hypothesis testing and it risks becoming a mere ex-post justification of a particular result. See the academic quotes in the First Allen Report.

A. I did not look at every Halliburton statement during the class period and then look to see whether or not the stock price went up.

Q. Sure. What you did was you looked at the dates in which there was a statistically significant return with a positive or negative, correct?

A. Correct [Nettesheim Deposition, p. 75]

Q. So how did you begin trying to ascertain the loss causation aspects of this case?

A. After collecting the data, then we did statistical analyses which entailed forming an industry index, and after several steps, went through to form the industry index and did a regression analysis to determine the relationship between Halliburton and the stock returns and returns on a market index, industry index. [Nettesheim Deposition as quoted in Nettesheim Rebuttal fn. 14]

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
o Indeed, Allen's misunderstanding of the Nettesheim Report may stem from the fact that Allen did not review the appendix to that report in which Nettesheim detailed her methodology. When asked whether she reviewed certain materials attached to the Nettesheim Report, Allen responded: "I don't believe she attached any material period to her report."	The First Allen Report demonstrates that Allen reviewed and analyzed Nettesheim's Appendix.[85] The statement that is taken out of context from my deposition is the following: Q. Were there any transcripts of analyst calls attached to the Nettesheim report in this case? A. I don't believe she attached any material, period, to her report. [Allen deposition transcripts, p. 31] From the context it is clear that I was referring to source documents, not material generated by Nettesheim. The five preceding pages of deposition transcript contain questions by counsel referring to source material.

85. For example, p. 8 and p. 11-12 of the First Allen Report include discussion of material contained in the Appendix of the Nettesheim Report.

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
B. Allen's Criticism of Nettesheim's Calculation of Statistical Significance Is Not Based in Sound Economic Theory o In her deposition, Allen admits that Nettesheim's use of the 95% statistical significance level is the commonly used and accepted confidence interval.	95% is a common standard to test statistical significance; the problem is with Nettesheim's methodology, not the 95%. See section V.E.1.
o Allen's claim that one would expect 5% of the days during the Class period to have a statistically significant return with a 95% confidence interval is true only if the control period is the same as the Class period.	Plaintiff and Nettesheim's discussion of this claim is inconsistent with fundamental statistical principles in hypothesis testing. (See section V.E.1.)

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
o Even assuming 31 days would be statistically significant as a result of "normal variations," Allen offers no explanation for why Nettesheim found those 31 days to frequently correlate with major news days.	The statement that major news days "frequently correlate" with statistically significant reactions is statistically nonsensical. There is no statistical analysis in either Nettesheim report to support this statement. It is a testable hypothesis whether the price moves differently on days with news than on days without news. Nettesheim has failed to show that the price moves differently on news days as compared with non news days. In fact, when Allen shows there is no statistical difference, Nettesheim says she never coded news versus non-news days. If she has not determined which days are news (or major news) then she cannot test whether the price movement on these

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
	days differs from other days.[86]
o Allen criticism of Nettesheim's use of the 95% confidence level is not supported by reference to any objective, independent authority.	Allen does not criticize using the 95% level, but rather the Nettesheim methodology. The First Allen report includes cites.[87] See also section V.E.1 of this report.

86. See fn. 2 for detail on the Polymedica order.

87. The First Allen Report contained the following cites:

Kaye, David H. and David A. Freedman, "Reference Guide on Statistics", *Reference Manual on Scientific Evidence,* (2000, Federal Judicial Center, Second Edition), p. 83-178;

Inge F. Goldstein and Martin Goldstein, *How Much Risk? A Guide to Understanding Environmental Health Hazards,* Oxford University Press, 2002; and,

Studenmund, A.H., *Using Econometrics: A Practical Guide,* Pearson Education, Inc., Fifth Edition, 2006, p. 114

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
C. Allen's Criticisms of Nettesheim's Industry Index Are Contrary to the Methodology Endorsed by Allen's Colleagues at NERA. o Allen levies several criticisms at Nettesheim's construction of an industry index, yet cites no authority for those criticisms.	There were cites in the First Allen Report.[88] In addition, Nettesheim's own cites also support Allen's criticisms.[89]

88. See First Allen Report p. 13: Peter Kennedy, *A Guide to Econometrics*, Fifth Edition, The MIT Press, 2003, p. 108-9, 383. See also First Allen Report p. 13: Michael A. Babyak, "What You See May Not Be What You Get: A Brief, Nontechnical Introduction to Overfitting in Regression-Type Models," Statistical Corner, *Psychosomatic Medicine*, Vol. 66, p. 411-421 (2004).

89. "First, the expert's failure to indicate whether he conducted an "event study" to determine whether the company's stock price was affected by company specific factors exclusive of the challenged fraud called into question the reliability of the expert's report." (p. 5 Eisenhofer, Jay W., Geoffrey C. Jarvis and James R. Banko, "Securities Fraud, Stock Price Valuation, and Loss Causation: Toward A Corporate Finance-Based Theory of Loss Causation," 59, *Business Lawyer*, p. 1419-1445, August 2004). See also section V.G of this report.

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
o Nettesheim's approach is endorsed by Tabak and Dunbar, Allen's NERA colleagues, as she used both theoretical measures and statistical measure.	Nettesheim approach is not supported by Tabak/ Dunbar. The article says selection should not be done blindly.[90] Nettesheim has made a selection that is blind to the nature of the allegations. E.g., her index does not control for E&C industry or asbestos environment.
o Nettesheim started her selection of companies to consider for the industry index by identifying those listed as competitors in analyst reports. This is the same initial step that Allen employed.	The step employed by Allen was to show that Nettesheim has not controlled for changes in the E&C industry. (See section V.C.2.a.)

90. See Tabak and Dunbar, p. 10.

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
o Nettesheim also looked at companies identified in the same industry index as Halliburton.	This did not adequately control for changes in the asbestos environment or the E&C industry and thus could not reliably test the allegations.
o These statistical measures are also endorsed by Tabak and Dunbar. o Allen's colleagues at NERA have criticized the failure to employ Nettesheim's methods.	Not true, the steps described in Tabak/ Dunbar are not the same as those used by Nettesheim's. The article does not support a procedure of looking at all statistically significant days and then looking for events. They mention the use of statistical measure, but, say, for example that "there are various reasons for not simply choosing the index with the strongest statistical properties."

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
o Allen, in constructing her "E&C" industry index, does not comply with the procedures endorsed by her NERA colleagues in that the statistical measure is entirely lacking.	The index in the Allen report is used to demonstrate that Nettesheim has not analyzed whether the price decline in Halliburton is related to problems overall in the E&C industry or to the alleged fraud. See section V.C.2.a.
D. Allen's Selection of a Post-Class Control Period Is Not Supported by Academic Literature.	Not true. The literature cited by Plaintiff and Nettesheim supports the use of a post-class control period.[91]

91. For example, the Marais and Schipper article cited by Ms. Nettesheim states that the control periods, both before and after the event period, can be used. [p. 23] Further, according to Tabak and Dunbar: "There are three general choices for the placement of an estimation window: before the event window, surrounding the event window, and after the event window." [p. 9]

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
o Allen's criticisms are based on a supposed "testing" of Nettesheim's model. However, Allen provides no explanation or methodology for how the testing was conducted. As such, there is no basis to test whether Allen's findings are accurate, and her results are not verifiable.	The First Allen Report explains how the testing was conducted [First Allen Report p. 13-14]. We used exactly the Nettesheim approach and merely changed the date of the control period. Nettesheim herself implicitly admits she is able to replicate and understand the test by repeating the test on other alternative control periods.
o Utilizing a post-class period contnrol period is contrary to academic literature, which recognizes that: In securities fraud cases, estimations [control] windows are often placed before the beginning of the alleged class period, . . . so that the estimation window would cover a "clean" period that could not have been tainted by	Not true. This is a complete mischaracterization of the article cited. "There are three general choices for the placement of an estimation window: before the event window, surrounding the event window, and after the event window. The most common choice is to place the estimation window before the event. The estimation window can also

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
any alleged stock price inflation.	be placed after the event windows or split to cover periods before and after the event window. When multiple events are studied, the estimation window may cover the periods around the event windows, include the period(s) between event windows." [Tabak and Dunbar, p. 9] Other academic literature cited by Plaintiff and Nettesheim also supports a post-event control period.[92]
o Allen acknowledged that the post-class period was not a better control period than the pre-class period utilized by Nettesheim.	The point is not which control period is better, but that the Nettesheim methodology is not reliable as evidenced by the fact that a change in the control period substantially changes the results.

92. See fn. 91.

Appendix F

Plaintiff's Motion to Strike First Allen Report	
Plaintiff claims:	**Response:**
E. *Allen's Renort Is Results-Oriented and Should Be Excluded.* o Allen did not perform a market efficiency analysis, prepare a proper industry index, or undertake a loss causation analysis in this case, all of which would be necessary to properly gauge Nettesheim's conclusions.	Allen was asked to review Nettesheim's loss causation analysis and found the Nettesheim methodology unreliable and methodologically flawed. Allen prepared a report which detailed her analysis and conclusions regarding the Nettesheim loss causation analysis. Nettesheim's methodology (looking at statistically significant days and then attempting to associate them with the alleged fraud) could be called results-oriented.

PROFESSIONAL BACKGROUND

Stanford Consulting Group, Inc.
Vice President

Economic consultant and testifying expert specializing in finance, intellectual property and insurance economics. Project experience includes:

Cost of capital and required underwriting margin analyses for property/casualty insurers in various states for use in regulatory hearings into appropriate insurer profitability levels in those states.

Study of economic market structure of workers' compensation insurance and analysis of various rating laws.

Analysis of economic damages alleged in numerous class actions as a result of alleged misrepresentation and fraud.

Analysis of economic damages suffered by parties to business litigation involving issues related to product liability, fraud, wrongful contract termination, unfair competition, and business valuation.

Numerous analyses of economic damages to various involved parties in wrongful death litigation, personal injury litigation, and wrongful termination litigation.

Study of auto physical damage and small group health insurance futures proposed for trading by the Chicago Board of Trade, including analysis of the impact of trading in insurance futures on auto and health insurance industry market structure.

Examination of financial structures of holding companies of savings and loan associations and investment portfolios of savings and loan associations.

Analysis of high-yield debt securities, including examination of financial statements, securities' prospectuses and related filings. Performed valuation analyses of below investment grade debt securities.

Analysis of lost revenues and profits in cases of alleged patent infringement and anti-competitive market behavior. Analyses included definition of relevant markets, examination of product differentiation, and appropriate allocation of costs.

Analysis of merger and acquisition issues of an attempted takeover by large foreign interests of foreign company which owns major U.S. property and casualty insurer, including analysis of risk of insurer's investment portfolio, consequences of the proposed altering of that portfolio into riskier stock and equity securities, and appropriate financial structure of an insurance company.

Development and application of economic theory and technology to calculate damages in several large securities litigation cases. The technology incorporates timing of information releases, materiality of information, class period, class certification, trading behavior, and extent of damages.

Numerous analyses of damages incurred by alleged environmental hazards incorporating past costs and estimates of future costs of maintaining and abating the hazard. Development of econometric models used to estimate change in real asset values due to presence of alleged environmental hazard.

University of San Francisco
Visiting Lecturer of Corporate Finance in M.B.A. program.

London Business School
Course Tutor for Executive Courses on Securities and International Finance. Involved in various consulting projects.

Applied option pricing theory in pricing interest rate swaps. Applied duration and immunization concepts to constructing and hedging a portfolio of interest rate swaps.

Performed cost of capital analysis for a very large and diversified corporation for use in estimating appropriate share price when privatized by the British government.

Analysis of the risk characteristics of an internationally diversified stock portfolio.

City University of London
Visiting Lecturer of Corporate Finance in M.B.A. program.

Institute of Monetary and Banking Studies, Geneva
Course Tutor for Executive Courses on Securities and Portfolio Management.

University of Hawaii
Visiting Lecturer of Managerial Economics, undergraduate.

Bank of Honolulu
Bank operations officer.

United Bank of Boulder
Bank operations supervisor.

EDUCATION

London Business School
Completed coursework requirements in program for Ph.D. in finance, 1986-89.

University of Hawaii
M.B.A., 1985.
Beta Gamma Sigma.

University of Colorado
B.A. in biology, 1978.

MONOGRAPHS

"Report on the Medical Malpractice Insurance Delivery System in Pennsylvania" with Hofflander, A.E. and Nye, B.F., 47 pp. (2001).

"White Paper – Small Group Health Insurance Futures," with Hofflander, A.E. and Nye, B.F. Chicago Board of Trade, Chicago, 75 pp. (1991).

"White Paper -- Auto Physical Damage Insurance Futures," with Hofflander, A.E., Nye, B.F. and Charlesworth, L.B. Chicago Board of Trade, Chicago, 92 pp. (1991).

PRESENTATIONS

"The Medical Malpractice Insurance Delivery System in Pennsylvania," with Alfred E. Hofflander. Presented in January 2002 in Harrisburg, PA.

"A Comparative Evaluation of Workers' Compensation Rating Laws," with Alfred E. Hofflander and Blaine F. Nye. Presented in August 1992 at the American Risk and Insurance Association Annual Meeting in Washington D.C..

"Hedging Risk with Small Group Health Insurance Futures," with Alfred E. Hofflander and Blaine F. Nye. Presented in June 1991 at the International Insurance Society in San Francisco, California.

"The Impact of Insurance Futures on the Insurance Cash Market," with Alfred E. Hofflander and Blaine F. Nye. Presented in April 1991 at the Risk Theory Seminar at Pennsylvania State University.

"From Three Flowers to Allstate: Evolution of Income Taxation of Captive Insurers," with Alfred E. Hofflander, Blaine F. Nye and M. Rose Kelly. Presented in August 1990 at the American Risk and Insurance Association Annual Meeting in Orlando, Florida.

Testimony of Jane D. Nettesheim

September 11, 2007
